1200. Desperately needed: License for HK0 San Andres

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-19 00:00:00 UTC
From: Peter Lemken <plemken@mail.hb.provi.de>
Message-ID: <3ujrgb$eqh@popcorn.hamburg.pop.de>
Source record: 242154

On very short notice I have decided to spend this year's holiday on San Andres/HK0. Having received information that a specific hotel would not mind ham activity there I am booked in there for three weeks.

I have sent two faxes to the "ministerio do comunicaciones" in Bogota requesting information on the licensing procedure, but, alas, they have not answered. I called them on the phone and they gave me a different fax number. This one I tried, too, but, again, no results. Today I send a copy of the faxes to the "liga de radioaficionados" and requested information on the licensing situation there. They answered back with a fax, asking me to send them a formal application, addressed to the ministerio, together with a copy of my passport and a copy of my German license (I live in Germany). After that, I heard no more from them, so maybe someone can help me with more detailed information:

- I will arrive in Bogota on Monday, July 24 and leave for San Andres in the evening of the next day. Can I risk to take along all my ham equipment, including TS930, antenna, laptop and various accessories (No, no microphone), or am I risking to get all the gear confiscated by the Colombian customs?

- Is there any realistic chance of obtaining a regular operation permit for Colombiy/San Andres in time? Would it make sense to go to the ministery with originals of my documents during this one day stopover? I don't speak Spanish, Aaaargh!

- Does anyone have information on how to obtain the license the easy, unbureaucratic way? Is "spending a little money on the right people" an option to be considered?

I am really lost on how to proceed. I was told that a regular application for a guest license would take around 2 months the least. Should I forgot the operation at all, or are there any secret holes? Would showing my US-General license be of any additional help or is a German Extra class just as good?

Anyway, I hope to get some input and maybe THE piece of information that still makes the dream of operating with a "rarer-than-DL-call-anyway" come true.

Operation will be CW only (if at all).

>"He's not a REAL Christian because blah blah blah."

Interesting, I didn't intend for it to become a religious arguement but
I do see your point now that you mention it. I was speaking from the
point of amateur radio when it first spawned.

>What is a TRUE amateur?

This depends on who you ask, so let me tell you a story (comfy now?)

In a beginning (please note this is not THE Beginning) there were Hobbists
and the Hobbists had boxes of electronic parts. Then the Hobbists said
let there be a radios. And thus the radio was born unto the Hobbists.
And the Hobbists saw that the radio was good. Then the Manufacterers
came out with neater electronic parts and thus the Hobbists made smaller
radios and so things were good for the Hobbists.

Soon the Manufacterers began to make radios and thus they made more money.
Before anyone knew what was going on the CB radio was born some of the
people wanted the CB radio.

Meanwhile the Hobbists became known as Amatuer Radio Operators. They looked
at the CB and saw that it was bad. They continued to work on their own
radios and made thier own antennaes and they were rewarded for their
efforts with gradification. For their fruits of labor yielded their own
reward. The Amatuer Radio Operators then called themselves HAMs and looked
down on the CBers and laughed. Some of the CBers tried to join the HAMs
but only some succeeded in ther efforts because of the dreaded monster...
Morse Code.

But the Manufacters began to grow. New Manufacterers arose and they then
decided that they can make radios better, faster, and even smaller. The
HAMs then began buying their radios from the Manufacterers. Some HAMs then
grew lazy and didn't build their radios. As time went on and the HAMs began

to die only to be replaced by HAMs who didn't know how to build a radio. A group HAMs realized that they were dying and in a last ditch effort to save their beloved hobby they did the only thing they could think of... they created the Tech No-Code. But the another group of Hams only known as the Old Ones, protested and warned their progeny that they will desecrate their beloved hobby. But their warnings were unheard. As soon as the Tech No-Code was let loose the Morse Code monster was beaten back... the Code monster was beaten, but not defeated. The CBers saw that the monster was gone and ran to the lands of that the HAMs called VHF, UHF, and the Land of Microwave. Many of the CBers didn't know how to build a radio, many of them didn't want to learn how so they continued to buy from the Manufacterers. The Old Ones looked at the CBers in disgust and some of them moved into the world of HF the same place where the Morse Code monster was forced to live it's days.

So who is the Amateurs? They all are. But who are the true Amateurs? I would have to say those who follow the path of the Old Ones.

I have no doubt there will be those that don't agree with my accessment, but then you go write your story :).

John

1204. TS-850S TX FAILURE

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-19 00:00:00 UTC
From: tom.alldread@minfox.com
Message-ID: <95071918202626444@minfox.com>
Source record: 242158

Greetings to All:

Recently my TS-850S developed an intermittent transmit failure.
After four attempts to diagnose the problem I have found that the DDS carrier unit which generates the RX BFO and SSB TX modulator carrier of approximately 455 KHz is failing during transmit.

When it fails the IC4 YM6631 chip output shifts to approximately 3 MHz during transmit as opposed to remaining near the required 455 KHz frequency.

According to the block diagram the IC4 DDS chip receives instructions from the main micro-processor which I presume sends commands to order the required frequencies for the USB, LSB, RTTY and CW modes. AT this point I do not know if the DDS chip is at fault or if it happens to be receiving the wrong commands from the micro-processor.

I have recently ordered a service manual which may provide additional information.

I have the following questions:

1) Does anyone know what the YM6631 is? The chips are stamped with the Kenwood name so I believe they may be custom made. If there is a generic replacement with data sheet information available that information would be most helpful.

2) Does anyone know the details of the microprocessor-DDS command communications? I believe it must be a form of serial communication probably sent on the PCK line to pin 61 designated SC(serial communications??). Possibly this data line which is commoned to all 4 carrier DDS chips uses a common micro-controller interface standard with addressing for the chip selection. I am able to capture some of the data with my storage scope but I need to know the pulse train addressing and data details to determine if the micro-processor or DDS chip is at fault.

3) When I called a parts supplier to find out the cost of a replacement carrier unit PCB I was told that they are currently on back order which may suggest that others have had similar failures. Has anyone encountered a similar problem with a TS-850S and if so what was replaced to correct the problem?

4) I wonder if anyone has had problems with solder joints or connectors with a TS-850S?

Thank you in advance for any helpful information regarding this problem.

For what it's worth, the multiple choice and fill in the blank tests require a passing score of 70%, but 1 minute's copy is only 20% of the text sent, and is often easier to pass. Remind your VE to count letters if you miss making 70% with the other grading method. You might be surprised to find you've passed.

Message-ID: <806176827snz@yorks.demon.co.uk>
Source record: 242165

Hello. Haven't taken one to italy, but EA8, VE, VK etc and had no bother.
The regs as they are here suggest you need:
1 A copy of your licence validation.
2 A copy of your country's licensing conditions.
3 A copy of Italian licensing conditions.

I would add to that: the receipt for the rig to prove where you bought it!
Some countries are a bit touchy about extended coverage rigs, as well.
Hope of use to you and don't forget to take a mains adapter for your charger!

: satellite subband (29.300-29.500). This is set aside for
: space satellite downlinks. Two hams were on 29.303 talking

Don't forget the satellite *uplink* for RS-12 which is in the 15 meter band (21.210 - 21.250). It's hard enough to coordinate up and down links, with doppler thrown in, just to get on the bird. Finding an open spot on the uplink that corresponds to an open spot on the downlink *simultaneously* can become quite frustrating if there are in-band QSOs in progress on these frequencies.

Greg KO6TH

p.s. Remember, on RS-12, you track doppler with the *receiver*.

This is a good opportunity to remind the readers that the Vibroplex
Company is still in business and sales the semi-automatic mechanical
keyers are brisk. Vibroplex is now under ownership by a ham, and
the operation has moved to GA.

I believe the company is over 100 years old - they're they only
ham supplier that can make that claim.

I got my callsign off the server late last night. It is KC5PSX. I went
ahead and bought the Icom too. It seems to have a very good front end in
it. I live in the Houston Tx, Clear Lake area and haven't noticed any
intermod at all. This was a concern as this is a very heavily populated
area.
I am still learning to use the radio and haven't actually talked to much
(shy) but that will come with time.

Thanks for the reply and will look foward to more.

Lewis Stephens KC5PSX

I agree that the best way to get your speed up is to use code on the air.

I used a hand key for a long time. It held up my *sending*, but not my
receiving, and that was just mechanical. I still enjoy a good hand key.
I can use an iambic keyer and have on occasion, but my weapon of choice
is either a hand key or semiautomatic key (bug, such as Vibroplex).
They're a lot of fun when you get the hang of how they work and can get
the rhythm down. (No, I'm not 75 years old, I'm only 22, so you can't say
that it's because I'm "old and set in my ways." You can say I'm young and
set in my ways if you like; I got my license at 14, used a hand key for
years before I got my first keyer, which I didn't like much, so I went
back to a hand key, and then I got a bug, which I enjoyed immensely. And
from the time I got my Novice at 14, to now, as an Extra, I've always
thoroughly enjoyed cw, even as a 20-wpm Novice, which I was for a month.
Ask any of the Austin hams about my cw fanaticism if you like. :))

Our club recently inherited some VHF ACSB Transceivers made by Sideband
echnology Inc., out of Scottsville New York.

A posting a few months back resulted in quite a bit of interesting and much
appreciated information.

In following up on this I am unable to locate Sideband Technology Inc.

I was wondering if anybody could help me out with further contacts, or
more specifically, any documentation on the ACSB Pioneer 1000 Transceiver.

Thanks in advance.

>right. Mixing up my c's & y's. Thinking h's were 5's. Oh well...
>P.S. Tell me your CW sob stories to help cheer me up !

Just stick with it and you'll eventually succeed. When I did my 5wpm, I used SuperMorse and took the sample tests until I felt I could answer them properly. Once I had my Tech+ ticket, I started to set up my HF station. I dwelled on 10m phone for a few months till I decided I was ready to proceed (and the fact that 10meters was getting worse by the day helped in making this decision!). I worked my speed back up to 5 again with a week of practice, then went on the air on 40 and 80 meters in the novice sections. The best way I found to build my speed and copy ability was in live QSO with another person. I tried to make at least 1 QSO per night. In about 6 weeks I felt I was ready for the 13wpm test. I went to the next VE session I could find and failed the test (6 out of 10). I relaxed for a few minutes, took a deep breath, took the test again, and passed with 8 out of 10.

It's worth the effort, and the feeling you get when you pass a code test is unbelievable! It's not the same feeling you get when you pass a written exam. It's a real feeling of accomplishment - not to be missed.

Good Luck

I want to install a Larson KG series glass mount antenna on my 1989 Ford Probe. The instruction sheet that that came with the Larson states "Do not install on glass with metallic content (passivated glass i.e. "solar-coat", "solar-cool")." On the window I want to mount the antenna on, it says "Carlite SUN-X AS2". I talked with the nice folks at Larson and they didn't have any info (good or bad) on SUN-X. Does anyone have any experience here?

Here's a few that should work for you:
145.31- Herndon
145.35- Waldorf
145.47- Arlington
146.61- P.G. County
146.625- Arlington
146.665- Mt. Vernon
146.685- Vienna
146.76- Laurel
146.79- Fairfax
146.91- Tysons Corner
146.955- Rockville
147.15+ Cheltenham (?)
147.21+ Mclean (AMRAD)
147.24+ Woodbridge
147.3+ Bluemont

You can get on some of these with no problems. If you need more
info or more repeaters let me know.

Help!!!

I am looking at new dual band HT's and need info on them.

I have read QST for info on the Yeasu FT-530, FT-51,
Kenwood TH-79A(D), and Icom IC-Z1A.

If you have any of these radios please post here or mail me.
I would like to know what you think of the radio,
features, costs of extra items and the ability to do
the out of band mods.

Hah, I've done that. Once you get the hang of it, it *is* easier
and faster than a regular straight key. Trying to master an electronic
key drove me to distraction, but these cootie keyers are easy to use.
I think my element timing was better than with a straight key too.
I still have a "swing", which is probably why I could never keep that
blasted electronic keyer from adding or subtracting an element from
time to time.

>
>Whoever it is who's selling them, of course!

Flippant, but functionally accurate. As far as we know, the "aether"
is inexhaustable, and using it doesn't wear it out. So it's not like
ordinary property in that regard. I must say, however, that in Oz
they have a "spectrum maintenance fee", so they must think the aether
can develop potholes and needs repair from time to time.

Under the common heritage of mankind doctrine, we hold the spectrum in
common as mutual owners. Under natural law, we have an inalienable right
to access to spectrum. But licenses aren't rights, they are a form of
protection racket where those with the guns make demands on us in order
for us to be granted "protection" from their thugs coming in and busting
up our stations and seizing our bodies if we use the spectrum. Governments
have no rights to grant, they only have force.

We allow government to infringe our rights in this way because we
value order more than we do freedom, because we are cowards, or
because regulation can make things work more smoothly for us. Only
the latter case is ethical.

This has changed several times, so it can be confusing. When I
upgraded, you could keep your previous call or request a new
call be sequentially assigned from one of the callsign blocks
your license class qualified you to hold. For me as an Advanced,
I could check, keep present call, block B, block C. or block D.
I couldn't pick block A because that was only available to Extras,
but I could pick block C or D if I didn't want a 2x2 call from block
B. I don't know when that practice stopped.

The ARRL has new license guides out for the General and Advanced classes
(and will probably have one for Extra when the pool changes next year).
These are along the lines of NYT, with good explanations, using the questions
as a 'test yourself' at the end of each chapter/section. Much better than
the 'just memorize and don't ask why' books from Rat Shack. I'm using
the General book right now for a class that I am teaching.

SB SPCL ARL ARLX031
ARLX031 Ham Radio and More guests

On Sunday, July 23, 1995, the 1995 Dayton Hamvention Amateur of the Year, Rosalie White, WA1STO, and Amateur Radio Newsline Young Amateur of the Year Adam Weyhaupt, N9MEZ, will be the guests on the Ham Radio and More Show.

Find out what Rosalie and Adam have done to get these prestigious awards. Also, learn how youth activities are becoming more widespread in Amateur Radio. Have your youngsters listen to find out how they can become hams, too.

Ham Radio and More airs at 6 PM Eastern Time (2200 UTC), on Sundays. The show is carried live on the national Talk America Radio Network, and also on TVRO, Spacenet 3, transponder 9, 6.8 audio, as well as being broadcast later, worldwide, on WWCR shortwave, 7.435mhz, on Mondays at 0400 UTC and again at 0900 UTC.

The toll free call-in line is 1-800-298-TALK.

For more information, connect to the home page, courtesy of the Boston Amateur Radio Club, at http://www.acs.oakland.edu/barc/ham-more.html. More information also was in August 1995 QST on page 81.

Lewis (Waiting)-

Congratulations, Lewis. Remember that you can ftp to the FCC and
check on the status of your application. They update daily, e.g.

ftp://ftp.fcc.gov/pub/XFS_AlphaTest/amateur/friday.zip

On the radio, I have one and would recommend it highly. There are
a couple of drawbacks. The buttons are too small. The antenna that
comes with the radio is too tight to the case, and if you have the
rubber plug cover flange doohickey in place, the BNC connector on
the radio can come loose. These drawbacks in no way diminish the
good value of the radio, in my opinion. There is also a review in
QST from about a year ago, I'm sorry, I don't remember the date, but
the IC-W21AT is right on the cover.

If you get this radio, please stay in touch.

>Maybe he just wanted a 1x3, it is a more traditional call form, even
>if it does start with N instead of K.

Incorrect.

First: The Buffalo callbook server (out-of-date, but for this particular
call it's irrelevant) says that N5JNX was previously Advanced.

As to an Extra class licensee choosing a call from any call block, this
is only true under the new vanity callsign rules, which will possibly
take effect someday. The issuing of call letters works like this:

Novices get 2x3 calls.
Tech/General get 1x3 calls, until they run out, and then they get 2x3 calls.
Advanced get 2x2 calls, until they run out, at which point they get the
next-lower block available.
Extras get 2x1, 1x2, and 2x2 beginning with AA-AK, until these run out,
and then they also get the next-lower available group.

Someone who upgrades may elect to keep a previous call after upgrading.
However, if the upgrading ham chooses to change his/her call, the new
call will come from the group of calls for that license class. For
example, a General with a Novice call will upgrade to Advanced and change
his call, so he will get a 2x2 call. Or, a Novice upgrading to Tech will
get a 1x3 call, unless all the 1x3's are gone, in which case the novice
will get a new 2x3 call.

Also, if a ham moves and chooses to change his call to reflect a new call
area, the new call will likewise come from the block of calls appropriate
to that license class. So, an Advanced licensee will get a 2x2 call, for
example, or an Extra will (nowadays) get a 2x2 beginning with A.

This of course doesn't apply in Alaska, Hawaii, Puerto Rico, the Virgin
Islands, and them other KH and KP prefixes. Well, it does, but the call
blocks are different: 2x3's are novice; 2x2's are tech/general; 2x2
beginning with A are advanced, and 2x1 are Extra. The call-issuing system
after that works the same, of course.

I try to know these kinds of things. I like this kind of information,
actually. This is to the best of my knowledge entirely accurate.

By the way, if anyone knows the history of how call letters were issued pre-1977 (which is, I think, when this system began--if someone knows the exact year, please tell me, as I'd be interested), please pass this info along, as I'd be interested for trivia's sake. Also, info on how calls are issued in non-U.S. countries would be interesting to me. (I know, I'm weird--who'd be interested in such a thing?)

>That's an interesting concept, who owns the airwaves anyway????

Like public highways and roadways, the "public" owns radio spectrum. And like public highways and roadways, you must be licensed to operate a transmitter in the spectrum just like you need a license to drive a car. While there may be few that disagree, anytime you are doing something that requires a license, you are exercising a privilege, not a right.

However, just because something is considered a "privlege", your license should be held over your head in connection with matters unrelated to those privleges.

An ex-felon should not be denied an amateur license just because he is an ex-felon. If that person was convicted of a felony involving telecommunications it might be a different story - like someone who is convicted of long distance toll fraud. But just because someone did time for writting bad checks, it should not preclude him from being an amatuer.

>>>> ...., the F.C.C. believes that it has the right to deny any
>>>> citizen a license if they believe he or she has shown disregard
>>>> for any law.

The FCC really doesn't have the "right" to do anything based on their BELIEF that someone did anything outside the commission's jusridiction, (IMO). But I think the above was taken out of context. I forgot the guy's call, but I believe this story is related to actions against an amateur that was convicted of stealing and using (or selling, or something) long distance access codes and defrauding common carriers. This is related to amateur radio as a telecommunications issue. It is not unreasonable to consider this issue when renewing a license. It's like suspending a pilot's certificate to fly planes because of drunk driving convictions - it is reasonable to CONSIDER the connections.

Hi David,
Regarding your question about amateur operation while
visiting Canada; I made a couple of calls to confirm the situation
as seen by authorities on this side of the border. First of all,
operating; a reciprocal agreement is in place between the U.S.
and Canada to the effect that a "permission to operate" form is
no longer required. Advice from the local Department of Communications
office (now called Industry Canada due to government cost cutting
measures but that's another story!) is that you carry your ORIGINAL
license and be sure to ID as being portable or mobile VE7 (or whatever
call district that you are in) while in Canada. (ie KB7ZJY/VE7)

Second concern for you is with the customs guys at the border. Be SURE
to regisiter your radio gear BEFORE you cross the border. The form that
you fill out will be your proof that the radio(s) were not purchased
while out of the country. Get this form either at your local customs
office or at the border (US side!).

By the way, I also tried to verify all of this from the U.S.
point of view by calling the U.S Embassy here in Ottawa. I was defeated
by the most ingeniously complex nested audio menu that I have ever
encountered on the phone! After about four levels of "If you would like
to talk to....., press 1 (2, 3, 4, 5, etc) now.", I was referred
on to a 1-900 number that was going to cost me. I declined since I
still had no idea of who to call for Amateur Rasdio concerns!! Maybe
you could achieve better results locally.

In any case, I hope this helps you at least a little David. Have
a nice trip through "VE-land".

The "Honor Roll" is mostly people with amplifiers, towers, and beams. To those folks, the advantages of CW matter much less. Also, many DXers and contesters prefer phone because the QSOs/minute rate is higher.

I have a mixed mode DXCC, and I've never run more than 100 watts to a dipole or vertical. My QSOs are about evenly divided between CW and phone. But a lot of my very long distance and polar path QSOs are on CW.

I once read that the apparent difference between CW and phone is a couple of S-units. That is, under equal conditions, a skilled operator will be able to copy a CW signal about 2 S-units lower than the level at which a phone signal becomes unusable. Also, I've read in several DXers books and articles that the competitive difference between a high and medium power/antenna gain station is less on CW than phone.

Again, my own experience confirms all this. Many times, I've tried to work an area of the world and not been able to break a pileup or hold a QSO on phone. When I switch to CW, no problem.

All this makes perfect sense. On SSB, your power is spread over ~2.1 kHz in a complex analog waveform. On CW, it's all concentrated in a single frequency wave that is either on or off. CW is just a human-readable digital mode with a low data rate.

For the "big guns," the choice between phone and CW is more a matter of which game to play, unless conditions are bad. For people with modest stations, CW has many advantages over phone.

David,

I get up to Canada a lot it it is fully reciprocal. You just
operate with your usual US privileges. There is some discussion
about signing what I do is give my call and "mobile VE7 or VK1"
or what ever is appropriate. On CW you do the same with the slant bar.
Generally the Canadians are a friendly lot and I have never found a
closed repeater or net when operating there. Have a good trip.

Hi Dave. Canada & the US have a reciprocal license agreement
where your license is good up here without any special permits
needed. Just sign YOUR CALL/VE7, or what ever the prefix is
for the province you're visiting. They are VE7 for BC, VE6 for
Alberta, VE5 Saskatchewan, VE4 Manitoba, VE3 Ontario, VE2 Quebec....
When you cross the border you may want to check with your customs
on the way up or they may try to charge you duty on that Japanese
radio when you try to cross back.

Hi all,

I just became active again after being off the air for about ten years, my old call was WB3FOG and since I let the call lapse my new call as of 1989 is KD3FZ. I am a student and am interested in getting ivolved in HF again. As a teen and into my early 20's I was very active working over 300 countries getting my 5 band WAS and was a huge contester. I am looking for a used HF rig so I can get active again. Of course the bug has hit again at a time when I rally cannot afford a new rig. I am a student majoring in Information Systems Management in the Baltimore area. If anyone can help please feel free to drop me a line via email or here on this group.

Thanks lou@charm.net

1254. CW an advantage for DXCC?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-20 00:00:00 UTC
From: ylshih@alumni.caltech.edu
Message-ID: <3ul06n$8fn@gap.cco.caltech.edu>
Source record: 242063

I noticed a statistical anomaly for which I am looking for an explanation which makes sense. The answer is perhaps obvious to contesters, DXers, or long-time hams, but I am none of the above.

It has been stated by pro-CWers that "code gets through when all else fails". This is apparently intended to mean (1) that you can send code with almost nothing in the way of equipment, and (2) that code is perceivable and understandable when other transmission modes are lost in QRM/QRN. Now, with regard to the second meaning, in the latest DXCC honor roll listings in QST, I noticed that the longest listings are for mixed mode. However, the phone-only listings run about 18 columns and the CW-only listings run about 6 columns. The peak country count appears about the same, that is 320-330 between mixed, phone, and CW.

Since all DXCCers operate on HF bands, they must know CW to at least 5WPM and so they are all capable of using CW if needed. If "code gets through ..." then wouldn't there be more honor roll operators on CW-only than phone-only? Or is it a question of the percentage that succeed at honor roll with respect to the raw pool of achievers that wish to restrict themselves to that type of operating mode? That is, many more hams want to operate phone-only than CW-only, and so as a percentage of the raw pools, 6 columns represents an equal or greater succes rate than 18 columns. But shouldn't rational hams that are committing untold hours to shooting for an award choose the method that will give them the highest chance of reaching that award most quickly, i.e. CW (under the "code gets through..." thesis)? And shouldn't the elusive countries be easier to get with CW, so shouldn't the peak country count show some more disparity?

I'm not trying to re-ignite the code-wars, I'm really curious as to how the stated statistics correlate with the stated benefit of CW, so please try to answer in that spirit.

Yes. "Traffic"--messages, usually for other people--that you'd
collected for later transmission were said to be "on the hook," and
sending them all would be "clearing the hook." It's quite possible
that this usage predates radiocommunication; it could have come to us
from the landline telegraphers, who had several decades of clearing
the hook before the rise of radio.

DX Bulletin 39 ARLD039
From ARRL Headquarters
Newington CT July 20, 1995
To all radio amateurs

SB DX ARL ARLD039
ARLD039 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, The OPDX Bulletin, Bob, WB2YQH, The 599 DX Report, The Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

SVALBARD, JW. Listen for Dominik, DL5EBE, who will sign JW0K until around August 10. He is a member of a scientific expedition and will be on the air during his spare time.

ETHIOPIA, ET. ET3AA frequents 14224 kHz around 0200z. QSL via POB 60258, Addis Ababa. On CW, look for ET3YU at the low end of 20 meters around 2230z. QSL via YU1FW.

LEBANON, OD. OK1EE/OD5 should be active until August 12. He has been heard on 14010 and 7003 kHz between 0200 and 0300z. Most of his operating is on CW. QSL via OK1FMR.

CAMEROON, TJ. Last call to work Jim, TJ1JB. Listen around 14030 kHz between 1900 and 2000z. Jim's QSL Manager, Ken, KE9A, reports Jim will be shutting down TJ1JB within the next couple of weeks and returning to the USA.

LIBYA, 5A. A station signing 5A1A has been active around 14202 kHz between 2230 and 0230z, 21020 kHz at 1715z and 28015 kHz at 2035z. This operation is supposed to be that of Toly, UT3UY, and company. It is uncertain exactly where 5A1A is operating from.

BAHRAIN, A9. Adam, A92MM, has been active on 20 meter SSB. QSL him at Box 116, Manama, Bahrain.

INDONESIA, YB. Jack, YB2ARW, is active weekends on 17 and 20 meters around 0700z, looking for the West Coast. He is also QRV daily on 20 meters around 1200z.

BERMUDA, VP9. G3AVJ/VP9 will be active during afternoons and early evenings until July 26. QSL via his home call.

ST. PAUL ISLAND, CY9. Ron, AA4VK, Murray, WA4DAN, Bob, KW2P, Bill, K4TVE and Vance, W5IJU, will be active from July 27 until August 2. They will sign their home calls /CY9. Operations will be on CW, SSB and RTTY, 160 through 6 meters and the satellites. Look for their CW on 1830, 3505, 7005, 10105, 14020, 18075, 21020, 24900 and 28020 kHz. For SSB try 3790, 7090, 14195, 18120, 21295, 24940, 28395 and 50120 kHz. And on RTTY check out 7085, 14080, 21080 and 28080 kHz.

THIS WEEKEND ON THE RADIO. The SEANET Contest, CW, sponsored by the Radio Amateur Society of Thailand, runs from 0000z July 22 until 2400z July 23. Exchange signal report and serial number starting with 001. See July QST, page 114, for more information.

1260. Glass Mount Antenna on '89 Ford Probe

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-20 00:00:00 UTC
From: novotny@nosc.mil
Message-ID: <1995Jul20.205201.19593@nosc.mil>
Source record: 242069

I have a 1989 Ford Probe that I want to install a Larson KG series glass mount antenna on. The Larson directions say "Do not install on glass with metallic content (passivated glass i.e."solar-coat", "solar-cool")." The window where I want to install the antenna says "Carlite SUN-X AS2". I talked to the nice folks at Larson and this was not on their list of good or bad windows. Does anyone have any experience installing glass mount antennas on a Probe?

It came from the old telegraph operator days, when traffic to be sent
was "spiked" onto a wire hook next to the operator's desk. When the
last message was sent, the hook was "cleared."

Repeaters in that area are usually owned by clubs (like JPL, CalTech,
Downey ARC, etc.). You should join one of the clubs that has
repeaters, and talk with the "repeater trustee". (I used to be a
member of the JPL ARC (Amateur Radio Club and the Downey ARC).
Good luck.

1265. Special Event Station WW2END

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-20 00:00:00 UTC
From: treit@seanet.com
Message-ID: <treit.268.000FEB0A@seanet.com>
Source record: 242074

Hello!

I thought I might take the time to once again mention the upcoming special event onboard the USS Missouri, September 1st and 2nd.

The purpose of the event is to commemorate the signing of the Japanese surrender onboard the Missouri 50 years ago this September, an event which officially ended World War II. Our desire is to remember all of those who gave their lives in that tragic war, and to celebrate the continuing peace that has been maintained throughout the years.

A 50 year anniversery is a once in a lifetime event, and we have every intention of doing this in style. With HF operation on both CW and SSB, plus VHF/UHF, packet, satellite and more, we are going to be handing out contacts throughout the amateur spectrum as WW2END.

Don't miss this once in a lifetime opportunity! Everyone who contacts WW2END is eligible for a handsome certificate that can be proudly displayed for years to come.

We will actually be operating from onboard the deck of the USS Missouri, currently located at the Bremerton Naval Shipyard, in Bremerton, WA. Keep an eye out for future postings here, as well as additional information in the September QST. Operating frequencies will be listed soon.

Additional inquiries can be made to Tom Sanders, the project chairman, at WW2END@aol.com. Since Tom is a busy individual, you might also direct question or comments to myself at treit@seanet.com.

I hope to contact all of you from the Missouri!

73's

-Mike Treit KB7QOP

I thought that the FCC allowed SSB phone on 10-meters from
28.3 to 29.7. Does the FCC restrict 29.3-29.5 to satellite contact only??
Are there other FCC restrictions?

1267. Grid Square Problem

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-20 00:00:00 UTC
From: ac382@ccn.cs.dal.ca
Message-ID: <DC0wyv.6xC@cs.dal.ca>
Source record: 242076

Howdy all:

I recently bought a copy of The ARRL World Grid Locator Atlas (1984), and found a small problem. I know my station's latitude and longitude, and when I use the locator atlas I find I'm in grid square FN84. So far so good.

When I use the sub-square locator tables on the inside of the front cover, following the directions, I find I'm in sub-square FN84FQ. Again, so far, so good. I even went so far as to confirm this by laying out on paper a grid of the sub-squares of FN84, put the latitudes and longitudes on the appropriate lines, and labeled the squares as prescribed in the Atlas, from AA to XX, south to north, then west to east. Again, I find I'm in FN84FQ.

The problem comes with the BASIC program listed on the inside of the front cover. It doesn't give the correct sub-square. It always says my sub-square is FN84SQ. I found another known station's geographical coordinates, and using the sub-square table and my own paper grid, found the second station's sub-square to be FN84EL. When using the BASIC program as listed in the Atlas, this station's coordinates produce FN84TL instead of the correct FN84EL. I have noticed that in both cases the incorrect sub-square is a mirror-image of the correct one; if I put a mark on the correct and incorrect sub-squares of each station, and then fold the paper grid down the middle, the two sets of correct and incorrect squares come together. Only the longitude of the sub-squares seems to be incorrect, and the latitude is all right.

I'm not in the least fluent in BASIC. Has anyone else had this problem, and if so, what do I need to change in the program to make it give me the correct sub-squares?

Also, what can I change to obviate having to enter my longitude as a negative quantity?

Robert N. Ward, VE1HN
FN84FQ. Really.

I do not have an 11 I have a 41 and a 51. They are great radios. I wanted
to comment about the software that Joe mentioned. I just purchased it, and
so far it is great. I moved all the memories from my 51 UHF side to my 41.
GREAT. The software is MS Windows based and comes with a cable. Well
worth the $40 I spent.

The organization is Southeastern Repeater Association (SERA).

They publish the SERA Repeater Journal.

Their address is: SERA
PO BOX 215
Tobaccoville, NC 27050

Associate membership (reapeater USER) is $8.00 per year, and you get 4
quarterly issues of the Journal.
Full membership (repeater owner) is $20.00 per year.
SERA Is the repeater frequency coordinator for NC,SC,KY,MI,TN,WV,VA, and GA.
Their Journal is WELL WORTH the $8.00 per year! The repeater listings are
the most accurate I have found.

Source record: 242084

Last Thursday night I tested for and passed my No-Code Technician as
a starting point. I want to keep going and gain (hopefully) the
Advanced or Extra level. My question is this: I have SuperMorse, and
my intention is to skip 5- and 13-WPM and learn CW at 20-WPM. That way,
I just have the written Mult-choice tests to do. Is this feasible?
Should I start with 5- or 13-WPM, or can I learn at the upper speed?
Any comments/suggestions/etc. would be greatly appreciated so I don't
go up in flames. I have been trying to learn now for a week at 20 WPM.
I am unsure (as I am new) how my progress is so far.
Thank you for your help.

>"He's not a REAL Christian because blah blah blah."
>What is a TRUE amateur?

Gee Phil, I started this thread by simply asking why hams appear to
be dependent upon the manufacturers (someone said that 220 activity
is low due to few commercially-made radios available). My suggestion
was to build a piece of gear instead of lamenting the low-availability
of a manufactured unit. At no time did I nor any of the respondents
come close to a "religious argument". Rather, one said no one is
building any more and I responded that the magazines are still
providing constructions articles month after month and that
technical books sales are still brisk.

Part 97.1 does `encourage' us to be technically inclined, which
comes about through building.

Note to John: "Majority of hams"?? I never said that - never made
mention of the number - only that there are still folks building.

>Don't forget the satellite *uplink* for RS-12 which is in the 15 meter band
>(21.210 - 21.250).

Hi,

That's even worse. What's the point in having a satellite uplink
in a band where DX-QSO's can proceed without the help of repeaters?

Why not shift the satelite uplink to 20 or 40 meters, than we could easily
access it from any part of the world?

I've recently taken over as repeater keeper of GB3OH, the 70cm repeated located in East Central
Scotland.

The box seems to be working OK, apart from one small problem (and in dire need of a tune-up!).

As part of a club project for a group within the Falkirk Amateur Radio Club, we're intending to get
this repeater back on the air soon, but we lack any information on the system. The TX and RX
sections aren't too much of a problem, but we'd like to get some info on the logic.

It's discrete logic (no processor), and as far as we can tell, of a 1979 vintage. I know the logic
is a copy of some used somewhere in England, so it's not unique to 'OH, although it is possible
the original constructors of 'OH (now slient key) did modify it slightly.

The logic board is about 9 inches square, with a large PCB edge connector to the rear. There are
several presets located up the left hand edge of the board. By trial and error, we've determined
some of the functions of these presets, but we're still trying to figure out the others.

Does anyone have diagrams or any information on something this old? If you have, please email me here, or wilson_jo@grpr21.dnet.bp.com.

In the long term, we're hoping to revame the whole system, but as it seems to be working quite
well just now, we intend to get the box back on the air as it is.

A date for your diaries: 8th October 1995, from 11:00 to 16:30, the Falkirk Amateur Radio Club
will be holding a junk sale in the Scout hall in Grangemouth. Morse tests will be available.
Some of the proceeds of this sale will go towards the upgrading of GB3OH. Further details from myself at the above address.

John.

Sort of. Data base says he's about 15 years old and been a ham for
about 9 months. Congrats on being a ham, Rodney.

Rodney, contact the person whos call sign is sent by the repeater, if
it is a persons call. Tell him you wanna be a control op and are
willing to learn. He will most likely tell you the kind of things
you should be listening for, and suggest that you spend a few months or
a year practicing listening for those things. By that time, if you
still want to be a control op, it will not appear as a passing thing
for you, and you will be considered more seriously for the position.

73 and good luck.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z JULY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 JULY AND FORECAST FOR 21 JULY - 23 JULY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 19 Jul
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Jul 22 Jul 23 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Jul: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 19 Jul
Learmonth 8 2223 2222
Fredericksburg 10 9
Planetary 10 11

Observed Kp for 19 Jul: 2333 2233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
21 Jul 8 Quiet to unsettled
22 Jul 13 Unsettled
23 Jul 16 Unsettled to active
COMMENT: A mild increase in geomagnetic activity is expected on 23
July, due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Jul normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Jul normal normal fair
22 Jul normal normal fair
23 Jul normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
20 Jul 8 near predicted monthly values

Predicted Monthly T index for July: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
21 Jul 15 Near predicted monthly values
22 Jul 15 Near predicted monthly values
23 Jul 15 Near predicted monthly values
COMMENT: Degraded HF conditions may have been experienced
yesterday.Darwin MUFs: 10-15% depressed most of the UT day.
Townsville MUFs: near predicted monthly values, spread F observed
during local night.
Hobart MUFs: 10-15% depressed at times, sporadic E blanketing
observed most of local night.

1286. Re: CW an advantage for DXCC?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-20 00:00:00 UTC
From: moritz@ipers1.e-technik.uni-stuttgart.de
Message-ID: <3ulf4r$1qqi@info4.rus.uni-stuttgart.de>
Source record: 242179

Well,

First the fact that CW gets through when all else fails,
is so obvious, that you should not question it on the grounds
of the DXCC statistics.

Try another list: the number of successfull EME contacts
done with CW and and those with SSB. And there are surely a large
number of no-code licensees who would like to have a go.

The Honors Roll is surely biased towards the better equipped
stations, to whom the low-signal capabilities of CW are not so very
important.

Another reason might be (not sure here) that DX station tend to prefer
phone, since it is easier to maintain a high QSO rate.

IF you do not believe it, try for youself: Go to a rare country
and call CQ wit 50 or 100 W and a small antenna. Unless condx. are
really favorable, no one will hear you on phone, while you can at
the same time work quite happily on CW. However, as soon as you
get to use an amplifier, things change dramatically: No problem
to blast a hole into the general QRM and run your phone pileup.

>That's even worse. What's the point in having a satellite uplink
>in a band where DX-QSO's can proceed without the help of repeaters?

Remember that the satellite is *above* the ionosphere. For a signal
to reach it, or get back down, the frequency used must be above the
current critical frequency for that ray angle. So satellite contacts
and ionospherically propagated contacts between two points normally
can't occur at the same time. The transponder can be viewed as an
artificial ionosphere for those times the natural ionosphere won't
sustain the path.

Interesting propagation situations can occur when the satellite
operating frequency is near the critical frequency. Ray injection
angles can be non-reciprocal, leading to the generation of otherwise
unsupportable ionospheric paths. Non-Great Circle paths are also
possible with the aid of the satellite.

>Why not shift the satelite uplink to 20 or 40 meters, than we could easily
>access it from any part of the world?

20 might be usable at some times, but it's unlikely the critical
frequency will drop low enough to make 40 usable except in rare
situations (when the F layer won't support 40, the D layer is likely
to be dense enough to still prevent signals from reaching the
satellite over that ray path).

The main reason the RS birds have used HF frequencies is that most
ex-Soviet amateurs only have HF equipment. A secondary reason is to
explore the interesting propagation possibilities when the satellite
frequency is near the critical frequency. Both mode A and mode K
birds have highlighted some previously unknown propagation quirks
due to injecting the signal into the ionosphere from the "back"
side from the receiver's perspective.

Message-ID: <4JgJ9c3w165w@angus.mystery.com>
Source record: 242185

Hi,
My CAT 300DX repeater controller requires <.8 and > 3 volts for the
COR. My Icom repeater docs state its COR pin: squelch open: less than
0.3 V/5 mA, squelched closed: more than 6.0 V/100 uA. When I hookup
my volt meter without a load I get .003V when the squelch is open
and .134V when closed. I think I need a pullup resistor but when
I hooked up a 10K in series to the CAT I received .001 volts... Can
someone please give me (a tech-lite) a little advice!
Thanks - Chris N8UDK

1293. This Week in Amateur Radio #121 (for air through 7/28/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-21 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <JLEjBgH.sanderman@delphi.com>
Source record: 241936

Here is a summary of news items covered on edition #121 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 28-Jul:

-

1. ARRL Files Comments in Response to the Latest FCC NPRM
2. New Overland Distance Record Set on 3456 MHz Band
3. Discovery Crew Members Activate SAREX Early in STS-70 Mission
4. Personal Computers Squeeze Out Last US typewriter Manufacturer
5. MIR Cosmonauts Ask Amateurs to Limit Use of Packet BBS
6. "The RAIN Dial-up" from Chicago
7. Weekly Propagation Forecast with George Bowen, N2LQS
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. Upcoming Special Event Stations
10. "Amateur Radio Newsline" - Edition #936 from Los Angeles
11. Shuttle Astronaut Talks to New York Students in SAREX Contact

-

Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community. Funding for the program's transmission and production expenses was provided by a grant from the Hiawatha Amateur Radio Club of Marquette, Michigan. Funding to access "The RAIN Dial-up" was provided by a grant from the Eastern New York Chapter 95 of the Quarter Century Wireless Association.

-

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

1294. Re: Neccesary authorization for US han to operate in Canada

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-21 00:00:00 UTC
From: drt@iii2.iii.net

David C. Miller (davidmi@halcyon.com) wrote:
: I am looking for information concerning the neccesary forms/permits/licenses
: etc for a US ham (that being me : -)) to operate (or atleast transport my
: radio back and forth across the border) in Canada. Any help would be
: appricated.

Here's the scoop:

FAQ: US Automatic Reciprocal Operation in Canada

Q1: I have an FCC-issued amateur license. What do I have to do to
operate an amateur radio station in Canada?

A: A reciprocity treaty, TIAS 2508, provides for US-Canada reciprocal
operation of amateur radio stations. No application, registration, or
fee is required. You are automatically eligible to operate in Canada
if all three of these conditions apply:

1. You have a valid FCC-issued license;
2. You are a US Citizen;
3. You are a resident of the US (if you're not a US resident,
please direct your questions to a Canadian official. As I
understand it, if you become a Canadian resident, your US
license is good for a while, but they expect you to get
a Canadian one eventually).

(GR2.45.1.a, RIC-25 p. 9)

Q2: What privileges do Canadian operators have?

A: Legally, Canada has no separate phone band or other mode
restrictions. Instead, they adhere, on a voluntary basis, to a
bandplan, similar to the way we use 160 meters. (The IARU Region 2
bandplan can be found in Chapter 2 of the ARRL Operating Manual.)
Canadian amateur bands are the same as those in the US up through 1.2
GHz, except they have all of 220-225 MHz, and they only have 430-450
MHz. There are, however, bandwidth limits (-26 db):

160, 80, 40, 20, 17, 15, 12 meters: 6 kHz maximum bandwidth
30 meters: 1 kHz
10 meters: 20 kHz
6, 2 meters: 30 kHz
220: 100 kHz
440, 902: 12 MHz
1.2 GHz and up: none specified

(Schedule II, RIC-25 p. 15)

Q3: What privileges am I allowed while operating in Canada?

A: All foreign amateurs, including those from the US, are assigned reciprocal privileges according to the Morse Code speed needed to qualify for their license:

12+ wpm: All "Advanced + 12" privileges
(i.e., *all* Canadian privileges)

[US General, Advanced, Extra Class]

5-11 wpm: All privileges above 30 MHz,
PLUS CW and CW only on all bands below 30 MHz;
limited to Basic privileges [*]

[*] *Canadian* Basic + 5 wpm licensees are allowed full access above 30 MHz, plus (full) access to 80 and 160, only. However, the above *is* what the rules say about *foreign* amateurs operating in Canada.

[US Novice Class, Technician + 5 WPM code]

0-4 wpm: All privileges above 30 MHz, with Advanced privileges

[US Technician without code]

(GR2.45.2,3,4, RIC-25 p. 9)

Q4: What's the difference between Basic and Advanced?

A: Without Advanced Qualification (or equivalent), you may not:

1. posess or install a transmitter or amplifier that isn't commercially designed and manufatured;
2. posess or install any radio apparatus manufactured specifically for use as a repeater where input and output are on the same band;
3. install a repeater where input and output are on the same band;
4. set up a club station

(GR2.47, RIC-25 p. 10)

Basic operators are also limited to lower power.

Q5: What are the power limits?

A: An Advanced operator or equivalent can use up to 1000 W dc input, if power is measured as input to the final stage, *or* an output of 2250 W PEP SSB/750 W carrier power for other modes, if output power is measured.

A Basic operator or equivalent is limited to 250 W input, *or* 560 W PEP SSB/ 190 W carrier power other modes, output.

It is illegal in Canada to posess or install a transmitter or amplifier capable of exceeding your legal maximum power by 3 db.

(GR2.58, RIC- 25 p. 11-12)

Q6: So a General class licensee can transmit phone on 3760 or even 14140 kHz? And a Novice can use a 2 meter repeater?

A: Absolutely.

Q7: But I heard that the FCC won't allow you to exceed your US operating privileges, even in another country.

A: I personally called the FCC and was able to confirm that this is NOT the case. The FCC does not enforce Part 97 in foreign countries. Despite what you may have read, it is perfectly legal to use whatever privileges Canada allows you (see above) while you are operating a station in Canada.

Q8: How do I identify in Canada?

A: If you're operating under your US license, then you use your call "mobile" (if you are) or "portable" (if you're not), *followed by* the appropriate indicator:

Nfld: VO1
Lab: VO2
PEI: VY2
NS: VE1
NB: VE9 (since Dec 1993; prior to this it was part of VE1)
Que: VE2
Ont: VE3 or VA3
Mtba: VE4
Sask: VE5
Alta: VE6
BC: VE7
NWT: VE8
Yukon:VY1

On CW, RTTY, and such you just use a slash, for example, I would use "KG2S/VE2" in Quebec.

The treaty requires you give your location by City and Province/Territory at least once per contact, but the Canadian rules make no mention of this.

While the treaty requires English ID, the Canadian rules allow you to use French, too. A chacun son gout. (However, you are not limited to English or French during your contacts; you can use any language.)

Of course, if you operate a Canadian station or get a Canadian license yourself, you use that callsign.

(GR2.57.1-3, RIC-25 p. 12)

Q9: What if I'm not from the US?

A: You will have to contact Communications Canada (numbers below) and apply for permission to operate. If your country has a reciprocal agreement with Canada, your privileges (once licensed) will be those outlined in Question 3.

If you, as a US licensee, want a Canadian license, you may be able to get it merely by passing a 26-question rules exam and giving a Canadian address. I know of at least one Advanced-class licensee who has done this with a Delegated Examiner. A Canadian station license carries an annual fee (currently about CDN$24), and license terms end 31 March of each year.

Q10: I'd like to get a copy of the Canadian rules. What do I do? Where do I address questions if I'm in a "gray area"?

A: I highly recommend getting a copy of the rules. They publish a number of circulars called RICs that you can order from Industry Canada. They sent me these without charge. You can get them in French, too, of course ("CIR-25", etc.).

ON THE WEB: Most are also at http://www.cam.org/~dino/ric.html.

RIC-25: Rules and Regulations affecting the Amateur Service. 24 pp.

RIC-3: Banned Countries/Reciprocal List/Third Party Traffic List

RIC-66: Addresses and Telephone Numbers of Regional and District Offices

If you want information on exams in Canada, ask for:

RIC-24: Information on the Amateur Operator's Certificate Examinations

RIC-1: Information on the Delegated Examiner system

There are a lot of District offices, so I'm only going to list one in each Province. You can ask them to mail the rules to you, or you could get the address for the office closest to where you'll be visiting and go pick up what you want there.

Subject: Re: Proposal to abolish the FCC

WASHINGTON, D.C. 06/01/95 - A Washington, DC-based conservative "think tank" - with which House leader Newt Gingrich is associated - has proposed to abolish the federal government's role of spectrum management, and basically to de-license the ENTIRE radio spectrum. Franchises would be auctioned off to the highest bidders, and the Department of Justice would be charged with confiscating radio equipment that was not operated in compliance
with these new rules.

The Progress and Freedom Foundation <pff@aol.com> in Washington yesterday released its plan to abolish the Federal Communications Commission. Highlights from the "comprehensive plan" include:

* Unless Congress acts to preserve regulations, all FCC rules and regulations will be rescinded in three years.

* Immediate repeal of all FCC licensing authority.

* All current FCC license holders would receive property rights in the spectrum, enforced by the trespass laws.

* Deeds recorded in a central Spectrum Registry File.

* Any spectrum that has more than 1 claimant would be auctioned within 180 days. Government would establish standardized spectrum parcels for auction.

* Government agencies must "disgorge" their unused spectrum within determined timeframe.

* All restrictions on use of spectrum would be eliminated. Those who win title could develop and/or re-sell the spectrum subject to antitrust review and geographic and interference boundaries; however, legislation would not set forth interference rights in detail.

* Department of Justice would confiscate any devices used in violation of communications rules.

* Complaint investigation and answering of general inquiries from the public discontinued.

* Spectrum above 300 GHz is infrared rather than radio.

SOURCE: Bennett Z. Kobb <bkobb@newsignals.com>, who is editor and publisher of Spectrum Guide, the definitive publication on spectrum allocations.

Subject: tech software

>>Still looking for software to help study for the technician's license.

Here's the finest program I found when I was searching...

Novice/Technician Class Manager
General Class Manager
Advanced Class Manager
Extra Class Manager

FEATURES:

- Simple, intuitive system for preparing for Ham License
Examinations
- Perfect tool for Volunteer Examiners for creating tests
- Manages entire question pool
- Begin reviewing at any question
- Review questions sequentially or randomly
- Shuffle answers for each question if desired
- Take a test from randomly chosen questions (within the
guidelines of the FCC testing criteria)
- Full set of options for customizing tests, including a Test
Design Screen
- Print complete tests, along with answer sheets and score key
- Save tests to disk for later use
- Study assist screen tells you what areas you need to study after
taking a test
- Pop-up on-screen calculator
- Automatically "remove" a question from the "question card deck"
when answered correctly, if desired
- Manually remove any question from the "deck" at any time
- Reinsert into the "deck" any previously removed question
- Start review all over by putting all "cards" back into the deck
- Show answers always or only after an attempt at the answer has
been made
- Saves option settings, deck, and last question number to disk to
"pick up where you left off"
- Print any part of the question pool

Summary: 1
Keywords:
Hi all:
Now, I want to design a PLL circuit for FM broadcast and use MC145163P(IC)
But I can not find this ic in Taiwan so please tell me where I can buy
it !
THe other problem is the bandwidth of one channel in VCO is too small(abort
30KHz).For the FM broadcast one channel need bandwidth need 200KHz , so how
to design it?
thank you!

I appreciate all the feedback that I received from everyone that responded
in posting and email. The problem is definitly related to the IF of the
scanner. It is just an image. Double checking it with another scanner
and my HT proved that there was not a repeater output on that frequency.

Sure do appreciate again all the feedback.

I'll go back to looking for my repeater and hit the "Pass" button! :-)
Next time I will double check with a couple of other sources before I get
all excited.

Best Regards,
Charles

Charles -

There is no business use of 70cm which would fit what you're describing. It's not like it can't happen (just ask some hams in Dallas), but from the variety of the traffic it's sounding like we're dealing with a repeater output. No business repeater operator (in his/her right mind) would set-up shop in a band where the doing so is unquestionably illegal.

My guess is that the key word here is "scanner". Scanners are notorious for receiving "images"; i.e., electronic duplications of frequencies having a mathematical relationship to the frequency you expected to be hearing.

Add 21.4, 21.5, or 21.6 MHz to the 448 frequency and see if you can hear it better. Also, if it is a Uniden scanner (Bearcat, Cobra, or Regency models built after '85 or so), it could conceivably be a frequency in the 158-160 MHz range. From the nature of the traffic you mentioned, it could even be an 800 MHz trunked system with a nearby repeater.

If you find it again, if you have a 70cm-capable ham rig, try to see if you hear the same thing on the same frequencies as the scanner. My bet is that you won't.
...mm

1302. GB2RS News 23rd July 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-21 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <806381563snx@llondel.demon.co.uk>
Source record: 241945
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 23rd of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The 1995 AMSAT-UK Colloquium takes place from Thursday the 27th to the 30th of July at the University of Surrey in Guildford. The event offers something for all satellite enthusiasts, with the emphasis on helping beginners get started. A demonstration station will also be available to allow the opportunity of making contacts via the Oscar satellites. The Colloquium is ticket-only so it is important to telephone for a booking form by Tuesday, the 25th, at the latest. Call Ron Broadbent MBE, G3AAJ, on 0181 989 6741.

A list of centres offering courses for the Radio Amateurs Examination and the RSGB Morse tests is published in the August edition of Radio Communication which is due to be posted to all members on Monday, the 24th. Non-members of the RSGB who wish to obtain the list should send a stamped self-addressed envelope to the Amateur Radio Department at RSGB Headquarters. The September RadCom will contain a list of those courses which failed to meet the deadline for the August issue.

Following the untimely death of Jaap Dijkshoorn PA0TO, John Bazley G3HCT has agreed to take over as interim chairman of the IARU Region 1 Common Licensing Group. John, who is a past President of the RSGB, is a serving Council Member and Secretary of the Society's Licensing Advisory Committee. This prestigious appointment reflects the good standing that the RSGB enjoys within IARU Region 1.

The Class D lifeboat, provided by the Worked All Britain Silver Jubilee Appeal, will be officially named the "C John Morris DFM G3ABG" at a ceremony at RNLI Headquarters in Poole at 2.00pm on Friday the 28th of July. The late John Morris was the founder of WAB, and the lifeboat will be named by his widow, Veda. All are welcome to attend this event, which will take place during the RNLI's Open Day.

This is the last reminder for a chance to win a cash prize and a trophy by entering the Welwyn Hatfield Amateur Radio Club's Open Constructor's Competition. Any self-constructed radio-related project may be entered. Anyone considering entering is asked to contact the Secretary on 0181 982 7298 as soon as possible.

The deadline for nominations for the Young Amateur of the Year is the 31st of July. Full details of this prestigious award, and the valuable prizes associated with it, can be found in the April edition of RadCom. Alternatively, contact Marcia Brimson at RSGB HQ on 01707 659015.

Robert Tweddell, G1RST, recently submitted to the RSGB a multiple award application covering four VHF - UHF bands. This resulted in Bob being awarded six certificates: a Standard Transmitting Certificate for 144MHz; 40 countries confirmed (two-way) for 50MHz; 175 locator squares confirmed on 50MHz; an RSGB DX-25 countries award for 50MHz; a 100 squares, 20 countries certificate on 144MHz, and a 40 squares, 10 countries certificate for 432MHz. Details of the RSGB VHF / UHF awards can be found in the 1995 RSGB Call Book or may be obtained from the awards manager, Ian Cornes, G4OUT, 6 Haywood Heights, Little Haywood, Stafford ST18 0UR, telephone 01 889 882262

Now news of some special event stations on the air this week:

The Dragon Amateur Radio Club is operating GB100NT from Penrhyn Castle this weekend, the 22nd and 23rd of July, in order to celebrate the 100th anniversary of the National Trust. Next weekend, the 29th and 30th, the Ballymena Amateur Radio Club will operate GB100NT from Patterson's Spade Mill.

Instructors and Cadets from the Air Training Corps are putting on a special event station this week at the Royal Tournament. If you are going to the show, which is at Earl's Court in London, they will be pleased to meet you.

GB4SL will be on the air from the Sea Life centre at Tynemouth next weekend, the 29th and 30th of July.

From the 29th of July until the 5th of August the South Notts Amateur Radio Club will be operating GB2PIC from the 'Peak 95' Scout and Guides Camp. The event, which takes place in the grounds of Chatsworth House in the Derbyshire Peak District national park, will be attended by about six thousand Scouts and Guides from all over the world.

GB0BRW will be operated by the Meirion Amateur Radio Society during Barmouth Regatta Week from the 29th of July to the 6th of August. Details may be obtained from Maurice Fowler, GW3GKZ, on 01341 422447.

The Strathmore Amateur Radio Club will be operating GB0TPS from the Tayside Police Spectacular, at Scone Palace in Perthshire next Sunday, the 30th.

The 70 centimetre repeater at High Wycombe, GB3HZ, which operates on channel RB7, experienced a PA failure on the 10th of July. We have not been informed of how long it is likely to be off the air. Further details may be obtained from G4DDM, whose address is correct in the latest RSGB Call Book.

Now a note for your diary: The 1995 RSGB International HF Convention will take place at Old Windsor in Berkshire from the 8th to the 10th of September. The event will feature many lectures and presentations from some of the world's top HF operators and DXers, including Mats Persson, SM7PKK, who will give an illustrated lecture on this year's 3D2CT - 3D2CU Conway Reef DXpedition. A synopsis of the lectures and further details of the RSGB HF Convention are published in the August edition of

Radio Communication. Alternatively, details of the lecture programme and a booking form can be obtained from Marcia Brimson at RSGB Headquarters on 01707 659015.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Libya, the Ukrainian group has been signing 5A1A since the 13th of July and plans to be active until about this weekend. Reports state that a further operation is planned for September and that documentation will be submitted to the ARRL for DXCC acceptance.

From Svalbard, DL5EBE hopes to be active from Kong Karl's Land as JW0K from the 17th of July until the 10th August.

And from Bermuda, G3AVJ is operating as G3AVJ/VP9 until Wednesday the 26th of July. Check 14133 kHz, plus or minus QRM, in late afternoon and early evening.

Next the Rally News:

The Colchester Rally is taking place at St Helena School, Sheepen Road, Colchester today, Sunday the 23rd of July. The event features a wide range of traders, an amateur radio car boot sale, a bring and buy stand and RSGB Morse tests on demand. If you wish to take your Morse test at the rally, please bring two passport size photographs and the appropriate fee. Please note that the doors open at 9.30 am, half-an-hour earlier than the time stated in the Events Diary in RadCom. Talk-in is on 2 metres, channel S22.

The Humber Bridge Amateur Radio Rally is taking place at the Exhibition Centre, Freightliner Road in Hull on Sunday the 23rd of July. There are two large halls with a bring and buy stall and Morse tests are available on demand. Don't forget to take two passport-size photographs if you want to take your Morse test at the rally. The doors open at 11.00 am and talk-in is on 2 metres channel S22.

The Outdoor Boat and Leisure Show at Powderham Castle near Exeter, Devon, takes place today, Sunday the 23rd and features a large amateur radio section.

An Amateur Radio Caravan and Camping Club rally will take place at Lytchett Matravers in Dorset between the 28th of July and the 5th of August. Further details may be obtained from G4LWA on 01494 531755.

On Saturday the 29th of July, a computer and radio rally and games fair will take place at the Clayton Arms Sports Hall, Furtherwood Road, Boundary Park, Oldham, in Lancashire. The event features a bring and buy stall run by the Oldham Radio Club, and the doors open at 10.00 am.

Next Sunday, the 30th, the 7th annual Rugby Radio Rally will take place at the BP Truckstop on the A5, about 2 miles north of Junction 18 on the M1. Talk-in will be on 2 metres, channel S22. To book a pitch, or for further information, contact Steve on 01788 824214.

The Scarborough Amateur Radio Society holds its annual radio, electronics and computer fair at The Spa, South Foreshore, Scarborough, on Sunday the 30th of July. The event features traders, club stands, an RSGB book stall and a bring and buy stand. The doors open at 11.00 am and talk-in will be on 2 metres, channel S22. Further details may be obtained from Ross, G4ZNZ, on 01377 257074.

Now a note for your diary: the Galashiels and District Amateur Radio Society will hold an open day and radio rally at the Focus Centre, Livingstone Place, Galashiels on Sunday the 27th of August. For further information contact John Campbell, GM0AMB, on 01835 822686.

Now for the HF contest news:

Next weekend, the RSGB Islands on the Air - "IOTA" - Contest takes place from 1200UTC on Saturday the 29th of July for 24 hours. Send RS or RST report and serial number plus IOTA reference. The IOTA reference for Great Britain is EU-005, and for GI and EI it is EU-115, although some offshore islands do count separately. The full rules for the IOTA Contest are in the March edition of Radio Communication. A full listing of qualifying IOTA island groups is published in the IOTA Directory, which is available from RSGB Headquarters. For further details of the Directory, contact Marcia Brimson at RSGB HQ on 01707 659015.

Now the VHF Contest news:

The RSGB 432 MHz low power and SWL contest takes place today, Sunday the 23rd, from 0800 to 1400UTC. The rules can be found in the May RadCom.

And now the solar factual data:

The period from the 10th to the 16th of July saw solar activity at very low levels and the geomagnetic field was down to very quiet levels. Sunspot numbers varied little day to day, and with a mean of 28. Solar flux levels declined slightly from 77 units on the 10th, to 73 by the 16th, with an average of 75 units. No solar flares took place during the period. The electron fluence declined slightly but remained at moderate levels. X-Ray flux averaged A3.7 units and remained steady throughout. The 90-day solar flux average on the 16th was 76 units, one unit down on last week.

Geomagnetic activity was very quiet with levels down to only Ap 2 units on the 10th and the 11th. However, levels increased to 20 on the 16th. The average for the period was Ap 6 units. The aa indices, as supplied by the British Geological Survey for the period from the 4th to the 10th of July, were very low with levels dipping to 6.1 nanoTeslas on the 10th. Only on the 4th did the index reach double figures, with a level of 13.8 nanoTeslas. The average was only 8.7 nanoTeslas, which equals K1.

I'll repeat the figures: spots - 27, flux - 75, Ap index - 6, X-Ray flux - A6.9.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 7th to the 13th of July, averaged 6.8MHz. The best day was the 11th with a level of 7.4MHz. The darkness hour lows declined from 4.1MHz on the 8th to 3.3MHz on the 12th, and averaged 3.7MHz. The daytime highs took place between 2000 and 2200 every day. The darkness hour lows took place between 0200 and 0400.

After weeks of excellent sporadic E openings, conditions have been very poor during the period under review.

I'll repeat the figures: highs - 6.8MHz, lows - 3.7MHz.

And lastly the solar forecast.

This week the quiet side of the sun will be rotating away. Even though solar activity is expected to remain very low, solar flux levels are expected to increase to the high 70s. Geomagnetic levels are expected be mostly quiet but could be unsettled today and tomorrow. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north. The darkness hour lows are expected to be 12MHz. Sporadic E can still be expected, although openings on 144MHz will get fewer and fewer. The end of the season is usually about the end of August.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Golf and G7 Uniform Uniform series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Echo series.

You might want to try SuperMorse - it's a great program with many features.
In addition to selecting random characters and mock QSO's, it will output
to either a PC speaker or SoundBlaster.

SuperMorse is available free on the 'Net. The most recent version that I
have downloaded is a self-extracting file called SM415.EXE.

From Tad Cook, KT7H
Seattle, WA July 21, 1995
To all radio amateurs

SB PROP ARL ARLP031
ARLP031 Propagation de KT7H

Solar flux was down an average of six points last week compared to the previous week. Conditions have been unstable, with the worst days July 16 and 17, when the A index was 22 and 23. Conditions should quiet down after a few days, and A indices should drop below ten around the end of the month and stay stable until August 11. Look for the next disturbed period around August 13. Solar flux will rise gradually, peaking around 90 from August 4 through 6.

For the rest of the solar cycle, the latest projection shows the solar flux reaching bottom around late Summer or Fall of 1996, with an average value of 68. The low point for the Sunspot Number is an average of six from April through June of 1996.

Sunspot Numbers for July 13 through July 19 were 23, 20, 29, 24, 22, 19 and 33, with a mean of 24.3. 10.7 cm flux was 72.5, 74.4, 74.4, 73.5, 72.3, 72 and 70.5, with a mean of 72.8.

Path predictions for this week are from Norfolk, Virginia and Little Rock, Arkansas to Svalbard (JW).

From Norfolk, the path looks good on 40 meters from 0030 to 0630z, and on 30 meters from 2200 to 0700, and possibly as late as 1100. 20 meters should be open from 2200 to 0300 and again around 0930 to 1200.

From Little Rock 40 meters should be open from 0300 to 0530z, and 30 meters from 0000 to 0830. Check 20 meters from 1530 to 0100, although on some days it may open as early as 1400 and close as late as 0530.

To all radio amateurs

SB SPCL ARL ARLX032
ARLX032 Stan Kaisel, K6UD, SK

Stan Kaisel, K6UD, died June 22, 1995, in Portola Valley, California. He was 72 years old.

According to the San Jose (California) Mercury News, Kaisel was a pioneer in microwave engineering and made valuable contributions to the new technology of electronic warfare during World War 2. He went to Saipan, where US B-29s were being destroyed on the ground as well as in the air. ''Being 20 years old and not knowing any better, I didn't know you couldn't do these things, so I just went in and did them,'' he later told a historian for the Institute of Electrical and Electronics Engineers (IEEE).

Kaisel became a licensed amateur at age 13, and graduated from Washington University in St Louis in 1943. He went to Cambridge, Massachusetts, and for two years was part of the Radio Research Lab there. His specialty was developing a technique for jamming enemy radar.

Kaisel earned his doctorate from Stanford in 1949 and worked there as a researcher until forming a company, Microwave Electronics Corp, in 1959. Among his scientific accomplishments were helping to build the first linear electron accelerator and developing traveling-wave tubes.

A business associate told the Mercury News that Kaisel was ''uniquely public-spirited,'' citing his fund-raising efforts and his founding of a Wellness Center at Stanford, just before his death. He also was an education activist, involved in supporting public school funding.

Stan Kaisel was an ARRL life member, a member of the board of directors of the Northern California DX Foundation (NCDXF), and also was a member of the Northern California DX Club (NCDXC). He was on

the ARRL DXCC Honor Roll, both Mixed and Phone.

He leaves his wife, Mary Ann Kaisel, and a son and daughter.

Date: 1995-07-21 00:00:00 UTC
From: whester@nyx.cs.du.edu
Message-ID: <3upba4$jpv@nyx.cs.du.edu>
Source record: 241949

I have the predecessor FT-2400H model.

Actually I liked this radio so much that I
purchased 4 of them.

Only problem has been that the memory selection
sometimes skips over the next one when the
tuning knob is rotated. This is more irritating
than a real problem.

The intermod rejection is outstanding...far better
than the Icom or Kenwood units that were out at the
same time. I tested several units and the intermod
would drive me crazy...only the FT-2400H would stay
quiet. They advertise intermod rejection by using
a tracking tuned front end. I assume the same system
is still used on the FT-2500 (they still advertise a
tracking system).

No other problems with any of my radios...they are
built like tanks on a rugged die cast aluminum
chassis/heat sink. They use the same chassis as
their commercial radios.

Bill

Governor's Office of Emergency Services

Bulletin 388 - For Release 7/24/95
MGT - Volunteers- Images & Issues 1/7

Volunteers --- Ugh! - not me!
Unfortunately that attitude or response is not a stranger in some government circles when the topic of volunteers arises.

Interestingly, in other segments of government "volunteer" is a powerful incentive and accepted as the norm. Instances include reserve police officers, deputy sheriffs, volunteer firefighters, volunteer emergency medical technicians, volunteer damage assessment engineers, drowning accident recovery teams, sheriff's search and rescue teams and the Civil Air Patrol.

But, when it comes to communications, the use of volunteers is somehow different; chiefly because it is difficult for people to conceptualize (in their minds) what communicators really do. In contrast, its easy to know what it means to fill a sandbag, drive a truck, remove fallen debris, etc. They all require physical involvement with a known item: assist in law enforcement, fight fire, help wounded, assess damage, find lost or drowned persons and fly a plane. None are as nebulous as "communications", so the idea of "deputy communicators" sometimes just does not make sense to busy government managers.

What is it communicators really DO that makes consideration of their services worthwhile? Since most people do not know, then a typical reaction may be this: "What do we need them for; they are just amateurs anyway, and a real headache. Besides, we have no need to pass volumes of messages back and forth. We have these highly accurate systems that seldom -- if ever -- fail."

In the next six bulletins we'll look at some issues and solutions related to ORGANIZED communications volunteers affiliated with a specific organization PRIOR TO an emergency or disaster. It is based on some forty years experience in that field in government.

O.K. , I am at the point that I know all the letters(except V) & some #'s. I have been learning the letters & #'s at a character speed of 18wpm and word speed of 7wpm. I have been averaging a success rate of 94-95%. My question is this : should I speed it up so that I miss more letters ? I thought I should learn at a speed that I would "get" mostly all of the sent symbols, but I have read here alot of people that say you miss more often. What should I do ? Please E-mail me.
Thanks !!!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z JULY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 JULY AND FORECAST FOR 22 JULY - 24 JULY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 20 Jul
Daily Proton Fluence >1 MeV: 1.3E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 6.8E+08 (high)
X-ray background: A1.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Jul 23 Jul 24 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Jul: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 20 Jul
Learmonth 5 2122 2111
Fredericksburg 5 10
Planetary 8 9

Observed Kp for 20 Jul: 3223 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Jul 13 Unsettled
23 Jul 16 Unsettled to active
24 Jul 12 Unsettled
COMMENT: IPS Geomagnetic Warning 19 was issued on 21 July and is
current for 23 July. Increase in activity expected due
to coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Jul normal normal-fair fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Jul normal normal fair
23 Jul normal fair poor
24 Jul normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
21 Jul 15 near predicted monthly values, with spread F observed
during local night

Predicted Monthly T index for July: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
22 Jul 15 Near predicted monthly values
23 Jul 15 Near predicted monthly values
24 Jul 15 Near predicted monthly values
COMMENT: Darwin MUFs: 10-15% depressed most of the UT day.
Townsville MUFs: 10-15% depressed 00-06UT. Enahncements of 10-20%
observed during local night.
Hobart MUFs: near predicted monthly values, with spread F observed
throughout local night hours.

>I am unsure (as I am new) how my progress is so far.
> Thank you for your help.

Mark,

I wish I would have done this. I suggest you use the "farnsworth" method. Set the character speed to about 22 WPM, then set the word speed to what ever you want to allow your brain to work. To increase speed, increase the word speed. Make your word speed so that you miss about 20 to 30 percent.

Using this method, you'll learn the sound of the characters - whatever you do, DON'T count the dots and dashes - it slows you down - worst thing I ever did to myself!

Walt / KF0OS

PS - 22 WPM Character speed will seem like you can't hear the difference between a I, S, H or 5, for example, but - hang tough, the brain will catch on!

1312. Re: CW an advantage for DXCC?

Newsgroup: rec.radio.amateur.misc

Message-ID: <3uok6j$q8b@idefix.eunet.fi>
Source record: 241998

OM Yin,
you rose the point interestingly, hi.

I keep mixed DXCC, no CW DXCC. I am CW man. I use all other modes, too.

If I wanted to reach all countries (worked and confirmed) in the fastest way, CW was not possible. At any moment there are DXCC countries where the only operator works only SSB or AM long ago. You cannot talk to him using CW. It has nothing to do with "going better thru".

But if I had been able to work all of them on AM in 1962, when I started with a 5 W xtal TX and BC receiver, I certainly had done so. But they were on phone.. arghhhh.
Then I was mixed.

If I remember right, pure CW DXCC came quite late , starting 1st Jan 1975. It was phone and mixed. you choice. Then came those band DXCCs.

Message-ID: <hemstree-2107951005040001@hemstr01.vcd.hp.com>
Source record: 241999

I was listening for repeaters last night with my scanner and happened
across some freq's in the 448mhz region that sounded like business
traffic, i.e.

"I'll get that load of cement over to the yard right away"
"10-4, can you pick up some beer on the way back"
"Base to five. . ."
"Five here"
"Your wife called and asked you to call her back"

etc, etc...

Is the 448mhz region shared with business allocation?

Thanks,
Charles

p.s. I did check my repeater directory and the bandplan from ARRL.ORG, but
I didn't see anything in there about this.

: Is the 448mhz region shared with business allocation?

: Thanks,
: Charles

'Lo Charles.

Common to hear, on my IC 3200, two or more public service frequencies
comming thru at 448.450 and 448.800. Just inter-mod (or forced feed-
thru on the IF freq). It only happens in certain areas of town.
I also hear some commercial stuff once in a while when in Denver area.
Juat the price we pay for less than optimium radios.

1318. What digital mode is on 10.130 MHz?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-21 00:00:00 UTC
From: ring@porky.cb.att.com
Message-ID: <DC2zn9.3uK@nntpa.cb.att.com>
Source record: 242004

I got on HF a few months ago, armed with a new Kantronics KAM+, and found a digital mode transmission that I can't identify on 10.130 MHz. It's on the air from about 6 PM EDT to about 10 PM most evenings, a continuous broadcast, like a bulletin station, and I receive it S9. Sometimes I pick up several of these transmissions on the same band going at once. It sounds kind of like RTTY, but the two tones sound like they're an octave apart, going about 20 WPM.

I've tried all different KAM modes (RTTY, HF Packet, CW, AMTOR, etc.) with all different shifts, inversions, and baud rates, and the KAM has never displayed anything that resembles plain text.

This has stumped all the local experts, except one guy who said we are not the primary users of this band (30 meters), and thus it could be an alien (government) transmission. Any ideas?

Warren Ring

1319. Colorado Repeater/ATV Balloon Launch

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-21 00:00:00 UTC
From: au156@yfn.ysu.edu
Message-ID: <3up3a5$k8v@news.ysu.edu>
Source record: 242005

CENTRAL COLORADO REPEATER/ATV BALLOON LAUNCH

The Central States VHF Society is having a meeting in Colorado Springs
on the weekend of July 29-30, 1995. In conjunction with this event,
EOSS (Edge of Space Sciences) will launch a demonstration flight from
the Navsys Corp. in Monument, CO.

Region: Central Colorado

Date/Time: July 30 / 9:00 AM MDT, 15:00 UTC

Location: Monument, Colorado (20 miles north of
Colorado Springs)
Site Coordinates: 39.09 North Lat.
104.87 West Long.
ATV: 426.25 MHz AM (1 watt output) NTSC color
video
VHF/UHF Repeater: 446.000 MHz FM Input
147.555 MHz FM Output
(note change as of 7/16/95)
Beacons: a) 147.555 MHz carrier from repeater always
on; (periodic Morse ID audio on FM)
b) 144.34 MHz Morse ID audio on FM
(periodic; frequency shared with packet
telemetry)
Telemetry: 144.340 MHz FM (1 Watt output) - AX.25, 1200
baud mostly plain english text; includes APRS
position data string.
Foxhunters: Pikes Peak FM Association, 448.450 MHz
(tentative)

The primary payload will be the Rocky Mountain Radio League's
crossband repeater. In addition, tests will be conducted on the GPS
system's software. A new cutdown device will also be evaluated this
flight. It utilizes a pager receiver, retuned for 2 meters,
interfaced with a "basic stamp" microcontroller for decoding DTMF
tones.

This balloon will ascend to approximately 95,000 feet where the
flight will be terminated by sending a cutdown command to the
payload. The duration of the flight should be around 2 hours with
the balloon reaching its maximum altitude at approximately 1 hour 30
minutes elapsed time.

Reception of both the 2 meter and ATV signals is possible to 400 miles
out and beyond when the balloon gains altitude. All interested

amateurs in Colorado and bordering states with equipment as simple as a 2 meter HT are encouraged to listen in for the steady output of the cross-band repeater on 2 meters with ID, and the ID from the packet system at 144.34 Mhz.

Automatic Position Reporting System (APRS):

EOSS Shuttle controllers now beacon on the packet telemetry frequency with an APRS position string. If you are running APRS you should be able to graphically track the progress of the flight on the "CODENVER.MAP" map file.

The Shuttle is not a TNC-equipped packet station. In order to minimize possible interference with hams in their areas, all APRS users tracking the flight should turn off their APRS position beacons (more packet/APRS info at EOSS web site). Thanks!

For additional launch data and general EOSS information:

Funny that - I looked up my UK call (G0SWG), and it told me that I was living in the US.

Did you know that if you apply for a reciprocal license in the US, they take your non-US callsign and put it in their database with the US address you give them on your reciprocal license application form? Even if the address is that of a motel!

I sent QRZ a mail asking them to put my UK address next to my UK callsign, as that's the house I own, as opposed to an apartment on Long Island that is leased to the company I work for ...

So what kind of software? If you're talking about interfacing then there's
one called kentrol available. I don't recall the exact file name as it's
archived away at home.

1325. Postscript files HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-21 00:00:00 UTC
From: vinyn1vc@aol.com
Message-ID: <3uoeap$q09@newsbf02.news.aol.com>
Source record: 242011

The ARRL BBS and FTP sites post various files in postscript files so that someone with the freeware program Ghost can easily print out a PC Board a laserjet printer. Zack Lau, KH6CP, has files available for his 10GHZ building blocks. Another neat program called HDL_ANT, written by N1BWT, will
lay out templates for horn design and horn feeds for various parabola's, etc.

I have looked high and low for this Ghost program and finally found it on Compuserve. After downloading it and finding it do be about 700K, I fiddled
with it for about a week. The documentation assumes you have used this program before and are a UNIX EXPERT! I do not fit either case. After about
a week, I can print the circuits, but get errors on the fonts. So I commented
them out from the .PS file, because it is not clear how to load them.

My other dillema, is that I don't have a postscript printer. I have access only to an HP Laserjet. Is there a way to make the conversion.

If anyone has a simple solution to the above I will be all ears. Is there a
comercial package available to moreless plug in and go. The money may be worth the tradeoff for all of the time I devoted to this and still have not
found a way to do make a usable printout. Thanks beforehand.

>they spend $25 for that text? The theory portions and data tables (i.e.,
>the non-construction chapters) do appear in cheaper books.

But not in a form as well aimed at radio amateurs. I think most
people view the construction projects in the Handbook the same
way they view those in the magazines, IE as examples illustrating
theory and practice, and not as things to actually build. Some do
slavishly reproduce the Handbook projects, but I expect they are a
relatively small percentage of those who buy the Handbook. Even
among builders, I expect that they use those construction projects
mostly for ideas to be adapted to their own projects.

I know that for many years no broadcast engineering library was
considered complete without a copy of the Handbook, yet few if
any of the construction projects in those Handbooks were ever
built by the broadcast engineers. But the *ideas* they represented
were put into practice in many plants.

It may be obvious, but it's also not true. However, I agree that has little to do with DXCC statistics. That has much more to do with operator mode preference. Only a relative few amateurs have as yet exploited the techniques that far surpass OOK Morse for getting through when all else fails. Much of that lack of embrace of superior technique can be traced to the near universal false belief among amateurs that OOK Morse gets through when nothing else will.

[snip]
As far as TAKING the test is concerned, you may be able to get your VEs to do what mine did: They played the 20 wpm tape first, and any who were able to copy at that rate and answer the questions left the room with a CSCE in hand. Then they played the 13 wpm test and graded papers, and finally the 5 wpm and test.

As long as you pass one of these, you'll be eligible for tech-plus right away, which will let you do anything a Novice can do on HF. As you stated, you can take just the written parts for General, Advanced, and Extra and gain those priveleges if you pass CW at the appropriate rate. You don't have to take 5 AND 13 AND 20 wpm if you can pass 20 to begin with.

LEARNING is a different story, however. You probably won't be able to jump from 0 to 20 wpm overnight. The first step is learning the letters, numbers, and procedurals. You'll only frustrate yourself if you try to build speed before you have all of them "down cold". There are a number of techniques you can use to copy faster (writing longhand instead of printing, copying behind, etc.) once you're sure of all the characters.

Super Morse is a good tool for both learning the combinations and building your speed. I'd suggest you also try to find some tapes or a portable trainer to carry with you and listen to in the car or wherever you can't take your PC.

True. I blew a CW exam because I didn't know SuperMorse has to be
calibrated for speed. It didn't appear in any of the menus, but when I
got home, I found it in the manual on disk. (I had practiced at a
speed slower than that used during the exam.)

You'll lose a couple of words-per-minute speed during the test because
of nerves, so practice at 22 WPM or more.

As a quirk, if you fail the 20 WPM test, but have 65 characters in a
row of perfect copy, you'll get credit for 13 WPM.

I'm a VE. Good luck.

If you're referring to software running on an IBM clone that can remotely control your HF rig, I think several places sell it (including probably Kenwood). However, on many rigs, the voltage levels needed are not RS-232, and so you may need an interface box to go between your COM1 port and the rig (which Kenwood will probably also sell you).

I think I saw a constructions article in one of the ham magazines a couple of yeras ago about building one.

Some logging programs (including the popular CT program, I think) can query the rig and find out the current frequency and mode when you type in a call sign during a contact. Fancy.

Wish I were of more help. Good luck.

>Thanks - Chris N8UDK

6 volts across 10k ohms, represents a forcing current of 600 uA.
Since the Icom can only supply 100 uA, you're loading the circuit
too heavily. Even your meter is loading the circuit too heavily.

It looks like your controller probably represents a TTL load.
That's roughly 3700 ohms. Now if we try to force 100 uA through
13,700 ohms with a constant current source, we'll see a voltage
drop of 1.37 volts. Now the voltage divides between the 10k external
and 3.7k internal load, yielding less than 0.5 volts at the controller
input for a 100 uA ideal current source. That'll be interpreted as a
TTL "low" by the controller.

But the Icom probably isn't an ideal current source. What we have
is a 6 volt source in series internally with a 60k impedance (sounds
like a CMOS source). So now we have a voltage drop in the source too,
and it's substantially higher than our external drop, so millivolts
measured at the output with the added loading caused by your meter
is fully understandable.

What's this all mean? You've got a high impedance source trying
to drive a low impedance load. It ain't gonna happen. You need
a CMOS->TTL converter to make these two systems talk to each other.
An opamp wired as a comparator can do it. The load you present
to the Icom should not be less than 10 megohms, and the output
impedance of the converter should be sufficient to allow a forcing
current of 1.6 mA, one TTL load. There are 74Cxx chips that can serve
as the converter too. These are CMOS input chips with enough current
sourcing ability to handle one TTL load.

>I don't know how far off a 610 imitation has to be before they'll
>toss it. White paper is obviously out

Not any more, I would think. A copy of the 610 is available by fax-back from the form ordering center at 800-418-3676, and the only restriction I could find was a notation in the general instructions that if your fax uses thermal paper, you should copy the forms onto plain paper before submitting them. I presume this also means that double-sided printing is no longer necessary, else you couldn't use them straight off the fax machine.

The only other observation I would like to make is that the 610 on the fax-back service was really crappy-looking. It was obviously a scan, kind of fuzzy, and the original wasn't lined up right. If they'll accept that, my guess is that they'll accept just about anything. The other forms they have revised recently show a general trend toward white paper and simple laser-printing - the form 600 I got in the mail was no better than the one that came off the fax, for instance.

: Congratulations, Lewis. Remember that you can ftp to the FCC and
: check on the status of your application. They update daily, e.g.

: ftp://ftp.fcc.gov/pub/XFS_AlphaTest/amateur/friday.zip

: On the radio, I have one and would recommend it highly. There are
: a couple of drawbacks. The buttons are too small. The antenna that
: comes with the radio is too tight to the case, and if you have the
: rubber plug cover flange doohickey in place, the BNC connector on
: the radio can come loose. These drawbacks in no way diminish the
: good value of the radio, in my opinion. There is also a review in
: QST from about a year ago, I'm sorry, I don't remember the date, but
: the IC-W21AT is right on the cover.

: If you get this radio, please stay in touch.

I did think about it, that's why I put on the tag line you extracted which went on to request thoughtful responses. I'm just more optimistic than you are.

Yin Shih KO6VY (ylshih@alumni.caltech.edu)

P.S. Anomalies can be educational to explore. I'll mention two from coin collecting: (1) early 40's and 50's proof sets are worth *less* as a set than the sum of the individual coins (by the Red Book), and (2) there are some coins that are more rare in circulated grade than uncirculated. Understanding these provides some interesting insights into how coin dealers, collectors and the market works.

>ex-felon of this thread?

A Presidential pardon, or a Congressional private bill, are only needed
for *Federal* felonies. For State felonies, the appropriate level for
restoration of rights is the governor's office. This is usually delegated
to a lower level of the administration, often the Pardons and Parole
Board.

Yep, the mike on Letterman's desk is just a prop, which he brought over
with him from NBC. It's not hot. He and his guests use wireless lavs.

The RCA 77DX is a *wonderful* old microphone for certain things, but
nobody is actually using these as desk mikes anymore. Many, many years
ago I used a 77DX on a boom for my 75 meter AM station. Sounded really
good. It has an incredible proximity effect, though. Where this mike
really shines is in miking a concert piano. That ribbon has a really
smooth response.

>contesters prefer phone because the QSOs/minute rate is higher.

I think you'll get some argument about this. While it's generally
true that the top serious Dxers have serious stations, it's far enough
from being universally true for DXCC that it probably doesn't answer
the question. I also expect that serious CW operators will contest
your claim of phone having a higher QSOs/minute rate. The exchange
has very little actual information content, and takes little time
with either phone or CW. In contest sprints, such as Field Day (ok,
it's an *emergency preparedness exercise*), the CW stations often
have a higher per hour contact rate than the phone stations (which
may only represent a different degree of fanaticism). Again,
the exchange has little informational content. It's only when you
have substantial content to exchange that the mode's 'Q' factor
really matters.

>I once read that the apparent difference between CW and phone is a couple

>kHz in a complex analog waveform. On CW, it's all concentrated in a
>single frequency wave that is either on or off. CW is just a human-
>readable digital mode with a low data rate.

For typical amateur stations, the advantage of CW over SSB is only
about 6 dB, IE one S-unit. This assumes a typical 500 Hz CW filter.
For exceptional operators with good wetware signal processing, that
can be increased to 12 dB, or even 18 dB under exceptional circumstances.
Note that phone operators also use a form of wetware signal processing,
called the cocktail party effect, in order to increase their raw
performance. That, coupled with the redundancy of speech, can lower
the margin between phone and CW back down towards 6 dB. A lot of other
factors are at play here than just raw SNR.

More important than the raw noise performance, however, is the ability
to discriminate between the desired signal and a strong undesired signal
on a nearby frequency. Here the narrow filtering, or the single pitch
discrimination that some people have, can make a difference out of
proportion to raw SNR figures. Not everyone has good pitch discrimination,
however, so this advantage is not universal. And phone has its counterpart
in the cocktail party effect.

Note: as usual, I'll remark that coherent digital modulations can
do much better than OOK Morse, on the order of 32 dB better with
the right equipment and codings.

But back to the original question. I think the disparity in numbers
of phone vs CW DXCC awards can be explained by looking at the ARRL's
mode survey. They found that 78% of all amateurs used phone while only
38% said they *ever* used CW. The number who said they used CW *only*
was not reported. (This survey was made before the code test free Tech
license became available and represents the operating preferences of
licensees who had passed a Morse speed test.) So obviously with the
phone operators being vastly in the majority, it's not unexpected that
they will be in the majority on the DXCC lists. After all, it doesn't
take weak signal techniques to work 100 countries on HF.

It is never in poor taste or overly agressive if a salesperson takes a moment to introduce themself and offer help after a customer has been browsing for three or four minutes. A good salesperson will recognize the "regulars" and know if they're just grazing. Otherwise, a self-introduction and an offer to answer questions are the best way to deal with a new customer ... it certainly doesn't need to be opressive, just friendly.

And, yes, AES has to be one of the worst in the business ...

This is exactly right. Just a friendly "Howdy! Please let me know if there is anything I can help you with." Then, if the customer doesn't ask for help right away, back off and let them have some breathing room. Don't make the customer feel as though he is being watched. Be approachable and ready to answer questions that might arise... with a smile. As was stated in a previous post, don't make the customer feel like an ass for asking a question by answering with "it's all in the manual." Take a little time to get to know the product you are trying to sell so you can actually help people out when they ask a question. If you don't know the answer, don't BS your way through it, admit your ignorance and offer to find out the answer. I HATE it when a salesperson tries to BS me! It is so transparent.

Ahhh... had to get that off my chest. ;-)

B>they were/are first learning code ? I had a good day at work. Came home
B>ready to practice and learn the final 3 letters. I could not do ANYTHING
B>right. Mixing up my c's & y's. Thinking h's were 5's. Oh well...

That happens. When I was learning code, a whole 8 months ago, there
were days when I couldn't copy a thing. I hated the stuff. I would
leave it alone for a day or two, not even think about it, then come back
and copy 15-20wpm. Not for very long mind you, but long enough... When
you quit for a couple days though, you have to watch out... It becomes
really easy to say "aw... I'll do it tomorrow"

Good Luck!!!

HRO in Portland had the same kind of crowd everyone is talking about here. I went there a month ago to look at some 2m radios. I went with another ham and a prospective ham. Three guys working the counter, none of them seemed to be doing anything important except waiting for business. The prospective ham went to the counter to ask about a Diamond RH77ca as a scanner antenna for his PRO-43. Nobody acknowledged him. He had to really go out of his way to get some help. Anyway, the guy at the counter seemed pretty peaved that my friend would have the nerve to ask him a scanner question. He didn't answer my friends question about the antenna's performance and basically laid it out on the table for him to decide by the look of the packaging. No further comment. To say the least, my friend did not buy the Diamond. I wasn't impressed by their willingness to be assistive, and probably won't go back unless I am in dire straights.

On the other hand. . . The folks at HRO Denver go out of their way to make sure that you are a satisfied customer. I won an inexpensive antenna from a contest that had an HRO sticker on it. After a couple of weeks, I decided that I would try and take it back for a better antenna. They bent over backwards to take the antenna back and asked me about the needs I had for a different antenna. I walked out of there with a new antenna that met my needs and I didn't have to pay an arm and a leg for. So, if I ever do business with HRO in person, that's where it will be.

As far as letting customers be, I would certainly fall in that catagory after I have had a query as to whether or not I need any help. Every ten minutes or so afterwards would be just great. If I need help, I definitly don't mind asking for it.

Just my two cents worth.

Happy shopping,
Charles (KG0QK)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z JULY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 JULY AND FORECAST FOR 23 JULY - 25 JULY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 21 Jul
Daily Proton Fluence >1 MeV: 9.2E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.5E+08 (high)
X-ray background: A1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Jul 24 Jul 25 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Jul: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 21 Jul
Learmonth 7 2222 2222
Fredericksburg 5 5
Planetary 8 5

Observed Kp for 21 Jul: 2222 2221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
23 Jul 16 Unsettled to active
24 Jul 12 Unsettled
25 Jul 5 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 19 was issued on 21 July and is
current for interval 23 July. Increase in activity expected due
to coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Jul normal fair fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Jul normal fair poor
24 Jul normal normal fair
25 Jul normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
22 Jul 18 near predicted monthly values

Predicted Monthly T index for July: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
23 Jul 15 Near predicted monthly values
24 Jul 15 Near predicted monthly values
25 Jul 15 Near predicted monthly values
COMMENT: Darwin MUFs: 15% depressed most of the UT day, spread F
observed during local night.Townsville MUFs: 10-15% depressed
00-06UT. Spread F during local night.
Hobart MUFs: near predicted monthly values, with spread F observed
throughout local night hours.

1365. Amateur (jerks) Electronic Supply

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-22 00:00:00 UTC
From: pinky@primenet.com
Message-ID: <3upsl6$4fb@nnrp1.primenet.com>
Source record: 241956

Guy enters a store (not a homeless person). Three clerks at the counter-one engaged in social chitchat with someone, another working on the phone with a customer a third entering data into a PC. Guy waits 4-5 minutes. Store clerks don`t even recognize his presence. Guy approaches clerk working on computer. "How long will it be before someone can wait on me?"

Clerk says: "I`m gonna be busy for 30 minutes".

This is the kind of treatment you can expect at Amateur Electronic Supply in Orlando.

I have received email from others who have been treated poorly by these jerks. IMO, they are a bunch of A**holes.
For those of you who are unhappy with these guys, there's always Ham Radio Outlet, 390 Diablo Rd., Ste 210, Danville,CA 94526 (510) 831-1771.

1366. Teletype question

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-22 00:00:00 UTC
From: jka@mustang.ece.cmu.edu
Message-ID: <JKA.95Jul21230431@mustang.ece.cmu.edu>
Source record: 241957

This question is only mildly radio-related, but I can't imagine a better place to ask it.

I have an old Teletype-- one of the type that people used to use as computer terminals. I got it a couple years ago but haven't used it much.

This evening I was investigating the cause of the poor print quality when I noticed that the type cylinder-- the thing with all the letters on it-- had black gunk caked all over it. I assumed it was ink buildup and started cleaning it off. Then I noticed that the black gunk was also all over the little hammer that hits the cylinder as it types. It had even more black gunk on it. Then I started to think that the black gunk might be the remains of a rubber bumper that was on the end of the hammer-- the part that strikes the cylinder. In any case, I didn't want it gumming up the cylinder again, so I cleaned the gunk off the hammer too.

Question: Is the hammer supposed to have a rubber bumper on it? If so, how important is it that it's there? What might I use as a replacement?

- Jay, KE3AT

Not in the US, but scanners are notorious for picking up images.
Likely you were receiving an image frequency from the 450-472 MHz
business band. Try looking 21.4 MHz above the indicated frequency.
That's where the source of the image will be found.

Message-ID: <3uq38n$lg7@maureen.teleport.com>
Source record: 241960

For Information:
BEGIN -- Cut Here -- cut here
Curtis Wheeler (cgwh@chevron.com) posted a note about how to
get FCC forms from the FCC via FAX. I tried this and it
worked nicely using Windows Quick-Link 2 Fax software on a
Hayes compatible modem on my 486 computer.

Phone number for the FCC Fax Retrieval System is
1-202-418-0177 24hr service.

Not knowing what any document numbers are I requested an
index expecting to get maybe a single page. Not. The index
is 4 pages long. Anyone not wanting to put the extra 6 to 10
minutes on their long distance phone bill can Email me at:

woody1@teleport.com

and I will be happy to get you the form number so you don't
have to request the index.

There are roughly 32 documents available including forms,
pamphlets, and instructions. All range from 2 to 36 pages worth
of faxed documents.

As time permits I think that I will copy the index to disk so
that I can send the whole index via E-Mail when and if needed.
However, it is not available at this time.

Thanks.
END -- Cut Here -- cut here

You are very fortunate. LA has a ham-written ordinance governing
antennas that is very liberal. Contact ARRL or your section managers for
details. There is a discussion of the ordinance in August 95 QST.

I have to agree. Two years ago I was in Orlando on a business trip. On the last day I had six hours until my flight left so I called AES and asked directions to the store.

I was going to buy a dual band hand held to take back with me. Also needed an HF antenna, which if I bought, I would have shipped back. When I walked into the store, there were three clerks at the counter. One was sitting by the phone reading the paper, one was staring aimlessly and the other was on the phone. Not one of them looked at me, acknowledged my presence, or asked to help me. I looked around for 15 minutes and studied the radios. No one asked to help me. I am not too shy by any means but I like to deal with people that act like they want my business. Since these guys seemed like they did not care, I did not buy. I left the store without making a purchase.

The original post reminded me of another AES story. When I lived in St. Louis from 1986 to 1990 there was no close ham radio store. So when I wanted to buy a new HF radio, I called AES in Milwaukee. I asked them to send me out some brochures on the various radios I was interested in. Then I asked the "salesman" what radio he would recommend. He said they could not recommend anything since manufacturers would get mad. O.K. I said, tell me the pluses and minuses of the various radios. He said he could not do that either. I asked him if he could help me select a radio, how was I to figure out

which radio was best for me. He said to go to a hamfest, look at the radios, then order the one I wanted from them! Can you believe this B.S.? If some other vendor is going to take the time to work with me, then that is where I am going to buy the radio.

AES is very arogant. That is why I now buy all my equipment from Burghardts(sp?) or R&L locally. You can have AES.

Regards,

Duffy - WB8NUT

1375. Re: Teletype question

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-22 00:00:00 UTC
From: "George L. Hiscox" <ghiscox@netcom.com>
Message-ID: <ghiscoxDC437G.I7u@netcom.com>
Source record: 241966

You failed to mention the model number of the Teletype unit you are using, but from your description you could be referring to either a Model 28 or a Model 35. Both had a hammer and a type box. In operation the hammer travels from left to right along a rail suspended on two wheels and is attached to a stranded wire cable. The type box is positioned so that the hammer strikes the back of the various letters as it is repositioned each cycle of the machine.

The simple answer to your question is that machines of this design did not have any rubber surrounding the hammer. There was a spring loaded shock action associated with the hammer however. Cleaning it should not cause a problem. The guck you see on there is probably a combination of ribbon threads, dust and ink and any solvent should do the job. I have used Gunk brand engine degreaser or similar to clean the old oil from the typing units followed by a water bath from the garden hose. Blow the water off with compressed air to speed the drying process or leave the typing units out in the warm sun. After cleaning there are NUMEROUS felts that should be re-oiled, including inside the clutches on the main shaft. Get a good bright light and look hard!

Good luck, Mr. Phelps! This email will self-destruct in five seconds . . . . .

73/George

Well, by now I would definitely call you stupid. You have never been into a pile-up, I gather from your statements. You have never had the chance to prove in reality that your so beloved digital modes are so superior. So why do you ramble on endlessly about theoretical possibilities.

PROVE what you want to tell us. Prove a 200 QSOs per hour rate with a digital mode. Show us the QSL-cards, confirming your digital contacts with 3Y0PI, 9M0S, 5A0A and other real dx and then we can start a discussion. But arguing about dx without knowing what dx is about in reality is stupidity, stupidity, stupidity. Think about it.

I will be active from San Andres, HK0, next week. I promise, you will not be able to establish a contact with me other than CW. You can try to imitate CW with a computer and nevertheless you will not have a QSO. I would not ignore your callsign, but you would be lost in the pile up, because it takes a little more than just switching a computer on to work a dx-station. It takes skill, experience and dedication. In one word, one needs to be superior (not in terms of big amps and antennas) and we have had that term in a different context before, Gary, didn't we?

GC>as defined under law, or is it equivalent to a group of loungers
GC>hanging out on a street corner exchanging tales. I contend it is
GC>the latter. If I pass around a letter I received from someone to
GC>a group of people on a street corner, I haven't published the letter
GC>under the normal meaning of publishing. I've merely showed my copy
GC>to a group of associates (however many), which is allowed. Rules
GC>devised for ink on paper don't fit well with electronic messaging.

Actually, IMHO, the questions boils down to what is good taste. A message sent in private is intended to be private and unless there are extenuating circumstances it SHOULD remain private. What are we, a bunch of wanna be lawyers here? What happened to manners? This "controversy" has degenerated to the point where I've almost forgotten what the original question was (and it's irrelevant anyway to where this is going).

my computers send code pretty well. how are you going to know if i'm a computer or a real operator (tm)? at your end we're just going to "beep".

>would not ignore your callsign, but you would be lost in the pile up,
>because it takes a little more than just switching a computer on to work a
>dx-station.

no, that's about it..that's what the various radio companies endeavor to do. If i was at some place like KHT (i don't even know if i could run CW there, probably...), i would have the antennas available to probably just bust the pileup on the first call. (that's what i miss in my current situation, no access to a killer dx station..such fun to just make 1 call, work 'em, and add another card to the outbound stack....). and if i didn't get you on the first couple of calls, i could turn the amplifier on...

I am not an attorney, but I do have some experience with covenants due to
living in a rural subdivision with unusually tight covenants - except for
antennas, fortunately.

The concept of putting restrictions on your own property is an interesting one.
However, covenants normally apply to multiple properties in a subdivsion or
other entity and require approval by the applicable parties to modify them.

It would seem to me that it would be extremely difficult to just put a restriction on your own individual lot without going through some form of review/approval process by those others who may be affected by that restriction.

Sounds like a good question set for an experienced real estate attorney.

I guess I'm lucky never having been in an AES store but I have been
in HRO both in GA and NH. In the GA store some of the clerks have a talent
for making you look feel foolish for asking a question. i.e. "Its all there
in the brochure." (Yeah but I thought you might be able to clarify and
expand upon the subject.)
I went in the NH store last fall looking to buy a new mobile VHF
rig and a few odds and ends. I must have been invisible because I spent 25
minutes looking through brochures and eyeballing the radios and no one
asked if the could assist me (two customers/three people behind the
counter). I found some of the odds and ends and went to the counter to pay.
Same story, one guy on the phone and two others yakking with a
customer/buddy. No acknowledgement, not even a "I'll be with you in a
moment." I just left the items on the counter and walked out never to
return.
As a long-time F&B person I am aware the most people who receive
poor treatment in an establishment don't complain, they just don't go back!
HRO will never get an green out of my pocket again.

I guess if you want a little service you have to go to a little
church...

I think everyone who has posted to this topic expects too much. I'd
say 9 out of the 10 people I know who go to local ham stores do so to
fiddle around with radios and try them out. They don't *want* to be
bothered by a salesman. When they're ready to buy/try something, they
walk up to someone and say "excuse me...", an item which appears to
be missing from most of the complaints I've read.

I saw a piece in the newspaper once that went something like this.....

Your store spends millions on dollars a year in advertising to get me
to shop there. If you had treated me right in the first place...I
would never have left.

That should be taped to every cash register, in every department, in
every store. Just my $.02

: [snip]
: : Should I start with 5- or 13-WPM, or can I learn at the upper speed?
: [snip]

This is what I am planning on doing [and am currently attempting to do].
I would much rather only have to do a code test once, so am starting with
aiming for the 20 wpm one.

I have found that since the characters sound so different at the higher
speeds versus the slower ones, I will ahve to entirely relearn everything
anyways to do a faster speed test...

: LEARNING is a different story, however. You probably won't be able to
: jump from 0 to 20 wpm overnight. The first step is learning the letters,
: numbers, and procedurals. You'll only frustrate yourself if you try to
: build speed before you have all of them "down cold". There are a number
: of techniques you can use to copy faster (writing longhand instead of
: printing, copying behind, etc.) once you're sure of all the characters.

I found that learning characters at slow speeds just confuses me even
more at faster speeds as I have to unlearn what I learnt and then relearn
at the higher speed. Further, some lcharacters to ME, at higher speeds
do NOT sound like what they "are" in terms of dits and dahs -- often I
can't tell if the tone is long or short; I ahve to go entirely by what
teh entire cahracter "sounds" like; which as I understandd it is
apparently the better way to learn anyways.

I DO have a question about the test that hopefully someone can answer.
Actually it;'s more of a problem that I hope someone has an answer to.

At some freuquencies of sound, even at a character sped of 5 wpm, I am
completely unable to differentiate long form short tones; at higher
speeds it means that two character can sound identical even if one is ..
and the other -- as an example. I am fine with the tones at a frequency
of 500, but if it is at 800 I am completely lost... Being tone deaf may
have something to do with it, I really have no idea...

So, on the tapes that are used for the code tests, what frequency are
they using for the tones? Also, can that frequency be adjusted if it is
one that a person can't comprehend because at it they can't distinguish
between long and short tones?

I suppose one could say excuse me but the store has nothing to
lose by having an employee say "Hi. My name is Joe Blow. Please let me
know if I may assist you." That would not blow a potential sale but
totally ignoring a potential customer can, especially at the price of
radios today.

That is one good point. The other is that, it is no skin off my back
if they don't want my business. I am NOT there to IMPRESS THEM. I
am there to look and buy. I pay a little more to buy from HRO or
a local AES if I am in person (sales tax and lack of mail order discounts
from other houses) - and I expect something for my extra money. If
I must do all the work - why the heck should I buy there? I won't -
I will go mailorder and hear the local salespeople complain about
me after that, ruining local business and all that.

Humbug. All I want is some courtesy, an inquiry about what I am looking
for, and knowledge about the rigs they sell. I have found a paucity
of all of these in a majority of situations. When I have found a sales
person who actually gives me attention, respect, and knowledge about
the rigs for sale, they have a customer who is loyal - I remember these
things and I go there, to that exact person, again.

My point was: how does an employee know he's ignoring you unless
you say "excuse me" and ask for help. I know nothing aggravates me
more than having a salesslime drape all over me the minute I walk
into a store -- I specifically stay away from one local store because
I've had salespeople follow me around and literally ask me three or
four times in the course of 5 minutes "is there something I can help
you with?"

Many people who go to AES/HRO stores do so because they want to
look. Statistically you are in a minority, and a store is going
to tailor their behaviour the way a majority of people want it.

This seems to work fine. Myself and three other people at work have all updated our mailing addresses with copies I made from the document I received by fax. I just ran it through the copier (not even double sided - used two sheets), filled it out and sent it in. A week later I was current on a couple of servers

The fax quality I observed was pretty good once I gave up on my Winfax software and used the plain paper laser fax machine at the office. BTW I am not knocking Winfax - it just works best when you receive docs in fine mode as opposed to normal.

Too bad you still have to use snailmail to send the completed form back to G-burg.

: just keep them in a cool dry place, charge them fully and slowly
: before use, and they'll do fine.

Unfortunately, I have ruined more than a few electronic, non-radio, appliances, such as a DustBuster, by leaving them on the charger continuously. I am trying to avoid causing the same damage to my HT battery packs; guess the answer is to buy extra packs.

The way that a lot of these units are packaged, though, would lead the average individual to believe that they should be stored on the charger. Said DustBuster was a good example, with its wall-mounted storage caddy/ recharging base.

A lot of the commercial HTs that I have seen at swapmeets and elsewhere are supplied with a charging base; again that implies storing them on the charger when not in use.

Does this seem odd to anyone else?

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

(gain-without-pain stuff deleted)

: To bring this back around to communications, we now have machines that
: can offer us communications gain without the pain of manual methods.
: We should take a page from the physical conditioning field and stop
: using methods that generate pain, and the damage that triggers that
: pain.

I hesitate even commenting upon this silly stuff, except it might be
fun...

Learning the code is hardly "painful", and certainly not analogous to
the kind of "no-pain-no-gain" training professional atheletes have
gone through. And relying on "machines that offer communications gain
without the pain of manual methods" is certainly a far cry from "low
impact aerobics". Actually, they're a bit more like a big fluffy
couch positioned in front of a big screen TV. (If you don't use it,
you loose it). You're not advocating reasonable exercise...you're
arguing for a generation of modem-potatoes...or is that potatos?...

And don't forget repeditive motion disorders tied to keyboard
overuse...talk about pain...

Giving this thread the serious attention it deserves (:-),

This may be true just about anywhere. I have heard a lot negative about the HRO outlet in Anaheim, but when I visited there a couple of months ago, I saw no problem. While I wandered the store looking at everything, no one asked if he could help, but my purchase of $75 worth of books was cheerfully received.

There is one place in CA that is still friendly to hams - The Radio Place in Sacramento. I have been in there twice, and one salesman - Rudy - spent a lot of time just talking with me and another ham, socially, before I demonstrated any intent to buy anything. I am not sure if they ship widely, but Rudy told me they could ship to southern CA.

Ordinarily I would make major purchases via mail order, especially high dollar-amount purchases, just to avoid the exorbitant CA sales tax. But that is what has probably caused the demise of the friendly, local ham radio store.

It may just be an oversight. I feel fortunate that the manager of the local RS nearest to the areas where I shop otherwise, is a ham and a member of our local ARC. However, when I went in to buy the frequency guide that accompanies _Police Call_ one of the associates went to great length to ensure that I was not buying the wrong book by mistake. He did not know me as a ham, BTW, or as a club member.

Unless the salesperson is a ham, and even then, he may not be aware that the question pool for any given class has changed. I happen to know only because I am a prospective VE and, as club treasurer, work closely with the VE Team.

Local management can make all the difference, and this goes for franchised outlets other than RS.

I'll echo your sentiments about the radio but alas I sold mine awhile back to buy my dual-band radio.
The things I liked about the radio - well.. the whole thing was great including the fact that they put the microphone connector on the left side of the radio - better for mobile installations.

> Only problem has been that the memory selection
> sometimes skips over the next one when the

The FT-5100 and FT-5200 also have this peculiar quirk too. There's a mod you can make to those radios to eliminate the problem.

Yeah.. my FT-2400 has taken a couple of spills while in the hands of it's new owner and still works like a charm as his packet station.

>Keeping the side windows cracked ... is an open invitation to theft.

How so?

I've heard from many people that they close their car windows all the way to prevent theft, but never have I heard an explanation of WHY this prevents theft more than a 1/2 opening at the top of the window might. Given a modern car with non-coathangerable (?!) lock buttons, what additional difficulty or deterrance does the closed window offer?

Facts, please, if you have them. I'm genuinely curious.

mjsilva@ix.netcom.com (michael silva) writes
Re: CW REQUIREMENTS
> This intrigues me. Can you give some examples of what kinds of
> questions are asked at entry-, mid- and advanced levels?

The same Technical exam (two written multiple choice exams) are used
for all Amateur licenses here (except for Novice licenses which are very
new)

Bothj papers must be passed ... There is no fixed question pool or sample
papers issued only the syllabus. The exam can only be taken twice a year
on set dates nationally.

Typical questions (ignoring local licensing regs):-
The Velocity factor of a co-axial cable with a solid polythene dielectric
is a) 0.66 b) 0.1 c) 0.8 d) 1.0

Colpitts, Hartley, Vackar, Clapp-Gouriet are all types of
a) power supply , b) amplifier, c) oscillator d) modulator

A herring bnone pattern is caused on a TV picture, this is likely to be
caused by
a) poor commutaion in an electric vacuum cleaner
b) a nearby radio transmitter
c) a facsimile receiver
d) a model train set

There are lots of circuit diagram recognitoon and mini-circuits where
you have to work out the impedance/capacitance etc.

eg recognise a filter from diag as band-stop filter/notch filter/braid
breaker adn high pass/low pass filter.

Hi everybody. My charger died. (puts 5 VAC on top of 8 VDC)
I know I can fix this with a diode but I want to build my own from
scrach. What I need to know is the charging current I need to
supply to the battery. Is there a formula or something?

Also.....
I know I can limit current with a resistor. Question is, lets say I need
65 mA into my battery to charge. Do I calculate the resistance into
a dead short (no battery, just a short where the batt would be)
so that current would never go beond that limit or can I use some sort
or regulator that always puts 65 mA into the load (battery) no matter
what the state it is in.

BTW, the batterys I have now are 7.2 V @ 600 mAh. The reason
I want to build my own charger is that I want to be able to charge
several diffrent size batterys from 1 charger. (and it is cheaper to
build than to buy a charger for every diffrent type of battery I have)

Thanks if you can help!

Chris...

No. It has to do more with 1) personal mode preference (pleasure),
2) comfort (what is known is preferred), 3) availability (many hams do
not have...or choose not to expend time/money on new technologies).
Virtually no one (IMO) chooses not to use "advanced modes" because
they believe CW is a superior performer under adverse conditions.
They choose CW over the other modes available to them (usually SSB)
partially because of CW's superiority over _them_ (it).

Some of these perceived "reasons" for CW's popularity (like "universal
false beliefs" and "fear of loosing one's mode" are really quite funny.

Those who actually operate (or even prefer) CW do so because they
enjoy it. Those who regulate Amateur Radio believe CW is important
enough to require its knowledge. And many of those who have
considerable experience in Amateur Radio and with CW (Morse) happen to
agree with them.

It's all really quite simple. They don't agree with you, Gary. But
that doesn't mean they're stupid, paranoid, misguided or conniving.
Trying to demean someone's position by attributing it to unfounded
motives or beliefs may be good rhetoric, but it's certainly not going
to sway people who have an understanding of the topic.

>Mike, KK6GM

I can only speak for Germany and Austria: In Germany you have to take a written test in three categories: operation procedures, legal regulations and electronics/RF- and communications technics. All questions have to be answered in detail, not with multiple choice.

For example you have to do all calculations in writing or draw circuits like transistor or valve amplifiers, VCOs, VFOs, explain the basics of digital communications and calculate the various values of a given circuit. In Germany the theorical test is the same for all license classes, except that for the highest class you have to answer 75% of the question of each of the three sections correctly. You cannot show a deficite of understanding in technics and make the difference up by a better knowledge of operating procedure.

In comparison to the USA license the German standards have to be considered as being more difficult, especially true, when you consider the possibility of answering a multiple choice question correctly, even if you are not quite sure.

In Austria they require oral testing in addition to the written test. They tend to ask some question on subjects covered in the written test and try to find out, if you really understood what you wrote or just memorized everything.

I have dealt with AES several times and never had any problems. If any of these stories were true as depicted, I doubt they would be doing the booming business they are. From visiting the HRO store in Phoenix several times, I sometimes wonder how the salespeople there put up with some of the customers these stores seem to attract once in a while. I'm sure it's the same with AES.

One customer returned a 2-meter mobile rig a few days after he purchased and used it. He demanded (and got) a full refund after screaming at the sales people that they had misrepresented the product. When he was sold a two meter radio, he expected just that! When he opened the box, he found to his dismay that the radio had only ONE METER not TWO on it!!! I suspect this guy never learned CW. Either that or he's been hanging out too long on 14247!!

Basically you have to get in touch with your local emergency management agency and inquire as to how enlist into the local RACES chapter. For ARES, contact the ARRL (info@arrl.org) to find out who the E.C. is in your area and follow the same idea. That's all there is to it..

1416. Heard my first space shuttle communication...Fun!

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-23 00:00:00 UTC
From: david_b3@sfov1.verifone.com
Message-ID: <1995Jul23.180210.4057@sfov1.verifone.com>
Source record: 241807

I "discovered" a new aspect of amateur radio enjoyment the other evening. I had programmed 145.585 (space shuttle transmissions) into my HT, but never listened in. The other night I turned it on and caught Houston's wake-up call to the shuttle and the ensuing chit-chat between Houston and the shuttle. Lots of fun! Much of the time thereafter, there was not much going on, but I thought it was really cool to hear what I did.

TN>: Congratulations, Lewis. Remember that you can ftp to the FCC and
>: check on the status of your application. They update daily, e.g.

You can also use the Web to get the info:

http://www.ualr.edu/doc/hamualr/callsign.html

This is updated daily and you can search by name, city, state, etc.

I found it to be "easier" than downloading the "zip" file from the FCC.

TN>: On the radio, I have one and would recommend it highly. There are
>: a couple of drawbacks. The buttons are too small. The antenna that
>: comes with the radio is too tight to the case, and if you have the
>: rubber plug cover flange doohickey in place, the BNC connector on
****

I wondered what the "technical" name of that little item was! (g)

I have the IC-24AT and find that while I like the overall small size,
the buttons are a bit small for my fingers at times and the display is
hard to read sometimes (depending on the light and angle I'm looking at
it). Over all though, I like the radio.

: appricated.

: | David C. Miller - KB7ZJY |

You can operate without any more paperwork than you would need in the
U.S.. Lat's see, in Radio Information Circular 25 from Communications
Canada we find:

---

57. (2) The operator of an amateur station licenced by the Government of
the United States shall identify the station

(a) by transmitting the call sign assigned the licencee of that
station or to that licencee's station by the Federal Communications
Commission;

(b) if transmitting

(i) by radiotelephony, by adding the word "mobile" or "portable",
or

(ii) by radiotelegraphy, by adding an ablique ("/"); and

(c) by adding the Canadian amateur call sign prefix set out in
column I of an item of Schedule V for the geographical location
of the station set out in column II of that item.

Now for call sign prefixs, well B.C. is VE7, Alberta is VE6, if your
interested in others let me know...

As a former RS employee, I would guess it is most likely not intention-
al. As we all know there are exceptions to every rule, however.
Most people who work in the stores are lucky if they know about the
radio's themselves, much less the accuracy of the books. Most of the people
I worked with would know that if you buy the radio, you have to have a license
to use it. (I know this doesn't apply to the advanced book since RS has yet to
offer any HF equipment since the HTX 100, just trying to make a point) They
would then direct you to the book shelf. This is probably one of the areas
of the store that gets the least attention. I am pretty sure I have seen new
editions of books (same title) with different covers. Therefore, unless
something comes over the computer at night telling them to remove the old books
(which it probably won't since selling the old books is not illegal--scanner
hobyists will know what I am referring to here:-)), the old books will remain,
although maybe at discounted prices.
Just my $.02. Don't take this as an overall defense of RS or anything
like that, all std disclaimers apply, etc, etc....

Well, I also have to agree with previous postings on this one. My experience was just as bad up here in Milwaukee at AES Headquarters. There weren't just 3 guys at the counter, but 7 or 8...and all exhibited a total lack of interest in what the customer was doing. To get their attention, I probably would have had to try and walk off with an HF rig. Otherwise, the only time they ever talk to you is when you are making a purchase. The only reason I still buy there is because of convenience. (Lots on display...15 min. from home.) Sometimes I regret it.

I found that obsolete books at Radio Shack, although on display, were not
in fact saleable as the order entry computer screen clearly showed the
expiry of the titles and the salespeople obeyed the screen.

>
>How do you handle a repeater that requires a PL tone on the input but does
>not transmit with a PL tone. I have a Kenwood TH 79ad HT and there are at
>least two repeaters in my area in the 2m band that do this.

Bob, I also have a Kenwood TH 79ad and own a 2meter repeater that cannot transmit PL. I run a 103.5 PL on the input.

On the TH 79 you have the option of selecting CTCSS (encode and decode - if) you have the TSU-8 unit installed) by pressing the function button (A) first, then the ctcss button (3) next. Or you can select TONE (encode only) by pressing the function button (A) then the tone button (*) next.

>I looked in the Kenwood manual and I did not see a way to set the CTCSS
>function on just the input but not the output.
>

The "TONE" function is covered on page 34 of the manual, and the "CTCSS" function is covered on page 47.

>Am I correct in my suspicions as to what is going on here?
>
>Am I missing something, is there some easy way to make this work?
>

Make sure the CTCSS function is turned off - the "CT" does not show in the display above the last digit of the top frequency or below the last digit of the bottom frequency.

If you select the "TONE" option, along with the tone frequency, repeater frequency and offset while in VFO, then write it to the memory position (using function - MR) where your original repeater frequencies were stored, you will only have to do it once. If you select the "TONE" option when in a memory position, the option will only work as long as you stay on that one memory. It will reset to the original information when you change and return to that memory position. Clear as mud?

>I'm new to amateur radio so if this a simple minded problem I apologize.
>Any help would be appreciated.
>
>Bob

Well, you bought the best H.T. for your first one. I have a Kenwood TM-733a mobile in my car and use the TH-79 as a "remote" to control it. I can put the mobile in cross-band repeat, change frequencies, change power settings,

etc. from my HT! The controller on my repeater has DTMF and alphanumeric paging capabilities, so I can send private pages-messages through the repeater, then through my mobile and to the HT. Makes it possible to communicate no matter where I am.

Good luck with you gear.

I think you've actually already listed the single requirement.

Now that takes care of FCC's requirements.

Some states have additional requirements that may come into play
though. In CA, to be a RACES member, you also have to register
as a DSW which requires takeing/signing a loyalty oath. I'm
not certain of all the legalities on this one(not being a
lawyer ;-), but I'd guess that this means U.S. citizenship
is required for CA DSW registration.

RTTY uses Frequency Shift Keying, i.e. 0 is one frequency, and
1 is another frequency. Thus, a carrier is sent out at one
or the other frequency representing the data format. So...it
uses CW but changes the transmitting frequency.

Ok. But realize they're going to self-discharge in storage.
Lead-acid batteries need to be stored charged, preferrably dry
charged, but NiCads don't need to be charged for storage.

>I've been told to discharge them fully before storing.

Ok, that's how they're going to wind up anyway after self-discharging.
You can put them away in any state of charge, but if they are stored
for a long time, they're going to wind up discharged anyway. That's
fine, they don't mind.

>I've been told to leave them continuously plugged into the charger
>when not in use.

No. Any time you are reacting the chemicals, you are shortening
the storage life of the cell. Like many other chemical systems,
just keep them in a cool dry place, charge them fully and slowly
before use, and they'll do fine.

Now you may want to periodically charge lead-acid batteries in
storage, they'll sulphate if they go flat, but NiCads don't
have that problem.

>can someone please explian the CARRIER of a normal RTTY <baudot>
>transmision?
>is is a continuous carrier, or an on-off one?

Well in a sense it is neither. During a transmission the RF output of the transmitter never changes in amplitude, but it shifts between two discrete frequencies. One frequency is called the 'mark' frequency and the other is called the 'space' frequency. Characters are made up of combinations of marks and spaces sent serially according to the Baudot code.

When a RTTY station is idling, it may send a "diddle" character pattern, or it may stay at continous mark frequency.

>little too far. I've been to hamfests where people are selling used books
>all the time.

OK so far...

>But then again, RS is pawning them off as new, and charging
>new proces for them...

Wrong. The books may be outdated but they are not used. They are
new books.

BTW, from an educational point of view, it doesn't make a difference
whether the books are outdated or not. The scientific material within
is identical. The only time using the outdated books makes a difference
is if you have no intention of learning the material and just want to
memorize the test questions. If so, why not simply ftp the questions?

When I took the advanced exam last year, I used a book dating from a
2 or so revisions back. Who cares? I saw a few questions I hadn't seen
before but since I actually learned the material, I got the answer right
anyway.

Incidentally, the parts about FCC regulations change from edition to
edition of exam questions in the sense that the material that the
questions are based on different material. I don't know about the RS
books but the ARRL books I am familiar with don't even cover the
regulations and refer you to the FCC Rule book. My strategy? I guessed.
Most of the time I got the questions wrong. It was an acceptable loss.
Besides remembering the band edges is meaningless trivia until you get on
the air and if you are not sure where you are allowed to be, just look
it up. I have ALL the useful tables from the various texts in laminated
sheets sitting right next to my rig.

It isn't just AES. The last time I went to Barry's in NYC, I got totally ignored. Two to three salesmen were busy trying to sell a number of ham HT's to a South American. Besides the HT's, they were also pushing virtually every accessory known to mankind because they were "absolutely needed."

The customer explicitly stated that he wanted to use the HT's for hospital use and didn't know that much about radios. They wanted to put together a pager system.

The salesmen didn't bother to mention that the HT's were illegal to use in the US for such a purpose and that the customer should check to see the legality of its use in their home country. They also failed to question the applicability of HT's to their application Business ethics? None whatsoever.

Disgusting.

What your getting is APRS stations. There is a nationwide network of
these stations on 30 meters. You should be able to pick them up on
packet using 300 baud.

Are we talking about long term strorage, weeks, months? Or just a few days? Do not store them on a charger in any case. That will ruin them.

It does not matter if you store them charged or uncharged. After long term storage you will probably notice an apparent loss of capaicty. This is due to what is sometimes called "passivation", a crystalin formation on the plates - it actually helps to protect the plates. It takes a couple of charging cycles to remove it. They should then be fine.

Some people say that you should turn the batteries over every week or so during long term strorage - to keep the electrolyte from pooling. I don't know that this is really a problem unless you are talking about warehousing these things for months.

: AES is very arogant. That is why I now buy all my equipment from
: Burghardts(sp?) or R&L locally. You can have AES.

I've had just the opposite experience. A few years ago I went
to R&L looking for a TNC. They didn't have the one that I wanted
but I was going to get my 2nd choice. They wouldn't accept
my credit card because I had returned a radio about a year before
that after 1 day. I used the radio for a grand total of perhaps
1 hour. I understood there may be a restocking fee and I
was completely willing to pay that without question. HOWEVER,
that's not what they did. They took the radio back but
they considered it a "threat to stop payment" so they wouldn't
take my credit card. Jackasses.

I went out to the phone booth in front of the place, called
Information, asked for the number for AES in Wickliffe and they
had the TNC I wanted and had it to me in perhaps two days.
They have ALWAYS been polite and helpful with me. Particularly
Wickliffe but also certainly Milwaukee.

About the only trouble I ever had with AES was when I sent
some books to my grandfather they changed my shipping address
in the computer and I had to retrive a Yaesu FT-411 from
my grandfather.

Interesting point on property values. It seems this is the key to the
issue. Well I have one example. A local ham listed his house in a number
of ham publications. With in two weeks of the ad coming out he sold the
house for the asking price which was $3K above the normal asking price.
Since your property value is tied to the comps for property around you this
ment there was a net increase in property value due to the existence of a
tower and antenna. I realize this is only one case but a may indicate that a
tower and antenna have either a null or plus affect on property value.

THE AN/PRC-25 radio is not a walkie-talkie as you thank it is !!!
In the Army a Walkie-Talkie radio is mounted on the RTO (radio telephone
operator) back's.
The hand held radio is called a Handy-Talkie.
The battery for the AN/PRC-25 is the BA-386. The power consumption was
figured at 9 to 1, 9 times the power to Xmit than to recieving.
The AN/PRC-25 is a tube radio, the solid state version of this rsdio is AN/
PRC-77. They both used the same battery, anntenna's, and handsets.
As I rember the operate from 30-32Mhz to 72-75 Mhz band

Batteries are avialible or If you have some dead ones, they can be convered/
built to Ni-Cad packs. You need the old ones for for the power socket to plug
the battery into the radio. The battery drops into a watertight compartment
in the lower half of the radio.
The radio was developed in the mid 1950's and was replaced by the AN/PRC-77
in the mid to late 60's. The range is about

OK. Now we're getting somewhere and not just reminiscing about how
prepared we were for the test (like a previous poster...)

If there was no intent to rip the public off, these books would have
been pulled, especially after having their "error" pointed out to them.

I guess we can chalk this up to another RS Ripoff...

Hello all!!

My name is Mike Whaley KD4UGI, and I would like to ask for help from the readers of this group with a worthy cause. I am a Technical Specialist with the Astronauts Memorial Foundation at the Center for Space Education at the visitor's center at the Kennedy Space Center. AMF is a non-profit independent organization that was originally set up a month after the Challenger tragedy to honor all U.S. Astronauts who have given their lives in the line of duty. As a living memorial to them, AMF operates the Center for Space Education. We basically take the latest in Instructional Technology (IT)... computers, software, etc... and teach educators how to incorporate it into today's classrooms. It is quite a comprehensive program, after an educator goes through a workshop they have been instructed in everything from basic computer troubleshooting and repair (hardware and software), the use of software of all descriptions, and how to use this technology effectively so that really improves the education of their students rather than sitting unexploited as often happens at many schools who don't know how to use it. We typically teach three teachers from every school in a district, right now we focus mostly on Florida but work in conjunction with NASA education programs and others so that we see quite a cross-section of teachers from all grade levels, subjects, and locations. I work on the Instructional Technology Evaluation Center, which is a large computer lab with 10 Macintosh and 7 PC platforms that allows us to both do training and to allow educators to "test-drive" all sorts of educationally-related software and determine its suitability to their needs before spending shrinking budget money on it. This is a free service open to teachers, and is supported by the donations of many software and hardware vendors. If you are a teacher and want more info about any of this, please call AMF at the number below and we can tell you more details!

I think it is important to point out that even as comprehensive as our programs are, there is NO COST to the participants, other than the costs they incur in travel, lodging, and for substitutes at their home schools. AMF is supported by the funds from the Florida Challenger license plate program and from private donations. We are not a government agency, we are entirely independent although we have working partnerships with many organizations and businesses.

I am posting this to r.r.a.space because I now have a unique opportunity to start a Shuttle Amateur Radio Experiment (SAREX) station there. I am sure that most of you are familiar with SAREX contacts where students get to ask questions of Shuttle crew members, but in my view it would be even more useful and lasting to get the teachers fired up about amateur radio,

space, and technology because they can then pass it along to hundreds or thousands of students. I have approval from the powers that be to do this project, however, with all the other educational projects that are ongoing I need to get as many donations of equipment and help as I can before we think about spending a lot of money. (Ie, only buy things that we can't get donated or permanently loaned.) As the only ham currently working at AMF, I am far more familiar with this than my co-workers, although myu boss does know about it and has seen a videotape of a SAREX school contact, and is supportive of this project. Basically, I would like to get a good start (by getting not only equipment but volunteers to assist with this project) before I push for significant sums of money. I believe that once we have the capability of making contacts, not just SAREX but Mir, satellite, and terrestrial, then it will become obvious how valuable a tool this can be to get teachers interested.

For anyone out there who may be considering donating, remember that this will be in a very high-visibility location... the KSC visitor's center is the third most-visited attraction in the state of Florida. So of course, the publicity value for companies is significant. (We will be sure to publically acknowledge any assistance given us.) This is in the formaticve stages right now, I have some ideas about specific equipment I would like to use but I will consider anything. At minimum, right now we need a 2-meter radio, a satellite antenna and the associated rotators and mast, coaxial cable, and an amplifier to put out 150 watts or so if the radio won't do that. Of course, I envision having a much more complete/capable station than that, eventually we would like to have a special event station to commemorate the return-to-flight after Challenger so a full-blown station is something to look forward to. But for now, my main goal is showing that this can work, and that should open up doors and allow it to expand.

Thank you, and please feel free to either e-mail, call, snail-mail, or visit!

We're looking at a building lot that's within 1/4 mile of some high tension power lines. How much noise do those suckers radiate? Is it mostly HF or do they get into VHF/UHF? Is there any weather-related noise from them?

>I sometimes wonder how the salespeople there put up with some of the
>customers these stores seem to attract once in a while. I'm sure it's the
>same with AES.

the point is that the phone sales seem to be OK, but since they have a
store you can go to, and you go to the trouble to get there, that they should
have someone around to handle the walk-ins in a courteous and professional
manner...or just do everything over the phone and drop the pretense
and expense of having a store front. AES is an hour drive from here and
i have to add in sales tax (cheap ham part showing through..)

and i agree, we hams seem to have more than our share of "crybaby"
customers...i've seen a guy bring a radio back to a store because he
didn't know you had to twist the BNC coupling ring to get the antenna to
lock onto the radio....

yeah, yeah, but the usual problem with AES O'do is that there's a line of
people on the counter taking phone orders..(fine) and no one really assigned
to handle the walkins. that's what's missing...the phone calls are sales
ready to be made and so they are more desireable than spending time
qualifying if a person in the store is really going to buy or not.

if you deal with them on the phone, everything's wonderful...but sometimes
it's neat to try first.

I wonder about the economics of Amateur Radio stores. I mean, I guess in NYC where there's only Barry's (although I have seen old Yaesus and Icoms sold in electronics stores on 42 St), they would command the whole market, and yet they don't take advantage of that at all, rather instead hanging on the brink of bankruptcy all because of their standard operating sliminess.

To be fair, however, I was greeted the last time I walked into Barry's with a "If you need any help, I'll be right there with you."

Conway--next time you're in Bklyn say "hi".

Hi y'all
from an AP report in the (Manchester) New Hampshire Sunday News...
"State police in New Hampshire knew something strange was going on
when they heard orders being drawled out over their radios. ...
"An unusual weather pattern that stretched from the south plains of
Texas to the northeast is believed to have carried the the transmissions
from Lubbock's primary police dispatch frequency more than 2,000 miles to
New Hampshire.
"Lubbock police had no idea what happened until they received an
unusual teletype bulletin at their communications center Wednesday.
"'Good evening, Lubbock,' the message read. 'Just thought you'd like
to know how incredibly good your radio system is. You are sooo loud and
clear in New Hampshire that you are overriding our units.'"
The story continues for two more paragraphs with an brief
explanation of what happened from the manager of Lubbock's radio shop.
Were any readers of this news group able to take advantage of this
ducting?

I didn't see the original message (the ham newsgroups expire fast at
this site) so my comments re tone generation may be superfluous.

What Gary says is correct for HF. On VHF FM, the carrier is modulated
with an audio tone, and the tone jumps between two discrete audio
frequencies - and the Mark tone is the higher frequency.

One technique for generating the two different frequencies on HF radios
is to plug the audio tone generator into the mic jack - just like on
VHF. You do have to watch the purity of the audio tones, and ideally
you change frequency during the zero-crossing instant of the sine wave
of the tone - this reduces distortion.

I was told years ago that the reason the two tones are called mark and
space is that an early machine had a pen that lifted and dropped
over a moving paper strip and one tone caused a mark to be made on the
strip for the duration of the tone, and the other lifted the pen,
leaving a space: hence "mark" and "space".

PS - anybody want a Model 15 (complete with built-in ribbon reinker
kit) and a model 14 reader and a model 14 punch (with original mounting
plate - a rare item!) ? I've got original TTY corp manuals to go with them,
also a spare motor for the 15, and a spare brush kit (brushes and
plate) for the 14 reperf. I think I've also got a 2B reperf - the
printing-only, narrow tape version of the 14 reperf for spare parts.
I _had_ the original 15 table but termites got to it...
All the equipment has under 150 hours on it since complete rebuilds
by a TTY-Corp.-trained Western Union retiree - including a new main
shaft on the 15. The hour meter was something I installed in the table
power panel so I could follow the service schedule recommended by

my WU friend.
All the equipment is set up with true 60wpm gears as opposed to the WU 66wpm ones (I've got a extra set of #74192 and 74193 gears for a 15 - I'll toss them in with the manuals if I can find them).

I'll call a friend - I think he has another 15 in a WU low-noise newsroom cabinet in similar condition. So there may be 2 available.

I hate to toss all this into a metal recycling dumpster. Somebody must have a museum that needs a donation... Or knows somebody in Hollywood that rents historical items to movies... (I haven't been able to find one). SOMEBODY GIVE THIS GEAR A NICE HOME - PLEASE!

So that is the answer! If you want service take your cellular phone
with you and call the counter...
I agree phone sales can be important to these stores but then why do
they lease expensive retail space to run an operation that is so dependent
upon phone sales? Also what makes a caller more qualified as a buyer? A
caller doesn't even have to get his butt out of the Barca-lounger while the
walk-in has made the effort to go to the retail site.
Input from employees of HRO, AES etc. would be very interesting...

> anyway.

Well good for you, Chester. <pats you on the back>
If the FCC decides that they will publish a question pool and someone decides that they can memorize the questions, why not? It's not like it is breaking any rules, you know. If the person wants to knowingly purchase an out of date book, fine. If it is misrepresented, then that is not fine.

> Incidentally, the parts about FCC regulations change from edition to
> edition of exam questions in the sense that the material that the
> questions are based on different material. I don't know about the RS
> books but the ARRL books I am familiar with don't even cover the
> regulations and refer you to the FCC Rule book. My strategy? I guessed.

Yep... there is nothing like knowing the material. Hmmm... I wonder which is better (or worse)... guessing correctly or memorizing?

> Most of the time I got the questions wrong. It was an acceptable loss.
> Besides remembering the band edges is meaningless trivia until you get on
> the air and if you are not sure where you are allowed to be, just look
> it up.

You know... Couldn't it be said that it is ALL meaningless trivia
until you get on the air? I would think that one of the more useful
pieces of trivia IS knowing where the band edges are. Makes it a lot
more convenient when running mobile or when you are at someone else's
station so you don't look like a fool...

> I have ALL the useful tables from the various texts in laminated
> sheets sitting right next to my rig.

Do you take little photo-reduced laminated cards in your wallet to help
you out in a jam if you are at someone else's station?

Gosh...I guess I have been lucky. I'm happy to report that on the
Thursday before Memorial Day (day before CQ WPX CW test) I visited
HRO in Woodbridge Virginia. It was more like a homecoming than
anything. They seemed happy to see me and gave me all the help I
needed. A very pleasant visit. I bought a Diamond X-510 for packet.

1483. Re: 10 meter satellite sub-band

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-24 00:00:00 UTC
From: Ronald Thomas <thomasr@acpub.duke.edu>
Message-ID: <Pine.SOL.3.91.950724081556.4848B-100000@godzilla.acpub.duke.edu>
Source record: 241834

Based on replies I've received, it seems that the FCC allows SSB
phone on 10-meters from 28.3-29.7 continuously. However, some satellite
links occur between 29.3 and 29.5 and some amateur radio operators would
like this frequency range reserved for their personal usage.
I am not aware of any other "unofficial" SSB restrictions on 10-meters,
other than "nets" which also seem to feel individual frequencies are
reserved for their personal use. Am I missing any?

Help please,

I have a 900MHz power amp module, purchased new at a flemarket.
It looks like it bolts onto the back of a rig, as it has large heatsink
fins on one side.

It has the following printed on the PC board,

MULITPOINT NETWORKS
900MHz POWER AMPLIFIER
PC100033 Rev. 1/C

It has 2 RF connections, and an 8 pin header (next to a trim pot.)
Is anyone familiar with this module, especially the pinout of the
header?

I would be very grateful for any info on the unit.
Thanks for your time,

No, because the commercial units are used every day, so they're never
stored. Rather, they are used all day and charged all night.

I think this perception is what is wrong. It is easy to call a ham store on the phone to ask about a price; that's not a qualified customer. A customer that comes into the store usually comes in to buy something. A a former retail salesman (20 years ago) the customer in your store is inherently more qualified than the one on the phone.

As for the assignment of clerks, I am sure AES is not telling those people that their job is to answer the phone; I'll bet their job is to sell to customers.

Along these lines...I have a question. My wife and I took our exams on the first of the month and I checked fcc.gov nightly for the updates. When I got the updates for the 6th I did a search for Deaton and only found my wife. After a closer look I discovered my name had been mistakenly entered as Daton. Due to the fact that it had been 'just' issued I called the FCC to see whether they'd want a 610 to correct it. They said call the ARRL VEC office and they shouldn't have any problem fixing it. Well...I did and had a nice chat and was jokingly warned that I may end up with 2 callsigns but other than that, the problem would be fixed. Unfortunately it's been over 2 weeks and my wife and I have since received our licenses (mine incorrect). Does anyone know whether a slower method is involved in correcting mistakes and I should simply wait? Or is another call in order? I realize that only 6 months ago....>6 weeks of wait was not uncommon. BTW...unless things change I'm a happy TechPlus -- KC5PRQ

Hi,
What you are missing is "Gentleman's Agreements." For example,
the FCC permits CW in the entire 20 meter band. The phone band starts at
14150 kHz. But you won't usually hear any CW above 14060 ... by
gentleman's agreement, the freqs above 14060 are occupied by the more
advanced digital modes, and the CW ops leave them clear. You probably
won't hear a lot of any US operations between 14100-14150 because by
gentleman's agreement, we stay clear to let the other countries with
'phone privileges in that band section use it for SSB.
Also, by gentleman's agreement, the SSB section between 14150 and
14240 is called the "DX window". (The big DXpeditions usually transmit on
14195 and listen between 14200 and 14220.) 14230-14235 is the "SSTV
window" in the same sense, but isn't recognized as widely.
So it goes with 10 meters. The satellites are up in orbit and we
can't change their downlink bands. I'd expect the same "gentleman's
agreements" to take place there, especially in light of this fact. I've
become very active on RS-12 lately, and personally haven't experienced
any interference at all there, but I'd like to see it at a minimum if it
does occur. I DO respect all these other "gentleman's agreements"!
So let's all try to be gentlemen (and gentlewomen).

73, Zack W9SZ
Catch you on RS-12 !

It's on page 14 of Aug 95 QST. There's a photo of Stu Hanebuth, KB0QXR
and Tim Koeth, N2LPN, of the Rutgers ham radio club, with their setup.

They had a QSO over a distance of 12 cm on the freq of 285.1 THz
(285,100,000,000 GHz) using small radioactive cesium-137 sources to emit
gamma waves.They used scintillation detectors and portable ratemeters as
receivers, and "keyed" them with a lead shield.

Now, that's DX! :-)

As the caption ends, "Any challengers?"

A friend of mine has a noise problem with his Toyota Camry and his 2 meter Kenwood 231. It sounds like alternator whine but is only there on receive. Toyota installed a new alternator under warranty but that made no difference at all. Various chokes have been tried but they all had no effect. He tried a magnet mount antenna on the trunk instead of his normal permanent roof mount 1/4 wave. Still no difference. An intermod filter was tried that had been very effective with computer noise on a Chrysler but that made no difference at all. Apparently disconnecting the antenna gets rid of it so it must be comming in the power lead. Any ideas please?

:
: Well, by now I would definitely call you stupid. You have never been into a
: pile-up, I gather from your statements. You have never had the chance to
: prove in reality that your so beloved digital modes are so superior. So why
: do you ramble on endlessly about theoretical possibilities.
:
: PROVE what you want to tell us. Prove a 200 QSOs per hour rate with a
: digital mode. Show us the QSL-cards, confirming your digital contacts with
: 3Y0PI, 9M0S, 5A0A and other real dx and then we can start a discussion. But
: arguing about dx without knowing what dx is about in reality is stupidity,
: stupidity, stupidity. Think about it.

The main reason that digital modes have not had a chance to show their metal is that the majority of DX'ers abhoar them and just don't like to use it. Digital modes don't work in a pileup, since they don't get into them in the first place. Take a look at some of the shared channel satellite work being done for the LEOs, it'll work for HF digital, and should work really well.

:
: I will be active from San Andres, HK0, next week. I promise, you will not
: be able to establish a contact with me other than CW. You can try to
: imitate CW with a computer and nevertheless you will not have a QSO. I
: would not ignore your callsign, but you would be lost in the pile up,
: because it takes a little more than just switching a computer on to work a
: dx-station. It takes skill, experience and dedication. In one word, one
: needs to be superior (not in terms of big amps and antennas) and we have
: had that term in a different context before, Gary, didn't we?
:

This symbolizes the crux of this arguement. Getting QSOs is a personal gratification activity. A digital mode would take a lot of the fun these people have doing it. What they miss though is that CW is not the best mode for communications in general, and many of us don't like

doing it. Kinda like a bicycler and a driver. I do not enjoy bicycle riding, but many do, and find it rewarding. So I'll drive and they'll ride.

>- Jay, KE3AT

Jay, I once owned a KSR 33 Teletype, which had the letters arranged on
a cylinder. The hammer had a rubber pad on it, which would strike the
letter on the operator side of the cylinder, pushing the cylinder
(and character on the back side of it) into the ribbon and paper.
The rubber was necessary to distribute the force over the character on
the operator side, so as not to damage that character, and yet give
the cylinder a big enough shove to make character on the other side
strike the paper with enough force to leave its mark. The idea is to
distribute the striking force over a broad area, so that the
character facing the operator isn't damaged. (I'm being redundant again.)

The best thing would be to find a junked TTY and take the bumper from
it. If you can't find one, I recommend you carve up a big eraser, but
I imagine you will need more durable material than that. Good luck.

>the autopatch call?
>Jerry Wang (ke6uux)
>

Yes. since your friend doesn't have a license, you must be close
enough to the radio to keep control (be next to him). It's then
legal for him to give your callsign and make an autopatch call.

However, since others listening to the repeater will no doubt recognize
your call being given by someone who doesn't have your voice, the
repeater control operator may think it's bogus, and terminate the call,
and proceed to read you guys the riot act. To avoid this unfortunate
situation, I recommend that you give your call, and say "accessing
autopatch with third-party traffic". That will tell everyone listening
to the repeater to expect new voices and names with your call.
It's advisable for you to personally give your callsign when the
call is over, again specifying third-party traffic.

Hello, I recently purchased a very small CCD camera which can be powered by a 9 volt battery. I would like to install it in either a R/C plane or R/C car and have it transmit the signal back to a video monitor. Since I have not been into ATV I have no idea what kind of equipment I need for such a venture. If any hams out there are into ATV and could assist me with this it would greatly appreciated..

Thank you, Smitty

>They <R&L> took the radio back but they considered it a "threat to
>stop payment" so they wouldn't take my credit card. Jackasses.

Thanks for passing this bad attitude along -- I now know R&L is
another dealer to avoid. Speaking of dealers to avoid...
In the AES shops in Orlando, Wickliffe, and Las Vegas I met some of
the biggest jerks ever. These guys were too busy to show a customer
a radio, or answer a question, or even take my money. Geez, what a
bunch. Most recently, the guy I dealt with in Vegas did not think
much of my choice of equipment make, and he told me what I could
buy. Even tho they are a dealer of the desired units, he wasn't
going to sell them to me. Oh, no... he knew what was right for me.
Needless to say, I left without making the purchase.

I particularly liked the sign posted in the Orlando AES store -- it
said "This is not a ham club - NO LOITERING!" That shows you their
attitude...

I mail order from the Milwaukee AES office sometimes, but even then
I've had some odd troubles.

Zack,

Wat sort of equipment would be needed to cover real DX?
Is there a risk of unwanted side effects? there are so
much fears about EMC recently...

Looks like they have been transmitting out of band though. I hope the
authorities are dealing with the matter. Or, if these frequencies are
free to use, this may be an option for a CB-allocation.

Similar experience with HRO in New Castle, Delaware. Very helpful
salespeople with good attitudes. They're convenient to me as I travel
between work in Philadelphia and home in downstate Delaware, so I'd rather
drop in and browse the goodies than just order by phone. Only problem is
they won't stay open late on Fridays (just for me). :^)

Or,

as you surely wanted to say, some people wish it was not true.
However, what is the better mode? Don't tell me it is CCW, this one
turned out to be disappointing in practice.

As to Clover, it may be fine for transferring longer texts,
but for DX? By the time two computers agree on the baud rate
and other protocoll details, a CW operator has made a few contacts.

Don't get me wrong, I am not a CW fan at all, but have to use
this mode frequently, because others fail.

I have lived in Mission Viejo, CA, an area with really tight restrictions. I have also been a ham for about 10 years. I found that the restrictions on ham radio where not that restrictive if I was creative. I worked a ton of DX on a ground mounted vertical. It could not be seen from the street but the two story house next to me could see it from upstairs. I worked out a deal, and it stayed. CC&R's are enforced by your neighbors, so it is a good idea to get along with them. They may not try to "get" you on a antenna that is well hidden. They may go after more enforcable items, such as your grass, or color of house, or where you park your car.

I am not really the nices guy to talk to about this issue. I am pro CC&R's and I feel every neighborhood should have them. I don't like the idea of my neighbors effecting my property value and safty of my neighborhood. Most areas that have them are to expensive for the rif raf to move in. However one dose see lazy home owners, hams being the worse. Hams talk on the radio and forget to mow the lawn. Seen it many times.

The safty issue is really big with me. For example in Mission Viejo one is not to park cars on the street or in the driveway. Visibility is very good, keeping one from running over kids on a bikes. Seen that one too. Also by not haveing oil dripping on the street, taxes are kept down and streets are in good repair.

I could type for hours on all the advantages that CC&R's have. When one has studied and sat on home owners boards such as myself, one can really see how small of a issue ham radio really is. We never went after someone that took measures to keep antennas under control. In short the tower thing had to go. A well placed ground mounted vertical was not really a big deal. All I had to do was build and sign a paper that said I would keep my veritcal in good repair so that it would not blow apart in the wind and hurt someone or something.

I hate to brag but the area I lived in was a perfect example of hams and neighbors living in a upper middle class area together. Anyone can do it, it all rests on ones attitude.

1507. ICOM IC-RC1220 repeater question(s)

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-24 00:00:00 UTC
From: Chris Oesterling <chris@angus.mystery.com>
Message-ID: <9V0q9c1w165w@angus.mystery.com>
Source record: 241908

Hi,
I have an ICOM IC-RP1220 repeater with a CAT300DX external
controller. It works quite well now. (Thanks to several nice
HAMs in this newsgroup). I still have a few questions that are
related to the ICOM.

1. The LOCAL Inhibite when powered up defaults to "off". Is
there any way to have it default to "on".

2. The COR output pin works based off squelch opening or
closing. The repeater can do the CTCSS decode but the COR pin
is not effected. Is it possible to have the COR reflect not
only that the squelch is open but also the correct CTCSS
tone is being received?

As usual, thanks for the help! - Chris N8UDK

Charles (KG0QK),

With all the other complaints about ham stores - I agree with you.

I went into HRO in Denver on a saturday morning - busy. Three workers and
eight customers, or so. When I entered the door. The guy behind the
counter said, "Good morning. If you need any help, let me know." And so,
I did. In about two minutes I was out of the store with the items I
wanted, including a mag-mount base for the rental car (to mate to the dual
band antenna I was packing). I went out to fit the mag-mount and thought,
a right angle BNC to S0-239 would be nice. So, I went back. When I opened
the door. The same guy looked up with a quizical look. I said, "BNC to
SO-239, right angle?" He said, BNC to SO-239, but not a right angle -
sorry." I waved and was gone. Including tempory antenna installation,
about 5 minutes.

Guess I'm a lucky guy,

Jerry,

What I do is annouce the call "KF0OS for the Autopatch" or something like
that. I then dial and whatever (or let the other party do that) and let
them talk. I usally terminate the call with appropoiate announcement. I
do all this while maintaining "control" of the station. I usally do this
so my kids can talk to mom. I don't say "KF0OS with third party traffic"
as I believe this is confusing with "third party" agreements. It's my
voice at initiation and closure. Never had any problems.

It possible (legal) to be near and in "control operator" range, let the
other person do all the announcing (your call sign), place the call, and
terminate with announcements. But, someone may get concerned when they
don't hear your voice and what to know who's controlling your station.

Ne> were 5's. Oh well... P.S. Tell me your CW sob stories to help cheer
Ne> me up !

Everybody has days like that. Learning any type of new coding for the
language you've used all your life can be frustrating. Your mind wanders
to the easy, rather than crossing over to the new. Think back to grade
school when you tried to learn a number base other than 10. Some caught
on quickly, others floundered a bit, but eventually everyone should
have caught on. At least enough to pass the test <G>.

Personally I love CW. Operate primarily CW tests. BTW you will always think
H's are 5's, depends on the speed.

Excuse me Brian, but -

I would never be so rude. Is this the same type thinking that jams repeaters or sends carriers without modulation until they feel they got someones attention?

Walt / KF0OS

PS. If I owned a store (kind of like the old west days), I'd have the sign posted saying "I have the right to refuse service to anyone for any reason." Persons interferring with my telecommunications would be one of those reasons. If they raised a fuss, with the help of the police, I'd simply have them removed and asked not to return. That ever happened to being nice?

Now THAT is the way a ham radio store should be run-- actually, any store.

Fast, courteous acknowledgement and service-- Product knowledge, at least
to the point of knowing what is stocked.

From the sounds of things on here, Walt, it looks as though you may have
just lucked out. I'd sure like to think that it wasn't just luck, though.
This is the sort of service that keeps customers happy for years and turns
them into "lifers."

>brink of bankruptcy all because of their standard operating sliminess.

>To be fair, however, I was greeted the last time I walked into Barry's with
>a "If you need any help, I'll be right there with you."

I remember the only 2 times I was at Barry's, it wasn't a very pleasent experience. The first time I went it was a couple of days before I would try to get my Novice license (back in 1990). I was asking some questions about HTs (Yaesu 470 comes to mind). I asked the salesman (who was a ham) about the difficulty of the cw exam, and then I left. I returned the following week, after passing my novice test, and he immediately said, "oh, here comes the one who caused so much trouble last week." I looked around, and then left and I haven't returned. Right now, I have mail ordered my gear through AES in Mil. without a problem.

I am considered a JRC JST-245 as my first HF rig, and the purchase would probably be through Gilfar in Park Ridge, NJ. Does anybody have any experience with them?

Thanks.

Source record: 241922

There are a number of ways to send RTTY (Baudot), but the most common
method used is frequency shift keying (FSK). In this method a contin
is transmitted. The frequency of the carrier is shifted slightly high
frequency depending on whether a mark or space is being transmitted.
amateur practice, the total shift between mark and space is usually 1

Another method of transmitting RTTY is by "Audio Frequency Shift Keyi
method FSK is "faked" by using an SSB transmitter, and rather than sh
carrier frequency of the transmitter, it is fed an audio signal which
shifted. Assuming good linear treatment of this audio, the transmitte
sound just like traditional FSK at any receiver.

The big problem here is one of cash - yes, we could replace the logic, and we'd very much like to, but new logic isn't cheap. If we take the cheaper route, and start to develop our own, that takes time. We have a working box, and we'd like to get it on the air, then start an upgrade program.

ARLB072 ARRL Board of Directors

ZCZC AG39
QST de W1AW
ARRL Bulletin 72 ARLB072
From ARRL Headquarters
Newington CT July 24, 1995
To all radio amateurs

SB QST ARL ARLB072
ARLB072 ARRL Board of Directors

The ARRL Board of Directors met in second session, in Rocky Hill, Connecticut, on Friday, July 21, and Saturday, July 22, 1995. Major actions taken include the following.

The Board of Directors expressed its gratitude to past President George S. Wilson, III, W4OYI, for his many years of dedicated service and conferred upon him the title of ARRL President Emeritus.

Dick Jansson, WD4FAB, was named recipient of the ARRL Technical Merit Award for his contributions to Amateur Radio through his work on amateur satellites.

Philip A. Downes, N1IFP, was named ARRL Professional Educator of the Year for 1994. Charles S. Ward, KJ4RV, was tabbed as the ARRL Professional Instructor of the Year for 1994. Chris Townsend NU7V, won honors as the Herb S. Brier Instructor of the Year. Karl Lambert, KB4DCR, won the Excellence in Recruiting Award.

The Board selected Dr. Ulrich L. Rohde, KA2WEU, as the recipient of the Technical Excellence Award for his series of articles, Key Components of Modern Receiver Design, which appeared in the May, June, July and December, 1994, issues of QST.

Joseph Phillips, K8QOE, and Michael Karp, AF2L, were named corecipients of the Philip J. McGan Silver Antenna Award for 1994. The Board thanked all amateurs for their public relations efforts throughout the year.

The Board approved the institution of three year terms for ARRL Directors and Vice Directors, to be implemented in accordance with a transition schedule beginning in 1998.

The Board directed that the ARRL staff create a plan, including a budget, for the creation of standardized testing procedures for consumer electronics equipment to ascertain their degree of immunity to RF interference.

The Board declined to have the ARRL participate actively in the recently created corporation of volunteer examiner coordinators.

The ARRL will produce a handout aimed at new hams, explaining the concept of band planning, and will include approved band plans.

Changes were made to the operating procedures of the ARRL Awards Committee and Advisory Committees. Membership of the Awards Committee was reduced to six members. An ad hoc committee was created to review the terms of reference and operating method of Advisory Committees.

The Board adopted a resolution thanking NASA for its continued support of the SAREX program.

Details to follow in September QST.

Message-ID: <3v0nrt$3qr$1@mhafc.production.compuserve.com>
Source record: 241928

My first answer really got farkled. Let me try again, and also remove assumption of HF operation.

There are a number of ways to send RTTY (Baudot), but the most common method used is frequency shift keying (FSK). In this method a continuous carrier is transmitted, based on some "center" frequency. The frequency of this carrier is shifted slightly higher or lower in frequency depending on whether a mark or space is being transmitted. In amateur practice this shift is 85Hz (for a total difference betwee mark and space of 170Hz.) Other services (and some amateurs) use other shifts such as 425Hz (total 850Hz).

Another method of transmitting RTTY is by "Audio Frequency Shift Keying". In this method FSK is "faked" by using an SSB transmitter, and rather than shift the carrier frequency of the transmitter, it is an audio signal which shifted. Assuming good linear treatment of this audio, the transmitted signal will sound just like traditional FSK at any receiver.

Because the terminal equipment at the receive end is typically lookin for derived audio centered on some frequency (typically 2125Hz), this AFSK mode can be adopted to FM transceivers. In fact, this is the method used (with a wider shift) in VHF packet networks. Most "multi-mode" TNC's such as a PK232, etc, use this method in VHF Baudot (RTTY).

<lotsa stuff deleted>
> I'm new to amateur radio so if this a simple minded problem I apologize.
> Any help would be appreciated.

What you describe is relatively common around here (the Dallas-Fort Worth Metroplex).... in actual practice, if not in design. For example, by the time a repeater's audio signal goes from the receiver, though the controller, into the transmitter, it's not uncommon for some low-end frequencies to be lost, or attenuated to the point where they're not very strong at all, effectively negating the PL output on the repeater. Some repeaters regenerate the PL on the output.. others don't.

What I wind up doing is not programming the HT (I've got a Yaseu FT-530, but most of 'em work basically the same) to require tone squelch on a received signal. That way, you might hear some intermod every now and then, or you might hear some clueless person on the output yelling for help since he doesn't know the proper PL code to bring up the repeater, but you will hear the repeater whether it's transmitting the PL or not.

1529. International calls on CD-ROM?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-24 00:00:00 UTC
From: jahern@uoknor.edu
Message-ID: <3v0lp7$km2@romulus.ucs.uoknor.edu>
Source record: 241930

73,

I am interested in buying a callsign database on CD-ROM, but only if it contains a pretty good percentage of international calls. The reason is that I have good net access, so I can access up-to-date US callsign info via the UALR server, so I would use the CD primarily for foreign calls.

I have an old HamCall CD, and it is VERY limited with regard to foreign callsigns. Which CD would you,[the collective net/ham brain :-)], recommend, if any?

BTW, I read somewhere that the reason Buckmaster didn't have many international calls on their CD was that many countries do not allow redistribution of their callsign database in digital format. Any comments on this?

I'm sorry to say that I have equally bad feelings about AES. I am a LONG TIME (16 years) customer of AES and have always found them to be quite professional until today. I was interested in a piece of equipment listed in their Summer 1995 catalogue and noticed that it was listed on 3 separate pages with two different prices that varied by over 10% ($399.95 to $449.95). I asked what the correct price was and they told me $449.95. OK I thought, let me call HRO and see what the deal was over there.

This was the first time I have ver done business with HRO. The salesman there told me they had the unit in stock and the price was $399.95. I called AES back and explained the situation to another of the sales-droids over there and was told that the price was $449.95...end of story. I explained that i was a long term customer and merely wanted to give them the right of first refusal before I went somewhere else to do business. The sales-droid couldn't care less. Myself being the owner of my own company woudl fire anyone with that attitude on the spot. My business depends on referrals for the lion's share of my new clients...all I need to cripple my sales growth is an employee that doesn't give a damn about the customer.

It's too bad they have such a bad attitude. I will certainly call HRO first in the future.

The PRC25 operates from 12v. I used a VHS port-pack gell cell.
The radio is interesting, but don't pay too much. A typical 2M ht
will outperform it under most circumstances.
The other rub it the PRC25 is a wiiddeeband radio. I have not checked
latly, but I think only narrow fm is allowed on 6Mtr.
The PRC25 is usefull to listen to VHF tv audio. It was usefull for
listening to the old British vhf audio... I gave mine away after
I bought a Pro2004.

This is an interesting too from the standpoint that J.P. AA2DU was a customer
for 16 years, then I would I be wrong in guessing that the 16 years was met
with positive experiences and now one bad experience? My point is that I
can't believe AES or HRO or Burkhardt or Ross or any other will stay in
business for year after year if they mistreat their customers so universally
and so consistently. Maybe I'm lucky, because I simply haven't been treated
all that badly. Sure the salespeople have a bad day now and then, but for
the most part, I've had no problems.

I've especially admired HRO for their willingness to help sponsor expensive
DXpeditions that many hams enjoy working.

> Certainly is a quantum leap forward from HF morse code.

Not really. It's the mariners at sea who need this vital info more than
those of us on land. The difference in cost to receive it now as
compared to before (when only an HF receiver was necessary) is quite
vast.

> "Ideas are more powerful than guns. ..."

Not really. Ideas won't blow your head off.

Jim's perception is actually shared by a lot of commercial (PLMR, etc.)
users. People do think it's OK to "store" the batteries in the chargers in
when the radios are not in use. While this won't normally cause "memory",
it can cause the batteries to be overcharged and reduce their lifespan.
It's not the overcharging itself that causes the problem but the heat that
results from it.

Storing them on the charger is not what the vendors are usually trying to
imply. It just an easy way to show the product. Any documentation that
comes with a radio (if you are going to get any docs at a swap meet) should
give some battery care instructions. Those instructions typically tell you
not to store the radios on the chargers and normally not to leave batteries
on charge for more than about 24 hours.

>"salesmen", you're treated like some kind of jerk for interrupting them.
>Now, I'll either mail order gear from elsewhere, or wait until I go to
>L.A. on vacation. Bye bye AES.

A friend of mine had just the opposite experience. He stopped in at HRO Van Nuys (since moved) to buy a Larsen NMO Mag mount, and was ignored for 48 minutes (after the first 5 he decided to see how long it would take) then they asked him to leave as they were closing. He lives in Ventura, and it would have taken a long drive to come back, so he did a polite chewing out of the salesman for ignoring him, commenting about why people don't go to the store and order out everything mail order. I've had similar experiences.

Two friends of mine have a standard policy: buy from HRO Van Nuys as a last resort. They purchase stuff at the TRW Swap Meet when they can or they buy via credit card from AES Las Vegas otherwise - and the lack of sales tax due to the out-of-state purchase is not the main reason.

1539. VHF TO UHF

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-25 00:00:00 UTC
From: reidj@warren1a.its.rpi.edu
Message-ID: <3v2pmq$bv3@usenet.rpi.edu>
Source record: 241690

My company is operating a radio system on VHF car to car but when we talk to our base they have a VHF radio and a UHF radio tied together to make a crude repeater.
Is this legal to do with a business band freq.

I need to carry a handheld radio whilst skiing/bicycling. Preferably under the neck or the side of torso.

Any advice appreciated on a suitable harness.

Thanks,

Sara.

[ANARTS - Australian National Amateur Radio Teletype Society]

This is VK2TTY VK2TTY the official station of the
Australian National Amateur Radio Teleprinter Society,
which includes all digital modes, with the weekly broadcast
on the following frequencies:

3.545 MHz (Plus/minus 5) 0930 UTC VK2BAT (JOHN)
7.045 MHz -3 0030 UTC VK2BAT (JOHN)
14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)
14.091 MHz 0030 UTC VK2DPM (ALAN)
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2AAB
146.675 MHz (rtty mmbbs/repeater) VK2RTY

ANARTS News Bulletin 868 23rd July 1995

A HEARTY WELCOME TO JOHN, VK2BAT, WHO IS DOING THE 40 AND 80
METRE CASTS THIS WEEKEN (AND, I HOPE, FOR SOME TIME TO
COME!). tHOSE OF YOU WHO LISTEN IN THE MORNING, WHAT ABOUT A
CHEERIO FOR JOHN ON 80M IN THE EVENING? ONE OF THE PROBLEMS IN
BEING A RELAY OFFICER AT THIS STAGE OF THE SOLAR CYCLE IS HOW
TO KNOW IF YOUR SIGNAL IS REALLY GETTING ANYWHERE, AND IT CAN
BE DISCOURAGING IF THERE ARE NO CONTACTS TO LET THE RELAY
OFFICER KNOW IF ANYONE CAN HEAR IT. BESIDES, A NEW HELPER
NEEDS TO KNOW HIS EFFORT IS NOT BEING WASTED. JOHN HAS
ASSISTED IN THE PAST BUT IS NOW AT A NEW LOCATION AND DOES NOT
KNOW HIS EFFECTIVE COVERAGE -- SO HOW ABOUT LETTING HIM KNOW
HOW HE IS GETTING OUT?

WELCOME, JOHN, FROM ANARTS

ADRS SPLITS INTO TWO ORGANISATIONS

AFTER A YEAR OF PUBLISHING THE DIGITAL JOURNAL, IT WAS FELT BY
DIRECTORS OF THE AMERICAN DIGITAL RADIO SOCIETY THAT THE FOCUS
OF THE ORGANISATION HAD BEEN CHANGED BY THE ACQUISITION OF THE
DIGITAL JOURNAL AND, AFTER VOTING WAS DEADLOCKED ON THE ISSUE
OF SELLING THE JOURNAL, IT WAS DECIDED TO FORM A NEW
ORGANISATION. THE TECHNICAL WAY TO GO WAS TO CHANGE THE NAME
OF THE ORIGINAL GROUP TO THE INTERNATIONAL DIGITAL RADIO
ASSOCIATION (IDRA), WITH THE GROUP THAT HAD SPLIT OFF TAKING
THE NAME OF THE AMERICAN DIGITAL RADIO SOCIETY (ADRS).

THE DIGITAL JOURNAL REMAINS WITH IDRA, SERVING ALL KEYBOARDERS AND CONTESTERS -- REALLY NOTHING HAS CHANGED THERE EXCEPT FOR THE NAME.

ADRS WILL CONTINUE WITH THE MISSION STATEMENT IT HAS HAD SINCE ITS BEGINNING 2 YEARS AGO -- ADRS SHOULD BE A FORUM FOR DIGITAL TECHNOLOGY, ACTIVELY SUPPORT NEW IDEAS AND DEVELOPMENT IN THAT AREA, ENCOURAGE EXCHANGE OF INFORMATION IN SUPPORT OF DIGITAL TECHNOLOGY AND MAINTAIN A FAIR AND BALANCED ATTITUDE TOWARDS ALL ASPECTS OF AMATEUR RADIO.

LETS WISH BOTH ORGANISATIONS WELL IN THE FUTURE, AND HOPE THEY REMAIN ASSOCIATES IN REPRESENTING ALL THE DIGITAL MODES NOW IN EXISTENCE AND YET TO COME.

DONT FORGET TO SEND IN YOUR LOGS FOR THE ANARTS CONTEST. THEY MUST BE RECEIVED BY THE 1ST OF SEPTEMBER.

IF YOU HAVE ANY PROBLEMS WORKING OUT THE POINTS, SEND YOUR LOG WITH A NOTE TO OUR FRIENDLY CONTEST MANAGER, JIM VK2BQS, AND HE WILL WORK IT OUT FOR YOU.

HAPPY CONTESTING

NASA NAMES FIRST ROVER TO EXPLORE THE SURFACE OF MARS

On the 30th anniversary of robotic exploration of Mars, NASA has selected the name "Sojourner" for the first rover slated to explore the Red Planet. The 25-pound, six-wheeled robotic explorer is now being readied for launch, and will be deployed to roam across an ancient Martian flood plain after the Mars Pathfinder lander touches down on the planet's surface on July 4, 1997.

The U.S. spacecraft Mariner 4 initiated humanity's study of the Red Planet 30 years ago today when it flew by Mars at a distance of about 6,000 miles on July 14, 1965, taking the first close-up images of another planet.

The name Sojourner was chosen for the Mars Pathfinder rover after a year-long, worldwide competition in which students up to 18 years old were invited to select a heroine and submit an essay about her historical accomplishments. The students were asked to address in their essays how a planetary rover named for their heroine would translate these accomplishments to the Martian environment.

Valerie Ambroise, 12, of Bridgeport, CT, submitted the winning essay about Sojourner Truth, an African-American reformist who lived during the Civil War era. The name Sojourner was selected because it means "traveler."

ANARTS MEETING

THE NEXT MEETING OF THE SOCIETY WILL BE HELD AT THE USUAL VENUE ON FRIDAY 4TH AUGUST. FOR FURTHER INFORMATION CONTACT COL VK2CTD (PRESIDENT) OR PAT VK2JPA (SECRETARY).

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(14 JUly - 20 JULY)

ISSUED ON 21 JULY 1995

SUMMARY
Date 14 15 16 17 18 19 20
10cm 74 74 73 72 72 71 70
A 6 6 28 24 10 9 (10 ESTIMATED)
T 22 30 24 42 24 17 8

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET ON 14TH AND 15TH JULY, INCREASING TO QUIET TO UNSETTLED WITH MINOR STORM LEVELS 12-15 UT AND ACTIVE LEVELS 15-21 UT. THE FIELD REMAINED UNSETTLED ON 17TH WITH ACTIVE CONDITIONS 09-12 UT AND 15-18 UT, AND MINOR STORM LEVELS 12-15 UT. THE FIELD WAS QUIET TO UNSETTLED WITH ACTIVE CONDITIONS 12-15 UT ON 18TH, AND REMAINED QUIET TO UNSETTLED ON 19TH AND 20TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES DURING THE PERIOD WERE MOSTLY NEAR PREDICTED MONTHLY VALUES. THERE WERE PERIODS OF ENHANCEMENT 0F 20 TO 50 PER CENT DURING LOCAL NIGHT ON 15TH, 17TH, 18TH AND 19TH. SOME SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 17TH, 18TH AND 20TH JULY.

FORECAST (21 JULY - 27 JULY)

SOLAR: VERY LOW
GEOMAGNETIC: UNSETTLED TO ACTIVE ON THE 23 AND 27, OTHERWISE QUIET TO UNSETTLED.
IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES, DEGRADED CONDITIONS DURING LOCAL NIGHT HOURS.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z JULY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 25 JULY AND FORECAST FOR 26 JULY - 28 JULY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 24 Jul
Daily Proton Fluence >1 MeV: 3.1E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.3E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 Jul 27 Jul 28 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 26 Jul: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 24 Jul
Learmonth 5 3222 1101
Fredericksburg 10 29
Planetary 10 28

Observed Kp for 24 Jul: 3364 3244
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
26 Jul 10 Quiet to unsettled
27 Jul 14 Unsettled to active
28 Jul 12 Quiet to unsettled
COMMENT: Recurrence suggests unsettled to active periods on 27 July.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

25 Jul normal fair poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Jul normal normal fair
27 Jul normal normal fair
28 Jul normal normal fair
COMMENT: Degarded HF comms conditions are expected at high lats
on 27 July.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
25 Jul 4 depressed 15% 00-05UT then near predicted monthly
values.

Predicted Monthly T index for July: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
26 Jul 15 Near predicted monthly values
27 Jul 15 Near predicted monthly values
28 Jul 5 About 10% below predicted monthly values
COMMENT: Darwin MUFs: near predicted monthly values during local day,
20% depressedlocal night hours.
Townsville MUFs: depressed 10-15% 00-06UT, near predicted values at
other times.
Hobart MUFs: depressed 30% 00-06UT. Very strong blanketing sporadic E
observed throughtout local night hours.
Degraded HF coms conditions may have been experienced during the
first five hours of the UT day for southern region Australia.

Have you tried "Alumtap" made by Winfield Brooks Co. Inc? I don't know if it will work but it shouldn't hurt to try...

Well some hams just call up, they give them the price, they order. Not
much of anything bad can happen from this type of situation. Some hams
do business this way only and that is why organizations like AES can

stay in business.

I don't know how many of you remember, buyt 4 or 5 years ago AES announced that they were going to open up bunches of stores across the country. I remember this so well because they were going to put one in Dayton. To make it short they never did open those stores. Could it be that they recognized that they really only do well with the phone ordering business? That when they try do deal at a personal level they fail?

Look at their Dayton presence. It is non-existant except to hand out their outrageous interest rate credit card applications. AES does not want to deal with you ham to ham. They just want to push as many goods as possible out the door. If it works for them fine. But it is not the way I want to do business so I do all my business elsewhere. I would suggest that hams that want friendly service and help with your purchases (and maybe even a better price) to shop at places other than AES.

This year I already spent $4,000 on new ham equipment, it all went to places other than AES.

Regards,

Duffy - WB8NUT

GEZZZZ, I just hate it when someone takes something out of context and
reposts it.

What Jerry, mostlikely, meant to say was - Nice went "out the door" when
the {fictiously humorous} ham reached over the counter at a store and hung
up the phone while the sales clerk was engaged in conversation. Also, the
part about the customer, that disconnected the telephone (Mr. Nice?), being
asked to leave the store, in this example, and not doing so - is missing.

>other shifts such as 425Hz (total 850Hz).

There isn't a "center" frequency, other than transiently. The carrier
idles at the mark frequency, and shifts to the space frequency as
required by the Baudot character being sent. It never rests in the
"center". That's more a mathematical fiction we might use to center
a filter on the signal. The shift really is 170 Hz, though some
amateurs and some commercial users may use other shifts, up to
1,000 Hz on HF, more on VHF+. The modulation encoding is binary,
not trinary.

>
>Dave

If you're talking about a subtone encoder, and you need only a single tone,
the radio has an encoder built in. The problem is that you have to
turn a trimpot to adjust the frequency of the tone!

Otherwise, the rear panel DIN plug has everything you need for packet--
that's what my '2016A is being used for. If I remember, I'll dig the
schematic out of my files. You have ground, power, transmit audio,
receive audio, and PTT on that plug.

Which means that if you're looking to install a tone board, that back plug
would also be a good place to add transmit audio.

|>
|> --
|>

My sole experience with HRO (Virginia) was quite unpleasant. I mail-ordered
a Kenwood TR-751A 2-meter multimode and had it shipped to where I worked
at the time (ARRL HQ). When the unit arrived, it was obviously a used
(and abused) unit. Nothing was sealed, several parts were missing, there
were scratches on the case, and one of the case screws had a stripped head.
When I called HRO to report this, they repeatedly insisted that it was
a new unit. After much wrangling with no resolution or apology, I told them
I was sending it back and expected a new unit immediately or a credit
to my MC. I finally did receive a new unit after another week and a half,
but they still insisted the first unit had been new and offered no
apology.

I will certainly never deal with HRO again. I do most of my buying from Austin Amateur Radio Supply. It's relativly close to home (about 25 miles), the salespeople are friendly and competent, and they don't mind if I just come in to browse, which I frequently do. I have never dealt with them over the phone, but I am %100 pleased with their in-store service and attitude.

>this mode frequently, because others fail.

What I was addressing was your comment that CW gets through when
all other methods fail. That isn't true. However, I have no quarrel
with the idea that CW is more suited to DX gaming as it is currently
played. Like any sport, it's played in ways to limit the choice
of tools you can use. For example, football would be a different
game if the ball carrier could use an Abrams M1A tank to get the
ball across the goal line. I don't think that there's much room
for argument that that would be more effective than hand carrying
the ball. To some, it might even be more fun, but it wouldn't be
football as we know it. Same with DXing, if done digitally, the
machines would sequence the contacts and let you know how you
did. They could work weaker signals, and work systematically
through all available DX countries accessable on any given set
of channels, but it would be so easy that many operators wouldn't
consider it much of a challenge. (The protocol coders and modem
builders would consider it a challenge, but of a different order
than those who just operate the equipment.)

Special Bulletin 33 ARLX033
From ARRL Headquarters
Newington CT July 25, 1995
To all radio amateurs

SB SPCL ARL ARLX033
ARLX033 Scholarship winners named

The top Foundation for Amateur Radio (FAR) 1995 scholarship winner is David A. Arthur, N2ISB, of Charlton, New York, recipient of the Rose Ellen Bills Memorial Scholarship of 2000 dollars. Craig A. Gullickson, KC6CEX, of Fresno, California, receives the John W. Gore Memorial Scholarship, and Thomas G. Schmidt, KD4WNP, of Chapel Hill, North Carolina, has been awarded the Edwin S. Van Deusen Memorial Scholarship (both 1250 dollars).

For 1995, 55 scholarships ranging from 500 to 2000 dollars were awarded. These annual scholarships are open to all licensed radio amateurs meeting the qualifications and residence requirements of the various sponsors. The foundation is a nonprofit organization incorporated in the District of Columbia, and represents more than 75 clubs in Maryland, the District of Columbia, and Northern Virginia.

FAR is devoted exclusively to the scientific, literary and educational pursuits that advance the purposes of the Amateur Radio Service. The complete list of 1995 FAR awards will appear in an upcoming issue of QST, along with information on applying for 1996 scholarships.

The ramifications of this just struck me. How do you *find* them if you can't hear them? Just tune up and down the band while the screen flashes SIGNAL or NO SIGNAL? Or better yet, let the PC do the scanning, while displaying the license info on any signal it detects? (No sarcasm here, I'm sure it will come to pass) Or, will we all be reduced to skeds?

I have had 100 precent pactor links with 1 minute total fade outs. This
could be done by two very experianced ops. I was using a KAM with a very
simple front end. A good DSP front will do a great deal better.

In defense of cw I think the cost to benifit ratio will be very difficult
to beat in the near future. The fact that it is decypherable by ear makes
signal aqusition very much quicker than other modes. The recivers are
simpler the transmiters are about the same a variactor diode, a variable
resistor and a 5 volt logic signal make a great FSK xmiter.

> with either phone or CW.

Nope. The good ops will do about 1.5 to 2 times the QSO rate on on SSB.
300+ hours are fairly common on SSB from DX locations during DX contests.
200 per hour is really pushing it on CW.

> But back to the original question. I think the disparity in numbers
> of phone vs CW DXCC awards can be explained by looking at the ARRL's
> mode survey. They found that 78% of all amateurs used phone while only
> 38% said they *ever* used CW.

Yes, back to the original question. I agree there are many more ops on
SSB. Pull out a copy of the ARRL Sweepstakes contest results and see
how many more contacts the SSB top 10 ops have and compare that to CW.
There are simply more people on SSB.

In Arizona our dirt is kinda hard so this is how I install
ground rods. Attach a fitting converting from 1/2 pipe
to water hose to a 8 foot piece of steel water pipe. Attach hose
and fasten other end to an outside spigot. Literally drive
the pipe into the ground using water. Lifting and dropping it
til you have gotten it down as far as you want. Lift pipe
out before turning off the water. Drop ground rod in. Job goes
pretty fast, if you don't run into a big rock. Let dry, at least
10minutes . We need rain desperately, so 10 minutes is plenty.

Hi y'all
I am attempting to make a nostalgia station. I have a Drake 2-NT
for the tx and am looking for a 2B or 2C rx. My question is: Did Drake
make a companion VFO for the 2-NT?

Maybe this isn't the group to direct this question to, but can someone advise me on where locate the correct IOTA number for a given island. In this case, it's Presque Isle, Maine. Maybe if I'm lucky, someone will know that NA-number for this one. Many thanks.

>

>Hi,
> What you are missing is "Gentleman's Agreements." For example,
>the FCC permits CW in the entire 20 meter band. The phone band starts at
>14150 kHz. But you won't usually hear any CW above 14060 ...

And these are the same agreements that have made the vast repeater system possible across the country. The FCC rules only specify band edges, and a little vague reference to interference. But repeaters really run because the overwhelming majority of hams respect their value and the voluntary band plans that make them work.

There's a lot of confustion between FCC rules (the fewer the better) and agreements among amateurs that help make things work for everyone. I hope you'll recognize the value and become one of the hams who support band planning.

: it can cause the batteries to be overcharged and reduce their lifespan.
: It's not the overcharging itself that causes the problem but the heat that
: results from it.

: Storing them on the charger is not what the vendors are usually trying to
: imply. It just an easy way to show the product. Any documentation that
: comes with a radio (if you are going to get any docs at a swap meet) should
: give some battery care instructions. Those instructions typically tell you
: not to store the radios on the chargers and normally not to leave batteries
: on charge for more than about 24 hours.

Thanks, Curtis and Gary, for the clarification. There are indeed battery
care instructions with my HTs.

Unfortunately, a lot of people just do not read instructions, so the example
of storing the unit on the charger is a bad one, unless the vendor is trying
to sell more replacement batteries. Also, it just looks like something that
common sense would dictate, to keep the unit at a full charge.

>consider it much of a challenge. (The protocol coders and modem
>builders would consider it a challenge, but of a different order
>than those who just operate the equipment.)

I think that there is more to suitability of CW for DXing than merely
copying weak signals. You have to at least consider two other factors:

Scarcity and the power of the human brain. I think that the above discussion
fails to take into account the scarcity of the country of the DX station.
After a hiatus of many years a station from Libya, 5A1A, has
been on the air recently. The station has been called incessantly by
stations world wide and yet the operator succeeds in making
about 100 qsos an hour or more on a regular basis. I think
that it is the intelligent processing by the brain that makes this possible.
I fear that under adverse conditions such as the ones under which
Toly, the operator at 5A1A works, it would be well nigh impossible for
a machine.

So here is a syllogism:
(1) the brain is better than most other systems in using context
and other message characteristics to better decode the message.
The exceptions today would be the system used by JPL to decode
voyager messages and the system used by a ham to decode faint satellite
messages as reported in the QEX. However these were NOT real time.
(2) CW gets the human brain invoved in decoding at a fairly elemental
level (unless you try decoding RTTY by sound - not hard but
hardly worth the effort)

If you agree with (1) and (2) then the superiority of CW for dxing should
be obvious. Add to this the easy availability of equipment to get

the brain involved and the conclusion that CW is better seem to be a no-brainer. (sorry, could not resist.)

There is some experimental evidence to this regard. Every year, the Kansas City contest club runs a contest at Dayton where they play a tape with lots of stations calling in CW simultaneously. The highest number of call recoginized by the top human operator (G3SXW?) in real time far exceeded the number copied by using advanced DSP techniques done later and not in real time.

From ARRL Headquarters
Newington CT July 25, 1995
To all radio amateurs

SB QST ARL ARLB073
ARLB073 New RFI book from the FCC

The Federal Communications Commission has released a new Interference Handbook for consumers. The 24-page, full color book will be stocked by FCC field offices around the country to provide people experiencing interference to home electronic equipment with information and solutions to interference problems.

The book deals not only with interference to televisions from radio transmitters, but also illustrates and describes interference caused by poor antennas (weak signals, ghosting); electrical interference from home devices such as hair dryers; electrical interference from power lines; and interference from home computers and low power radio devices such as garage door openers.

In addition to interference to televisions, the handbook describes solutions to interference to hi-fi systems, telephones, and video cassette recorders. Techniques for solving problems include the use of ferrite cores, improving receiving antenna systems, checking cabling, and isolating interconnected units to find the one that is at fault.

The book lists addresses and phone numbers for sources of high pass filters, common mode filters, band reject filters, ferrites and beads, ac line filters, telephone filters, and interference resistant telephones, as well as an extensive list of manufacturers of home electronic equipment.

Page one of the new FCC Interference Handbook says ''Many interference problems are the direct result of poor equipment installation. Cost-cutting manufacturing techniques, such as insufficient shielding or inadequate filtering, may also cause your equipment to react to a nearby radio transmitter. This is not the fault of the transmitter and little can be done to the transmitter

to correct the problem. If a correction cannot be made at the transmitter, actions must be taken to stop your equipment from reacting to the transmitter.''

ARRL Laboratory Supervisor Ed Hare, KA1CV, says, ''This is the statement from the FCC that hams have been waiting for. The book takes a fair and honest approach to explaining responsibilities and cures for interference problems. The FCC team that put this together has done a fine job with a complex technical and emotional subject.''

From ARRL Headquarters
Newington CT July 25, 1995
To all radio amateurs

SB QST ARL ARLB074
ARLB074 Form 610 copies okayed

The Federal Communications Commission now accepts Form 610 amateur applications on white paper, two-sided copies of the form.

This is a result of the FCC adding the Form 610 to its ''fax-on-demand'' service, at 202-418-0177.

Since official FCC forms are color coded, submitting applications on official, buff colored Forms 610 may result in more expeditious service.

The ARRL/VEC will continue to use buff colored ''official'' Forms 610 for its exam activities.

Well, as a local government employee, and the Asst Radio Officer of Yolo County ACS (RACES), I've taken the oath several times. I rather enjoy it, actually, especially the part about "...all enemies, foreign _AND DOMESTIC_." Sort of nice to know I'm swearing an oath to my employer that I will overthrow them if they attempt to destroy the constitution... :-) :-) :-) :-)

More seriously, there used to be another part to the oath about having not belonged to any organization advocating the overthrow of the government, and other such stuff. That all was tossed by the courts LONG ago. If you are truely interested in more info about the CA state oath, head to http://www.ca.gov, and find the state codes. You want the Government Code, sections 3100 et seq., and the CA state constitution, section XX (or XXII, I forget now). The Govt Code sections talk about who has to take the oath, and the constitution section gives the text of the oath.

>prevents theft more than a 1/2 opening at the top of the window might.
>Given a modern car with non-coathangerable (?!) lock buttons, what
>additional difficulty or deterrance does the closed window offer?

Well according to my professional car thief acquaintance (repo man),
there are easy ways to get into a car that has the window down a
bit. For example, those like the Chevy Blazer which use a sliding latch
to lock and unlock the door. While that's immune to attack via a
coathanger, it's simplicity itself if you use a stiffer metal rod
with a short 'L' leg in it.

For those with lock buttons that are lipless, thus giving a coathanger
no purchase, the slightly opened window allows a "grabber" to be inserted
which can still work the button. (A grabber can be mechanical, or just a
rod with a piece of rubber tubing of the right diameter on its end.)

A Chevy Vega has a lipped button, but it's tucked horizontally into
the front of the armrest. You can't get it with a coathanger, but if
you take a 1/2 inch by 1/8th inch piece of flat stock about 2 feet
long, cut a Vee notch in the end, and bend that at 90 degrees to the
rest of the bar, and with a quarter twist, it'll slip in and pop that
button slick as grits. (Of course why anyone would bother breaking into
a Vega is beyond me, unless they locked their only set of keys inside
like I did.)

Many newer cars can't be opened with a "slim jim", so a tightly rolled
up window forces the thief to break the glass to get in, but if the owner
has left an opening, there are a number of simple tools that will open
the door very quickly, and quietly. Thieves know most of them. There
are still some ways to get into some modern cars without breaking the
glass even if the windows are rolled up tightly, but they're a lot harder
than if the owner was nice enough to leave the window down a bit. (For
example, I can get into a late model Blazer in under 10 seconds without
breaking the window if I have the two rather special tools needed, but
I won't describe them here, no use educating any potential car thieves,
especially since I currently have a Blazer.)

All phone patches are already third party traffic. This would be
fourth party traffic, but the FCC can't count past three. :-)

>Would I say something like "Ke6uux with third party traffic" before I make
>the autopatch call?

Not unless you wanted to. Just say "ke6uux for the patch" just like
you normally would. When the called party comes on line, just hand
the mike to the person at your end who you want to speak. As long
as you maintain "control" of your radio, it's no different than any
other patch.

1579. ? on Motorola Mute Monitor to Centracom

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-25 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ccnet.com>
Message-ID: <3v31el$ie3@gaudi.lahabra.chevron.com>
Source record: 241774
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I was trying to find another, more appropriate group for this but I don't seem to see one. This is directed to those of you that work with commercial equipment - namely Motorola base stations and related.

In order to use Stat-Alert signalling we recently made some changes to a radio system...

-- Changed a MSF5000 from DC to tone control (it's an older analog only unit) and added a wildcard.

-- Installed a Mute Monitor (MM-II).

-- Upgraded our Centracom II to a II Plus and added a Display Channel Control Module (DCCM) for the radio that will use Stat-Alert.

All of the new equipment seems to be working fine but something wierd is happening and the users have asked what it is, and why it's there. Here is what's happening... About every three to four minutes the "channel free tone" drops and and a lower frequecny tone (I haven't tried to measure it) appears on the wireline for about a half second.

This short tone ends up coming out of the operator console speaker. It seems to be coming out of the MM-II. Since the channel free tone goes away when it happens, the Centracom send it to the speaker. Like I said, it's very brief.

Is there anybody out who works with this type of equipment and knows what this might be? Are there any non-amateur, radio newsgroups that I might send this question to? There used to be a wireless group under comp."something" but I can't find it now. BTW the project coordinator has asked Motorola about this but hasn't got a definitive answer - just in case someone is considering the obvious, "Why don't you call Motorola" response to this.

Please post or mailto:cgwh@chevron.com or mailto:cwheeler@ccnet.com

Thanks

Haven't had any experience hiking there, but my understanding is that there is a Yosemite Valley repeater, W6BXN, 147.000 minus split, that links out to the 147.030 minus CTCSS 107.3 repeater near Turlock. Hope this helps.

>AES in Mil. without a problem.

If it was the older guy, it doesn't surprise me. I had the opportunity to
purchase a hard-copy of the elements 2 and 3A which W5YI puts out, and he
told me _ad nauseum_ how I would never pass the exams by buying this, &c &c
&c.

There is a woman there, however, who was nice and showed me quite a few
pieces of equipment, gave her input, and so on. When I asked her why I
should pay the $100 premium (not including 8.25% sales tax in NY) over HRO
or AES, she told me "We do service here, blah blah blah, and if you want
we'll meet their price".

So like everything else it depends on who you get on the other side of the
counter or phone, I suppose.

Barry's (within the last year) has moved from their long-time
hole-in-the-wall to a new and cleaner and smaller hole-in-the-wall up the
street.

I went on a Saturday or Sunday which must have been a slow day as there were only 2 people (both I think were salesman). There weren't too many customers in the store either.

>If it was the older guy, it doesn't surprise me. I had the opportunity to
>purchase a hard-copy of the elements 2 and 3A which W5YI puts out, and he

I don't remember exactly which guy it was, but I had a similar experience. After I passed my Novice I was in the market for a Tech study guide. I was looking at some study guides when I heard the remark about being a "problem". I was going to buy the study guide, but decided to order the guide direct from ARRL. I know I wasn't going to be buying the $300 HT, but calling me a problem because I was asking them some questions was going overboard.

>There is a woman there, however, who was nice and showed me quite a few

"If you want we'll meet their price", they should want to do it. The sales is crazy, and if I did buy any expensive goods I would have shipped it to NJ (before the stupid sales tax agreement went into effect).

>Barry's (within the last year) has moved from their long-time

The old store wasn't that big, business must not be to good if they moved to a smaller store.

Yes, it is third party traffic, but you don't need to announce
the "third party traffic" bit (unless the repeater trustee has
asked that you do).

As in any "third party" situation, you must remain in control of the
transmitter at your end.

I recently bought a used IC255A 2m mobile. It seems to power up fine,
and the display says "6.010" as it should. At this point, however, I
can't change the frequency no matter what I do. The manual keeps telling
me to turn the frequency knob, but this doesn't help. Before you ask, the
knob IS connected securely to the control. Anyone ever seen a problem
like this or have any bright ideas?
Thanks - Bruce N0NUN

You'll almost certainly keep your current call. I'd bet your
correction was being processed by paper, since you already have a
callsign. This means 2 weeks is not a long time to wait. You'll get
it straightened out, one way or another. Eventually. (Couldn't you
just submit a 610 yourself?)

In any event, congratualations! And relax. You're legal. Enjoy the
hobby.

(Forget code v. no-code, it's ELECTRONIC FILING that's spoiling the
newcomers and ruining ham radio! :-)

NO!!! "Everyone" is wasting their time!
I have emailed Fred and got a reply so he knows full well that amateurs in many countries including Australia get their filled-in form bounced off the server because it does NOT cover their country.

Fred complains that the information re VK callsigns is not available but it is if he is prepared to pay the Spectrum Management Agency in Canberra for the information. This is not unreasonable as he is using the information in a money-making activity.

In the meantime P L E A S E Fred, don't keep re-posting this without stating that your server is only to be used by amateurs in the US and whatever few other countries are included. It is otherwise misleading information.

Warren-

I'm not a grounding expert, but have picked up a few pointers over the years.

One point, is that lightning protection needs very heavy conductors, not just a whimpy number 8 AWG wire! Conductors with any significant resistance, may melt or explode if lightning strikes. Suppose a conductor having 0.1 ohms resistance, conducts a 10,000 Ampere lightning pulse that lasts 0.01 seconds. If there were no inductance in the wire, peak voltage would be 1,000 volts from end-to-end. Energy dissipated would be 10,000 times 10,000 times 0.1 times 0.01, which is 100,000 Joules. Taking inductance into account, induced voltage could be significantly higher, but energy dissipated would still be current-squared times resistance times time. I made up these numbers, but believe them to be in the right order-of-magnitude.

A good low-resistance method of joining heavy conductors (including the one to the ground rod), is supposed to be "exothermic welding". However, this is a hazardous process. It may be best to hire an electrician who knows what he is doing, to make the connections you need, using this method.

As far as "spade" lugs are concerned, I would argue that a "ring" lug may be a better choice. Regardless, a lug for heavy cable would be crimped using a hydraulic crimping tool. As you suggested, soldering would be of little value.

What about your ground rod? A local hardware store stocks an eight-foot rod, which many consider to be OK. However, some experts in the field of lightning protection, recommend a set of three, twenty-foot rods!

I used the plain old pounding methed, and only had to move it once
because of rocks. One of my friends told me to put the clamp on
before pounding because the top will mushroom. Turned out to be
good advice.

But I have another related question regarding grounding. I have a
Rohn HDBX-48 48-ft tower with flat legs. Each section bolts to the
next with 3 bolts on each leg (for the bottom couple of sections,
then 2 bolts). Anyway, I got about 10 feet of number 8 (?) wire,
which had about 19 strands of stiff conductor. I loosened one bolt on
one tower leg close to the ground, spread the conductors out in a "V",
with half the conductors going around each side of the bolt, then clamped
it down tight. All of the conductors spread out so they were not under
the head of the bolt, except for one on each side of the bolt. Hmmm...

I heard one of the local gurus say one should use a spade lug. This
cable must be 3/8 inches in diameter. I probably could find a spade
lug at an electrical supply store, but it would take a blow torch
to melt the solder to attach it. I heard another guru say solder
will vaporize during a lightning strike. What should I do?
Do they make spade lugs that clamp onto the end of the wire?

Gachon-

When I tried it using Telnet rather than ftp, I was taken directly to the prompt. I typed in a call, and it responded with data. No login or password was required. If you/he was also using Telnet, then perhaps the port number 2000 was not entered correctly.

I was impressed that they are using up-to-the minute FCC data!

>>confirm the frequencies - they seem *awfully* low. Jeff NH6IL

>That's why they call it ELF (Extremely Low Frequency).

Well then, the frequencies *are* incorrect, for we have the following
table:

HF = 3 - 30 MHz (100 - 10 meters)
MF = 300 - 3000 kHz (1000 - 100 m)
LF = 30 - 300 kHz (10 - 1 km)
VLF = 3 - 30 kHz (100 - 10 km)
ELF = 300 - 3000 Hz (1000 - 100 km)
SLH = 30 - 300 Hz (10,000 - 1000 km)

80 Hz does not lie in the ELF region.

ATTENTION ATTENTION ATTENTION ATTENTION

CableVision Of Hauppauge Subscribers

On Sept 1,1995 Cablevision will DROP Broadcasting the NASA SELECT TV Service
that is on channel 1/52 from 10am-4pm 12am-6am.....

I think the only way to save NASA SELECT is by calling Cablevision
and telling them to keep NASA SELECT.. Even if you don't have
CABLE TV or CableVision of Hauppauge you should call. I heard
that they are dropping NASA SELECT because they never get calls
praising there REBroadcasting of NASA SELECT..

So come on and give them a call, or if you want to watch NASA SELECT
you'll have to get a Satellite TVRO 10ft Dish...

*** The 18" DSS (DBS) System does NOT have NASA SELECT ***

CableVision can be reached at (516) 348 - 6800 Main Switchboard
348 - 6700 Sales
582 - 8324 Marketing
348 - 6872 FAX

CALL NOW .... We can't lose NASA SELECT

Thanks for the HELP,

Keith

Me (cfrancis@infinet.com) wrote:
: scrach. What I need to know is the charging current I need to
: supply to the battery. Is there a formula or something?

: Also.....
: I know I can limit current with a resistor. Question is, lets say I need
: 65 mA into my battery to charge. Do I calculate the resistance into
: a dead short (no battery, just a short where the batt would be)
: so that current would never go beond that limit or can I use some sort
: or regulator that always puts 65 mA into the load (battery) no matter
: what the state it is in.

Limiting the current with a resistor is not the way to go. The
battery changes as it charges, and the current will also. You will need
a constant current regulator. This can be as simple as a LM315/338/350 with
a resistor between the out and adjust. If you like discrete, look at a
current mirror.

: BTW, the batterys I have now are 7.2 V @ 600 mAh. The reason
: I want to build my own charger is that I want to be able to charge
: several diffrent size batterys from 1 charger. (and it is cheaper to
: build than to buy a charger for every diffrent type of battery I have)

If your using a constant current regulator, just change the resistance
for different currents with a rotary switch. You may also want to look
at fast chargers like the Maxim 712/713 which charges multiple cells.

Source record: 241603
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

The seemingly poor customer service delivered by AES and others
was done for a purpose. They are not trying to be rude, and
they realize that they serve a vital purpose as lid filters. Can
you imagine the chaos on the bands if everyone in the store was
treated with respect? You would have every CBer and (gawd)
no-code tech in there looking at equipment. These salespeople work
on commission and realize that only people who are willing to jump
through useless hoops are real hams. Only real hams are willing
to spend kilobucks on cheesy far-eastern radios employing 40 year
old technology.

The next time that the salespeople ignore you, simply pull out
your code oscillator (homebrew - no appliances allowed) and beep
your order. They will pay attention - CW gets through where
nothing else will.

73,
John AA2OZ

Disclaimers:
I have had no dealings - good or bad - with AES.
I like CW, I like no code techs, I even like a few CBers.
Most of my radios are Japanese appliances.
I don't carry my code oscillator to stores.
My employer is not worthy of views this profound.

>>The Navy's Project ELF transmitters in Northern Wisconsin and the
>>Upper Peninsula of Michigan broadcasts on 76 Hertz. That's ELF. The
>>signal is frequency shift keyed between 72 and 80 Hertz.

The information that Terry provided is correct, and the story about this transmitting site was documented in a story in Popular Science a few years ago (Sorry I don't have the exact date). If you wish to verify this with more contemporary writing, try the LF Engineering Co.'s Cataloge of low frequency equipment (its free, 17 Jeffry Rd. East Haven, CT 06513). On page 10 they have a very good overview of natural radio (as well as human made ELF) and mentions the 70hz sub communications. LF Eng sells a radio that receives down to 300hz (yes thats Hertz not killo Hertz) for picking up natural radio phenomina such as Whistlers (lightning EMF travelling along the earths magnetic field that make this type of sound in the ELF frequencies). If you go into the Web and search on VLF you will find a number of interesting scientific groups at work in this area. There is a VLF observatory that has built two huge loop antennas (one facing east/west and another facing north/south) made out of coax. They are formed into a box of 10 turns, with each side of the box being 30 meters long ! Frankly, I'd love to have seen some of the old VLF antenna systems that worked in the 10khz region. Imagine an antenna over one mile in lenght hangin between four to six 600 foot towers. There were three of them near New York city in the 1950's. Another which was nearly 2 kilometers long was strung between the lip of a cone of an extinct volcano in Hawaii during WWII which served the US navy.

Anyone who has info on this type of material I would appreciate hearing from.

1610. Re: CW an advantage for D

: : can't quote the statement exactly, but the reviewer stated that the board
: : was copying Baudot signals that he could not even hear! So much for CW
: : being in the forefront....

: : As the old adage goes - you can't work them if you can't hear them...

: How about another adage: "You can't work them if they don't operate
: your mode". In this regard, Morse beats the daylights out of those
: modes. Technical superiority? Nah. Current communications
: superiority? Yup.

: Greg
: WB0RTK

Not that I have ever heard of that adage...

I would recommend to all that they obtain the article and read the
author's review. I am sure you will agree that the author was categorical
that the board was able to copy signals that he could not hear with his
ear. In other words, the corollary to the author's review was that Baudot
signals were decoded that with other modes, such as Morse code would have
been impossible because to the human ear, they were not even there to be
decoded.

Therefore, those claiming that CW is technically superior to digital
communications are petulant, if not ignorant.

73 and live better digitally

Rajiv Dewan (rdewan@uhura.cc.rochester.edu) wrote:
: In <1995Jul25.140607.16175@ke4zv.atl.ga.us> gary@ke4zv.atl.ga.us (Gary Coffman) writes:

: So here is a syllogism:
: (1) the brain is better than most other systems in using context
: and other message characteristics to better decode the message.
: The exceptions today would be the system used by JPL to decode
: voyager messages and the system used by a ham to decode faint satellite
: messages as reported in the QEX. However these were NOT real time.

The brain is using the error correction of english, in that many more
symbols are used then are needed to convey the needed information. There
are people using AI techniques to accomplish this in machines, but the
human mind is better at it.
Of course if the mode is digital, then we can plunk down a good ECC
(Error Correcting Code) and the machine should have no problem with single
bit errors. If we extend the coding waste and speed to that of CW English,
we should be able recover from multi bit errors, and have time diversity
were whole packets can be missed. This isn't exotic, I taught it in a
junior level digital design class, the first night.
As for machine decode of CW, it can do as good as a human for
individual characters. The machine can integrate over multiple wavelengths,
build adaptive filtering to remove a lot of noise, and then set optimal
thresholds for detection. This isn't exotic either, but it is damn close
to the maximum that theory states. Humans fall under the same laws governing
detection, and can only approach the same maximum.

: (2) CW gets the human brain invoved in decoding at a fairly elemental
: level (unless you try decoding RTTY by sound - not hard but
: hardly worth the effort)

What does this mean? Elemental level? Are the proponents of CW
now going to say that their only exist five elements, wind, fire, water,
earth and CW?

: If you agree with (1) and (2) then the superiority of CW for dxing should
: be obvious. Add to this the easy availability of equipment to get
: the brain involved and the conclusion that CW is better seem to be a
: no-brainer. (sorry, could not resist.)

: There is some experimental evidence to this regard. Every year, the
: Kansas City contest club runs a contest at Dayton where they play
: a tape with lots of stations calling in CW simultaneously. The highest
: number of call recoginized by the top human operator (G3SXW?) in real
: time far exceeded the number copied by using advanced DSP techniques done
: later and not in real time.

Just because someone says they are using "advanced DSP" doesn't
mean that's the best available. The decoder would have to be programmed
with the context of a QSO, like some call formats don't make sense, this
is the order that transactions/signalling occurs. A much more fair
experiment would be to use random letters and numbers in a stream. Either
way, what processing was done, and why can't it be done in real time? I
run lots controls and DSP algorithms in real-time on the same computer(68332
running at 16 MHz) and still have time to do diagnotstics. There are a
number of DSP chips that are dirt cheap (~$10) that can do it even faster.

73,
Shawn

I had a bad day at the testing session when I found out that the code on the test went faster than the code in SuperMorse that I had practiced with. When I got home, I looked through the manual, and found SuperMorse has to be calibrated. Went back next month and whipped the test.

I went from no license to extra in less than a year (I had tinkered with Morse code in grade school). It's not difficult or mysterious. You just practice 20 minutes every day, and you have to want it BAAAAAADDDDD. You'll end up upgrading about every 3 or 4 months. You can do it! Good luck.

Sure it's legal... so long as both channels in use are
licensed to the business/person in question.
Years ago when an existing customer would upgrade his
system from VHF or lowband, whatever, to UHF etc we would
occasionally wire the old base station up to the new system
so all units could talk to each other, that way all mobiles
didn't have to be purchased instantly; they could be
replaced with the UHF unit as each one was taken out of
service. Business-band dual band or crossband in the case
of a repeater system, if you will.

Boy, I think that I would have been a little upset if I had received a
used unit too! However, I must say that my experiences with HRO have
been positive. I live about 20 miles from their Portland, OR store,
and I go in about once every month or two. They seem helpful when I
go in. Also, they don't mind if you browse the store, and won't keep
bugging you if they can see that you are just looking!

Jeff Stillinger (js@ibbs.anaheim.ca.us) wrote:
: I have lived in Mission Viejo, CA, an area with really tight restrictions. I
: have also been a ham for about 10 years. I found that the restrictions on
: ham radio where not that restrictive if I was creative. I worked a ton of
: DX on a ground mounted vertical. It could not be seen from the street but
: the two story house next to me could see it from upstairs. I worked out a
: deal, and it stayed. CC&R's are enforced by your neighbors, so it is a good
: idea to get along with them. They may not try to "get" you on a antenna
: that is well hidden. They may go after more enforcable items, such as your
: grass, or color of house, or where you park your car.

: I am not really the nices guy to talk to about this issue. I am pro CC&R's
: and I feel every neighborhood should have them. I don't like the idea of my
: neighbors effecting my property value and safty of my neighborhood. Most

But this assumes that towers affect the cost of your property.

They don't.

: areas that have them are to expensive for the rif raf to move in. However
: one dose see lazy home owners, hams being the worse. Hams talk on the radio
: and forget to mow the lawn. Seen it many times.

I also want to know when you snuck into my backyard!

: The safty issue is really big with me. For example in Mission Viejo one is
: not to park cars on the street or in the driveway. Visibility is very good,
: keeping one from running over kids on a bikes. Seen that one too. Also by
: not haveing oil dripping on the street, taxes are kept down and streets are
: in good repair.

I can see the line about visibility versus kids...but oil on the
streets versus repair...that one is a stretch...do you know what
asphalt is made of? Oil. No, the streets are in good repair
cuz you live in Southern CA where they don't have bad weather,
don't salt the roads, and you don't have commercial traffic like
heavy trucks running thru the neighborhood. That is why
the streets don't require as much maintenance.

: I could type for hours on all the advantages that CC&R's have. When one has
: studied and sat on home owners boards such as myself, one can really see how
: small of a issue ham radio really is.

You haven't, but others have...Foster city being the best example. Hopefully
with you on the board you could act as buffer for any hams that might
come before you. Note: the best line of defense is being on the

city council or planning board for your area! Get politicaly active
if you want to eventually put up a tower!

: We never went after someone that took
: measures to keep antennas under control. In short the tower thing had to
: go. A well placed ground mounted vertical was not really a big deal. All I
: had to do was build and sign a paper that said I would keep my veritcal in
: good repair so that it would not blow apart in the wind and hurt someone or
: something.

: I hate to brag but the area I lived in was a perfect example of hams and
: neighbors living in a upper middle class area together. Anyone can do it,
: it all rests on ones attitude.
:
: Jeff Stillinger - KB6IBB js@ibbs.anaheim.ca.us

Jeff, the thing you don't seem tor realize is just how much you are
compromising to live where you are(from the ham point of view....)
Veritcals are all well and good...but if you hobby was contesting..or
trying to keep up above 300+ countries or some such...this wouldn't
be true. You have to remember that our hobby is VERY diverse, and
that in many ways, our towers are like our work benches. Many of
us change antennas on a weekly basis! It is all part of the
experimental nature of our hobby. One city locally requires that
you go thru a use permit EVERY TIME YOU CHANGE the antenna...
if it's over 8 feet long! (P.S. Chris Imlay suspects this won't stand
up to scrutiny when we finally wind up taking them to court....)
My point is simply that even though you've managed to find
contentment in you situations..and that is good...it isn't
necessarily (and probably won't) mean that the average amateur
could settle for what you have.

: >ball across the goal line. I don't think that there's much room
: >for argument that that would be more effective than hand carrying
: >the ball. To some, it might even be more fun, but it wouldn't be
: >football as we know it. Same with DXing, if done digitally, the
: >machines would sequence the contacts and let you know how you
: >did. They could work weaker signals, and work systematically
: >through all available DX countries accessable on any given set
: >of channels, but it would be so easy that many operators wouldn't
: >consider it much of a challenge. (The protocol coders and modem
: >builders would consider it a challenge, but of a different order
: >than those who just operate the equipment.)

: I think that there is more to suitability of CW for DXing than merely
: copying weak signals. You have to at least consider two other factors:

: Scarcity and the power of the human brain. I think that the above discussion
: fails to take into account the scarcity of the country of the DX station.
: After a hiatus of many years a station from Libya, 5A1A, has
: been on the air recently. The station has been called incessantly by
: stations world wide and yet the operator succeeds in making
: about 100 qsos an hour or more on a regular basis. I think
: that it is the intelligent processing by the brain that makes this possible.
: I fear that under adverse conditions such as the ones under which
: Toly, the operator at 5A1A works, it would be well nigh impossible for
: a machine.

The scarcity arguement is hardly credible particularly in the case of
Lybia. In fact, when it is the only mode available, due to licence
conditions by the responsible administration, it is disengenuous to argue
the CW is superior.

With respect to the QSO rate, given the same training and skill and
experience, 100 QSOs/hour in digital modes is a rather easy goal to
achieve.

: So here is a syllogism:
: (1) the brain is better than most other systems in using context

: and other message characteristics to better decode the message.
: The exceptions today would be the system used by JPL to decode
: voyager messages and the system used by a ham to decode faint satellite
: messages as reported in the QEX. However these were NOT real time.

Again, this notion that better decoding systems are available only for the space program or are beyond the financial means of most amateurs is untrue. I draw your attention to the recent review of the HAL P38 board, which contains Baudot, Amtor, Pactor and Clover capabilities. In the review, written by an ARRL staffer, claimed that the board was able to copy Baudot signals that he himself could not hear with his ear. This by the was indeed in real time. The list price was $US395 - so it also destroys the myth that amateurs cannot use advanced communications techniques.

: (2) CW gets the human brain invoved in decoding at a fairly elemental
: level (unless you try decoding RTTY by sound - not hard but
: hardly worth the effort)

Granted, CW is a simple mode whereby minimal equipment is required. But considering its ineffeciencies, this supposed factor in favour of this mode is continually diminished as technology develops.

: If you agree with (1) and (2) then the superiority of CW for dxing should
: be obvious. Add to this the easy availability of equipment to get
: the brain involved and the conclusion that CW is better seem to be a
: no-brainer. (sorry, could not resist.)

Well, since your premises were false, so goes the conclusion.

: There is some experimental evidence to this regard. Every year, the
: Kansas City contest club runs a contest at Dayton where they play
: a tape with lots of stations calling in CW simultaneously. The highest
: number of call recoginized by the top human operator (G3SXW?) in real
: time far exceeded the number copied by using advanced DSP techniques done
: later and not in real time.

Not that this really proves anything, but there are digital schemes that can do the same - and with greater reliablity.

: Regards,
: Rajiv - aa2ui

SB QST @ ARL $ARLB075
ARLB075 Hemispheric permit sought

ZCZC AG42
QST de W1AW
ARRL Bulletin 75 ARLB075
From ARRL Headquarters
Newington CT July 26, 1995
To all radio amateurs

SB QST ARL ARLB075
ARLB075 Hemispheric permit sought

The ARRL has asked the Federal Communications Commission to implement US participation in an ''International Amateur Radio Permit'' covering countries in the Western Hemisphere.

The IARP would allow, in conjunction with an amateur's home-country license, temporary operation in any other country in the Americas that has signed the agreement.

The IARP was developed through the Inter-American Telecommunication Commission (CITEL) by Region 2 of the International Amateur Radio Union, and after approval by CITEL it was presented to the General Assembly of the Organization of American States, where The Inter-American Convention on an International Amateur Radio Permit was adopted on June 8, 1995.

(The US Communications Act permits the FCC to allow foreign radio amateurs to operate in the US and its territories through both bilateral agreements--the familiar ''reciprocal operating agreements'' between two countries--and multilateral agreements, such as the IARP.)

The IARP, the League said, would eliminate paperwork for both the FCC and for US, as well as foreign, licensed amateurs. Countries signing the agreement will not be allowed to levy a fee or tax on a visiting IARP-holder. IARPs would be issued in two categories: Class 1 (in the US, Amateur Extra Class privileges), and Class 2, Technician class privileges).

Smitty,
Find a ham magazine and look up PC Electronics, sorry I don't have the number handy. They have a small ATV transmitter board kit that can be installed in RC craft. Not sure about price. To receive it, you need their downconverter - about $ 89.00. The downconverter puts the signal on channel 3 or 4, so you can use a DC powered TV. ATV is a lot of fun but I have found very few hams that participate in it.

1633. Installing a Ground Rod

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-26 00:00:00 UTC
From: Greg Taylor <gtayl00@mail.gpbx.net>
Message-ID: <3v4g58$hko@dns.cpbx.net>
Source record: 241706

Hi All,
I saw a while back someone inquiring about the best way to install a ground rod. Well, this used to be a job I hated and never looked forward to doing, even on my best days. Then I happend on a friend who just happened to work for the power company and he showed me a little trick. There is no secret to this and you don't need any special tools. Simply get a good ground rod and a pitcher of water. As you start the ground rod into the earth work it up and down as much as possible. Add a little wateer to the area around the rod and continue to work it further into the earth as you continue to add water. I have installed several ground rods this way and even to my suprise it really works. If you hit a rock or a root simply retrieve the rod and start in a new location. It sure beats hammering your brains out and maybe bend the rod or battering up the end. It is so easy it works. By the way the ground around here has about 1 - 2 ft. sub-soil and then you run into clay. So it really work well in a sandy soil. Just a little passed on to me and on to you. 73

If you have difficulty copying cw at a certain frequency you can ask
the VE to administer a test with the tone set to a frequency you
are able to hear. In fact, the VE's can design a cw test specifically
for your needs should you require special needs for medical reasons
or whatever.

If your VE's use a tape recorder with a variable pitch control, then
changing the tone shouldn't be a problem. If not, you could always
borrow/buy a tape player with that capability and ask the VE's to
use it for your test.

If they're good VE's, they'll do it.

no, Drake didn't. most people of the day seemed to find old Heathkit
VF-1's and fix 'em up to be haflway stable. now - do you have the
2-CQ q-multiplier (used with the 2C)...i don't remember if there was a
noise blanker for that one.

i have a friend at work that has a 2B but i don't think he's not using it.
i used to have a 2NT and 2C/2CQ and sold it around 1975/1976 or so.

I'm not involved in the VE program, but don't pitch controls on tape recorders change the capstan speed? If so, that wouldn't be a viable alternative - changing 800 Hz to 400 Hz would cut the WPM in half.

Perhaps a memory keyer with an adjustable sidetone, or a program like SuperMorse, would solve the problem.

i'll give 'em a break -- that is self defense to some extent. we're talking an
area with a lot of hams that could spend all day there hobknobbing.

Like i said -- they just need to set up such that there is someone covering the
counter and put the phones in the back room somewhere so it's not an issue. Or
consider not having a "storefront" and just have a walk up pickup counter instead.

If i'm over in o'do and have time to stop by, you bet i will. I've been remiss in
making sure they had some exam handouts this year as well (comes from having
an unreliable car that couldn't easily make the trip to O'do.)

It gets ridiculous here, too, in Idaho. What I do is I usually keep a hat on the radio. I've got it mounted on the side of the center console in a Ford Tempo GLX ('85) and just hang the hat on it to cover the radio. It keeps the direct sun off. No problems with the Yaesu FT2500M yet. (Also knocking on my head. :-). I keep the HT in the trunk much of the time, and it's been cooler in there than in the interior of the car, so that's an alternative: Pull over before you park on campus, xfer the radio to the trunk, then go on in to school and park. Leave, find a place to pull over, get the radio out of the trunk, and go on.

I think it works like this:
If you make 10 contacts on 10 meters who give you their 10-10 numbers,
you can apply for your number.
I do not know if QSL's are required.

I had a number back in the 70's. I have no idea what my number
was. I have held the same call since then.

Does anyone have any idea how I can find out what my
number is?

1655. re:Looking for a hamfest schedule?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-26 00:00:00 UTC
From: Michael.Black@juxta.mba.org
Message-ID: <d77_9507261330@mba.mba.org>
Source record: 241728

bnelson@desire.wright.edu (Brian Nelson) was looking for
some place on the internet where he could find a list of
upcoming hamfests.

I'm sure I saw someone posting a list, maybe just of New
England hamfests, some months ago. I saw more than one of
them, but then I haven't seen any in a while. Unfortunately,
I can't remember where I saw it. Perhaps in a fidonet echo,
or perhaps on one of these ham newsgroups..

One place that might have such a list is the ARRL mail-server.
Send a message (the subject header doesn't matter and can be
blank) to:
info@arrl.org

and put in the body "help".

You'll get a text file back that describes how to use the
server, and how to get a listing of what's available there.
Once you get the list, see if there's a list of ham fests,
and if so, email for it.

The mail server has plenty of interesting stuff, and it's
well worth checking out. It's nice that the ARRL is using
a mail server, since email is a lot esier to get and less
costly than full access to the internet.

Chris, some of the best information on this subject appears in the ARRL
publications including the Handbook as well as a recent article in QST.
If you want to cut your teeth on a pre-fab kit, I think Ramsey has
something along these lines. There are also good articles in the
other publications as well. These will include schematics, and sources
for hard to find components. Try the June or July QST.

QSL Information.

CG7D via VE1FO. X5EBL via YU1FW. BV9P via KU9C. S07URE via EA4URE.
3V8BB via JF2EZA. S01MZ via EA2JG. OX3LX via OZ1DJJ.
T20XC via JE1DXC. 9A17A via 9A1AKL. 9A17ST via 9A1CBM.

Contests.
The S.A.R.T.G. WW RTTY contest has three periods of operation
starting 0000-0800 and 1600-2400 Saturday August 19.
The final period is 0800-1600 Sunday August 20.

Bands:
3.5, 7, 14, 21, 29 MHz. The same station may be contacted once on
each band for QSO and multiplier credits.

Classes:
(A) Single Operator, all bands.
(B) Single Operator, single band.
(C) Multi-Operator, single TX, all bands.
(D) Short Wave Listener, all bands.
Note:: A single Operator, all bands may also enter one single band
of own choice.

Exchange Message:
To consist of, RST - QSO number starting 001.

QSO Points:
QSO with own country, five (5) points.
QSO with other countries in own continent ten (10) points.
QSO with other continents fifteen (15) points.
In Australia, canada, Japan and USA, each call district will be
considered a separate country.

Multipliers:
Each country per the DXCC countries list will count as one (1)
multiplier on each band, including the first contact with Australia,
Canada, Japan and USA. In addition, each call district in Australia,
Canada, japan and USA will count as one (1) multiplier on each band.

Scoring:
Sum of QSO-points times sum of multipliers = total score.

SWL's:
Use the same rules for scoring, but based on stations and messages
copied.

Awards:
To the top stations in each class, country and district mentioned
above, if the number of QSO's is reasonable.

Logs:
The logs must be received by October 10th. 1995 to qualify.

The logs must contain: band, date/Time UTC., Callsign, Message sent and received, Points and Multipliers. Use separate sheet for each band and enclose a Summary sheet showing the scoring, class, your call, name and address. For Multi-Operator stations, the calls or names of all operators involved.

Your comments will be very much appreciated.

Send your Logs to:
SARTG Contest Manager, Bo Ohlsson SM4CMG. Skulsta 1258,
S-710 41 Fellingsbro, Sweden.

Notes of Interest:

Belau. (KC6). NH6YK plans to be QRV all bands and modes from June 13 until August 25. He has requested the call KC6YK.

Tunisia. (3V). Mike, JA2PDQ was QRV until mid June as 3V8BB providing several spells of RTTY, QSX up 25K.
Osamu has now taken over the keyboard with the same QSL manager.

Mauritania. (5T). Eric 5T5JC should now be on the air with the special call 5T6E until August 25. all bands and modes.
QSL via F6HNU. (Thanks Didier TU4EX).

Svalbard. (JW). Dominik, DL5EBE, hopes to spend his free time on the air with the call JW0K, between his field work with the Norwegian Institute for Biology and Geology, from July 18 to October 8.
QSL's direct to DL5EBE or via the buro.

Western Sahara. (S0). Jose, EA7EL was QRV RTTY with the call S07URE while Mahafud used the call S01MZ.

CG7D. Is a special call to mark the G7 Economis Summit in Halifax, Novascotie. The CG7 special prefix is normally reserved for amateurs in British Columbia (VE7).

EA8AVT. is on the Canary Isl. AF-004.
X5EBL. was in Banja Luca.
OH0/DL5FF, and /DJ2PJ, were on Aland Isl. EU-002.
OZ1CQX, and OZ5MJ, are on Falster Isl. EU-029.
BV9P, ran from May 25 to June 5 from Pratas Isl. AS-110. It is hoped this DX-Pedition will secure DXCC status for the island.
5R8KH, Madagascar main Isl. AF-013.
4S7/JA4FM, Sri Lanka Isl. AS-003.
LA5SJA, Verdoe Isl. EU-141.

I am pleased to confirm that Vlad, UA0FZ, reported in bulletin 029 from Sakhalin Isl, is alive and well following the devastation of the earth quake.
He was spotted calling CQ from IOTA AS-018 in mid June.

Thanks this month to..
G3ZYP, VK3EBP and DXNS.

BARTG caters for all DATA interests with information-components-
kits-ready built units and professional software for the P.C. and
other computers covering all common data modes.
Members receive a quarterly journal devoted to data modes.
Beginners guides for most data modes are available which are
currently being updated.
The group sponsors HF RTTY - Amtor - Pactor contests, administers
its own DX and members award schemes and holds an annual rally.

Please address membership enquiries to :-

VLG> I recently checked into the Golden Corner Net from SC on 10m, and the
VLG> exchanges included a "Springbok" number, at least that's what is
VLG> sounded. OK, so I'm pretty green (just sent in for my 10-10 number).
VLG> What is this? I don't see a posting about it and would appreciate
VLG> information. 73 and watch those band edges.

A Springbok is a South African gazelle and it's also a chapter
of the 1010 organization. Their goal, as is 1010's, is to instigate
use of the 10m band. You need to make contact with an IQ (Instant
Qualifier, a person in the chapter allowed to recruit people). When
you find one of these critters (KE4CRU, Wallace, should be easy to find
on the Golden Corner net...I refer to it as the chaos net), make contact
and tell him you wanna join. They're a good group and they have great
looking awards, if you like wallpaper. As a matter of a fact, I joined up
just for their for the awards. They make the ARRL's look like cardboard,
but what don't!

I have always thought that the thing to do was to open a Coffee/Doughnut shop
next to the AES and work out a deal with then to use their antenna's on their tower. Like any normal doughnut shop must of your business will be people going to work in the A.M., that will pay the rent. God knows that you won't make money off the HAMs.

SB DX @ ARL $ARLD040
ARLD040 Scarborough decision

ZCZC AE16
QST de W1AW
DX Bulletin 40 ARLD040
From ARRL Headquarters
Newington CT July 26, 1995
To all radio amateurs

SB DX ARL ARLD040
ARLD040 Scarborough decision

At its July 19 meeting, the ARRL Membership Services Committee (MSC) of the ARRL Board of Directors voted to remove from the Awards Committee Standard Operating Procedure (SOP) an administrative interpretation of a Board motion. The deleted text said in part, ''Thus it requires a favorable recommendation by the DXAC to initiate a country status review by the Awards Committee.'' All ARRL Directors were present at the meeting, and it was the sense of the meeting that the Awards Committee should review negative as well as positive country status recommendations of the DXAC.

On July 25, the ARRL Awards Committee voted unanimously that Scarborough Shoal (Huang Yan Dao) should be added to the DXCC List under Point 2 (a) of the Countries List Criteria. Committee members all felt that Scarborough meets the rules that were in place when the petition for new country status was received. Further they concluded that it meets the definition of an island under the UN Law of the Sea Conventions. China claims Scarborough, and there is an absence of other territorial claims. Finally, it is more than 225 miles from the nearest part (island) of China.

Awards Committee Chair, Chuck Hutchinson, K8CH, shared the results with DXAC Chair, Garth Hamilton, VE3HO, immediately after the vote. As announced in a June 30, 1995 news release, the DXAC voted 9 to 7 against recommending the addition of Scarborough to the DXCC Countries List.

Under procedures established by the ARRL Board, and because the Chairs are unable to effect a compromise, there is an automatic appeal. In the next step, the two committees will report the reasons for their votes to the MSC for recommendation to the full Board, which ultimately will decide the matter.

>to melt the solder to attach it. I heard another guru say solder
>will vaporize during a lightning strike. What should I do?
>Do they make spade lugs that clamp onto the end of the wire?

Warren (et al):
I have had good experience in going to an electrical contractor supply
house. I purchased a ring connector with wire entry end sized to take
my ground wire, and the mounting hole sized to fit my tower bolts.
I crimped the (large) ring connector onto the end of the cable tightly
(using large slip-joint pliers and a hammer!), then soldered.
Nice and clean installation.

Now, about your concerns regarding an actual lightning strike - I read a
German treatise several years ago, which explained to me the mystery of
how telephone lines can get hit and pass hundreds af amperes, and how
people can get hit and survive:
The current doesn't flow _IN_ the conductor, as much in a plasma
"jacket" which forms around the conductor during the strike/current
flow. Hence, #24 phone lines take a lightning hit, and can introduce
hundreds of amperes to attached equipment (assuming further paths to
ground, etc).

So, I figure I've crimped and soldered a connection. IF the solder
vapourizes during a strike, I figure that the plasma (with
freshly-vapourized solder assisting the plasma formation) will conduct
adequately, and I'll be as well off as by using any other method.
Personally, I wouldn't lose a lot of sleep over it - I would suggest,
however, that you install ground wires from each of the three tower legs
- this will improve the ground's capacity to disperse strike energy.

FWIW.

There is a very common thermostat used in equipment and appliances made
by a company called Clickson, or Klixson. I don't know the correct
spelling. I tried to find them in EEM and was unable to. Try an appliance
repair parts store. They are used in attic fans, home heating equipment,
etc. It is a small module, about the size of a small piece of candy.
They are available in a variety of temperatures. I have never seen one
variable. They can be made to be normally open or normally closed.

Good luck -

jrh

Buena idea, pero mejor no llamarlos es.*.*, que los asociaria
con Espanha. La mayoria de los hispano-parlantes no son espanholes.

De paso, los caracteres especiales de acentuacion (y enhe)
no se pueden usar en los newsgroups, dado que la mayoria
de los ordenadores solo usan 0-127 ASCII. Tus enhes las veo
como '=F1'

Tu idea es particularmente importante dada la hostilidad
de los yanquis a gente que escribe en otros idiomas. Uno se
la pasa sacandose ignorantes de encima.

Saludos,

Don't know for sure that this will work, but I've been told by others
that it does. There is a metallic "spray paint" available at
electronic parts type stores. You can use this "paint" to coat the
inside of the plastic monitor cover.

A few other things to try.... make sure that the cables to the monitor
are secured very tightly. Try some RF torroids on the cables. I
doubt this will do anything... but try a different resolution.

Just a few thoughts.

DX Bulletin 41 ARLD041
From ARRL Headquarters
Newington CT July 27, 1995
To all radio amateurs

SB DX ARL ARLD041
ARLD041 DX news

This week's bulletin was made possible with information provided by DX-NL, 425 DX News, Helen, VE2YAK, Mike, K3UOC, Charlie, KY0A, KE4IL, Murray, WA4DAN, Joe, NJ1Q, and Contest Corral from QST. Thanks to all.

SAUDI ARABIA. Mike, K3UOC, arrived back in the states earlier this month. Mike made 32,332 contacts between October 11, 1994 and July 6, 1995. 97 percent of the QSOs were on CW, the remainder on SSB. He plans on returning to the middle east on September 14 and reactivate 7Z5OO. The licensee of 7Z5OO is His Royal Highness Prince Khaled Bin Sultan Bin Abdulaziz Al Saud. The station is located at the Prince's Palace in Riyadh. Mike will be active on 160 through 10 meters and will bring 6 meter gear with him in the hope of his VHF operating application being approved by the Saudi PTT. QSL via W1AF.

CHRISTMAS AND COCOS KEELING ISLANDS, VK9C AND VK9X. Uwe, DJ9HX, plans to be active on CW and SSB from July 30 to August 16. Call signs mentioned are VK9CJ and VK9XI.

LAOS, XW. Andreas, DK9LM, ex TA1ZE, will be in Laos for twenty months and plans on applying for permission to operate.

NAMIBIA. Charlie, KY0A, will be signing either V52YG or V52/ZS6YG, from August 7 to 10. He will be active before sunrise and after sunset on 160 through 30 meter CW only. QSL via KY0A.

SAINT PAUL ISLAND. This operation should be on through August 2 on 160 through 6 meters, as well as some satellite work. QSL via WA4DAN.

IOTA NOTES. Yuki, JI6KVR, will be on the air July 29 and 30 from Amakusa Archipelago, AS-012. QSL via EA5KB. XJ1CWI will be an all

band effort operating from Pictou Island, NA-154, July 28 to August 2 or 3. QSL via the West Island Amateur Radio Club Inc, PO Box 884, Pointe Claire/Dorval, Quebec, H9R 4Z6 Canada.

One for a home heater or furnace will probably not work.
There are a number of 110 vac thermal's used in industrial
applications. Check out Grainger's or perhaps Newirk
Electronic. You might be able to make one work from a
defunct hot water heater.

Peace,
Jim

Working in maintenance is a lot like trying to herd cats.

Hell, really get their attention and have all their phone lines cut so they
have to depend on walk-in sales. That'd change their tune in a hurry.

Right - but most of the folks who work at places like AES and HRO don't OWN
the stores, they simply work there.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z JULY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 JULY AND FORECAST FOR 28 JULY - 30 JULY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 26 Jul
Daily Proton Fluence >1 MeV: 8.1E+04
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.1E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Jul 29 Jul 30 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Jul: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 26 Jul
Learmonth 5 2221 1121
Fredericksburg 5 7
Planetary 6 7

Observed Kp for 26 Jul: 2322 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Jul 6 Quiet to unsettled
29 Jul 6 Quiet
30 Jul 6 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

27 Jul normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Jul normal normal normal
29 Jul normal normal normal
30 Jul normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
27 Jul 15 near predicted monthly values with spread F during
local night.

Predicted Monthly T index for July: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
28 Jul 10 About 5% below predicted monthly values
29 Jul 10 About 5% below predicted monthly values
30 Jul 15 Near predicted monthly values
COMMENT: Darwin MUFs: about 15% depressed.Townsville MUFs: near
predicted monthly values to 10% depressed with spread F during local
night. Hobart MUFs: about 5% depressed.
Degraded comunications likely in the equatorial regions.

1676. Data Transmission Characteristics

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-27 00:00:00 UTC
From: jackl@pinetree.microserve.com
Message-ID: <3v8v2g$rnk@nuclear.microserve.net>
Source record: 241549

Perhaps someone can answer a few questions for me, relative to one certain aspect of the various digital modes.

Specifically, what are the tolerable interference levels for each mode, that is, how much separation in frequency (and/or amplitude) is required between two competing signals of the same type? What about signals of different types, such as data/SSB, or two different types of data transmission? Does anyone have copies of studies that have been published on this?

Also, what is the accepted minimum (average) frequency spread required in order for the human brain to distinguish between two tones?

73 and Thanks,

Jack WB3U

10-10 is a club designed to encourage activity on 10 meters. Each member has a number. To join you have to collect the first names and 10-10 numbers for (guess what?) 10 members and then send it in to whoever the 10-10 co-ordinator for your call area is. I think it costs (guess what?) ten dollars to join. That information is published in a number of places, not the least of which is World Radio, one of the monthly ham magazines. Most people who spend any time on 10 mtrs have a number (mine is 45049), which often is expressed on the air as a dollar amount (e.g. $450.49 for mine). Just get on the air and collect a few numbers and you'll be ready in no time. Use my number as one of your 10 if you want, no one will know the difference! Good luck.

: HRO via walk-in in the past. 2 years ago I moved to Minnesota and
: found RADIO CITY in Moundsview, Minnesota. The sales people are
: incredible - they have a qualified service staff - they know how to
: treat customers. I recently visited the store during a "Kenwood Days"
[snip]
This is exactly the reason that, whenever I am in the Sacramento area, I make it a point to visit The Radio Place. All of the sales staff are friendly. Often there is one or more local hams just ragchewing with the salespeople or whomever is in the store. They are not discouraged, even if they leave without buying as much as a PL-259 connector.

This is the kind of friendly place that I remember as a young ham in the 60s. While they have offered to ship anything in stock to Southern CA for me, they do not operate a mailorder business in the sense that AES or HRO does.

While I could save the exorbitant CA sales tax by buying from AES/Las Vegas, I consider it worthwhile to support a local store like this. The alternative is to be doomed to a future of dealing with the mass mailorder market like AES or HRO, about which there have been numerous complaints on other threads in this newsgroup.

DA>I'm looking into getting a new 2m and the FT2500M looks like a good deal.
DA>Does anyone have any comments about or experience with this radio? I would
DA>appreciate any info you could provide.

DA>Thanks,
i have had this rig now for 3 months. i will admit that while it lacks somewhat in desireable pre-installed features (no ctcss built in, just tone transmit. the ctcss decoder is about $60!), and the dtmf paging unit about the same price as the ctcss module (a seldomly used feature where i live, though.) however, on a whole, the unit's sensitivity (i've heard handhelds at 10 miles, over suburban terrain, with little difficulty. your mileage may vary), is nothing short of excellent, as well as what i consider to be commercial grade selectivity (take a close look at the radio body, it looks like a vertex, could it be a wold wolf in sheep's clothing?), as well as last, but not least, a full 50 watts of output power that punches a hole through the wasteland of 2-meters in my area. good, loud built-in speaker (bottom mount though :( ), 4-character alphanumeric display. modification for out of band receive and transmit <g> is simple (cut the green wire in the middle of the pc board), and ranges from 140-174 xmit and 140-180 rx. (sorry kiddies, no air band).

it's rugged as hell, and the microphone is anything but "micro" in size, as has been the trend lately with mobile rigs. it's just a tad bigger than the typical mic and fits nicely in your hand. backlit keypad has a nice soft amber glow. call AES and they'll give you a good deal on one. don't go to HRO.

1682. GB2RS News 30th July 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-27 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <806862959snx@llondel.demon.co.uk>
Source record: 241619
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 30th of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The Council of the RSGB has approved measures to reward long-standing members of the Society when the subscription rates change in September. Home Corporate members who have enjoyed 50 years of continuous membership will receive a 50 per cent discount on their fee, whilst Home Corporate members who have enjoyed 60 years of continuous membership will be granted free life membership of the RSGB. In addition, the RSGB will be introducing a new Junior Membership category. Young people under 18 years of age can join the new 'HamClub'. They will receive a special Junior Membership pack and an annual subscription to D-i-Y Radio. Although the Home Corporate membership fee will be increased by 2 per year, rates for Senior Citizens remain unchanged and fees for full-time students, family members, and overseas members who receive Radio Communication by airmail will be reduced.

Full details of the new membership categories and subscription rates are given in the August edition of RadCom. Copies are available to non-members who send an A4-size self-addressed envelope with 43p in stamps to: John Davies, August RadCom, RSGB, Lambda House, Cranborne Road, Potters Bar, Hertfordshire. The postcode is EN6 3JE.

Jim Terry, G4GEU, has unfortunately had to give up as RSGB QSL Bureau Sub Manager for the G4G series, after no less than 12 years of sterling service. The new G4G Sub Manager will be Malcolm Slater, G3NML, 46 Ladywood, Boyatt Wood, Eastleight, Hampshire. The postcode is SO50 4RW.

Two metre and 70 centimetre FM newsreaders are required urgently for GB2RS in the Cambridge - Mid-Anglia region. And a reserve newsreader is needed to cover for the GB2RS 80-metre broadcast by G5VO in the East Yorkshire area. If you would like to volunteer for either position, please contact Ian Kyle, GI8AYZ, as soon as possible. His telephone number is 01846 665034.

The 70 centimetre repeater at Macclesfield in Cheshire, GB3MF, which operates on channel RB7, experienced receiver problems on the 19th of July and is temporarily off the air.

There is a proposal for a new 70 centimetre speech repeater to be located in north-west Glasgow. For further details contact the Amateur Radio department at RSGB Headquarters - telephone 01707 659015.

Now news of some special event stations:

GB4SL will be on the air from the Sea Life centre at Tynemouth this weekend, the 29th and 30th of July.

The Strathmore Amateur Radio Club will be operating GB0TPS from the Tayside Police Spectacular, at Scone Palace in Perthshire today, Sunday the 30th.

The Grafton Radio Society is operating GB2GRS from the Tumulus on Hampstead Heath today, Sunday.

The Ballymena Amateur Radio Club is operating GB100NT from Patterson's Spade Mill this weekend, the 29th and 30th of July, in order to celebrate the 100th anniversary of the National Trust. Next weekend, the 5th and 6th of August, the Bury St Edmunds Amateur Radio Society will operate GB100NT from Ickworth.

From the 29th of July until the 5th of August the South Notts Amateur Radio Club will be operating GB2PIC from the 'Peak 95' Scout and Guides Camp. The event, which takes place in the grounds of Chatsworth House in the Derbyshire Peak District national park, will be attended by about six thousand Scouts and Guides from all over the world.

GB0BRW will be operated by the Meirion Amateur Radio Society during Barmouth Regatta Week from the 29th of July to the 6th of August.

Next weekend, the 5th and 6th of August, GB2TSR will be on the air from the Torbay Steam Rally at Paignton on the HF and VHF bands.

GR0VLB will be on the air on Fridays, Saturdays and Sundays throughout August representing the Voluntary Life Brigade in Sunderland. The station needs additional operators, and if you can help, please contact Ian Batley, G0IID, on 0191 548 3301.

And a special event station in Queensland, Australia with the unusual callsign "VI50 Peace", that's "V I Five Zero P-E-A-C-E", will be active from Tuesday, the 1st of August until the end of October.

Now some notes for your diary:

This year the RSGB will once again be holding a National Convention, this time at the Stafford Amateur Radio and Computer Show. The event takes place on the 19th and 20th of August at The County Showground, Stafford. In addition to a large trade show, the event will feature on-demand Morse tests, demonstrations, special interest groups and a bring and buy sale. There will be a large RSGB book and information stand, which will include an exhibition of photographs of historic radios and events, with the emphasis on Marconi. RSGB committees will also be present. Don't forget to take two passport-size photographs and the appropriate fee if you wish to take your Morse test at Stafford. An official show guide is published in the August RadCom.

The IEE will be holding an International Conference on 100 Years of Radio at Savoy Place in London between the 5th and 7th of September. One of the sessions, entitled 'Tuning and the Amateur', is chaired by RadCom 'Technical Topics' columnist Pat Hawker, G3VA. Lecturers at the

conference will include Professor Martin Sweeting, G3YJO, from the University of Surrey UoSAT programme. For further details contact IEE's Conference Services on 0171 344 5477 as soon as possible.

And the RSGB International HF Convention will take place at Old Windsor in Berkshire on the 9th and 10th of September. The event will feature lectures and presentations from some of the world's top HF operators and DXers, including Roger Balister, G3KMA, who will give two presentations on the RSGB's Islands On The Air awards programme. Further details of the RSGB HF Convention and a synopsis of the lectures are published on pages 20 and 93 of the August RadCom. Alternatively, details of the lecture programme and a booking form can be obtained from Marcia Brimson at RSGB Headquarters on 01707 659015.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Cocos Island, TI2JJP will sign TI9JJP from the 1st to the 15th of August.

From the Cocos Keeling Islands and Christmas Island, DJ9HX will be active from the 30th of July until the 16th of August. The callsigns will be VK9CJ from Cocos Keeling and VK9XI from Christmas Island.

And from Benin, DJ4IJ will try to be active as TY1IJ from the 28th of July for three or four weeks.

Next the Rally News:

An Amateur Radio Caravan and Camping Club rally is taking place at Lytchett Matravers in Dorset between the 28th of July and the 5th of August.

Today, Sunday the 30th of July, the 7th annual Rugby Radio Rally will take place at the BP Truckstop on the A5, about 2 miles north of Junction 18 on the M1. Talk-in will be on 2 metres, channel S22.

The Scarborough Amateur Radio Society holds its radio, electronics and computer fair at The Spa, South Foreshore, Scarborough, on Sunday the 30th. The event features traders, club stands, an RSGB book stall and a bring and buy stand. Doors open at 11.00 am and talk-in is on S22, on 2 metres.

The RSGB Woburn Rally takes places at Woburn Abbey in Bedfordshire - close to junction 13 on the M1 - next Sunday, the 6th of August. There will be a large RSGB bookstall and information stand, and over 100 other exhibitors. Further details, including directions, are given on page 11 of the August RadCom, or more information can be obtained from Norman Miller, G3MVV, on 01 277 225 563.

Now a note for your diary: the Galashiels and District Amateur Radio Society will hold an open day and radio rally at the Focus Centre, Livingstone Place, Galashiels on Sunday the 27th of August. For further information contact John Campbell, GM0AMB, on 01835 822686.

Now for the HF contest news:

The RSGB Islands on the Air - "IOTA" - Contest is taking place this weekend, and finishes at 1200UTC today, Sunday the 30th. Send RS or RST report and serial number plus IOTA reference. The IOTA reference for Great Britain is EU-005, and for GI and EI it is EU-115, although some offshore islands do count separately. The full rules for the IOTA Contest are in the March edition of RadCom. A full listing of qualifying IOTA island groups is published in the IOTA Directory, which is available from RSGB Headquarters. For further details of the Directory, contact Marcia Brimson at RSGB HQ on 01707 659015.

Next weekend, the 5th and 6th of August, the Romanian YO DX contest takes place. Brief rules are on page 20 of the July RadCom.

And next Sunday, the 6th of August, the second Ropoco contest will take place from 0700 to 0900 UTC on 80 metres CW. The rules are in the April RadCom.

And there are no RSGB VHF or UHF contests either this weekend or next weekend.

And now the solar factual data:

The period from the 17th to the 23rd of July saw solar activity at very low levels and the geomagnetic field decline from active to quiet conditions. Sunspot numbers declined and ended the period at 10, with a mean of 22. Solar flux levels also declined slightly from 72 units on the 17th, to 68 units by the 23rd. The average for the period was 70 units. No solar flares of any significance took place. The electron fluence increased to high levels on the 17th and remained at that level. The X-Ray flux averaged A1.8 units, declining from A3.4 units on the 17th to A1.0, the minimum reading, by the 23rd. The 90-day solar flux average on the 23rd was 75 units, one unit down on last week. A figure of 65 units can be expected at sunspot minimum. Geomagnetic conditions declined from 'active', with an Ap index of 25 on the 17th, to 'quiet', with an Ap index of 5 on the 21st and the 23rd. The average was Ap 11 units. The aa indices, as supplied by the British Geological Survey for the period from the 11th to the 17th of July, increased from very quiet levels with only 4.1 nanoTeslas on the 11th, to active conditions with 50.5 nanoTeslas on the 16th. Levels declined by the following day and were down to 36.0 nanoTeslas, with an average of 18.7 nanoTeslas, about K2.

I'll repeat the figures: spots - 27, flux - 75, Ap index - 11, X-Ray flux - A1.8.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 14th to the 20th of July, increased from 6.6MHz on the 14th, to peak at 8.3MHz just prior to the geomagnetic storm on the 16th. Levels then declined for the rest of the period and were down to only 5.5MHz on the 17th and 5.7MHz on the 20th, with an average of

6.3MHz. The darkness hour lows declined from 3.6MHz on the 14th, to 2.5MHz on the 17th, but then recovered to 3.0MHz by the 20th. The average was 3.0MHz. The daytime highs took place between 1900 and 2000 hours with the darkness hour lows between 0300 and 0400 hours. Sporadic E has been very poor except on the 21st, when there was a good opening to Scandinavia and Iceland. A report received from the "six-ten club" states that during the month of June there were 9 transatlantic openings on 28MHz and 7 on 50MHz.

I'll repeat the figures: highs - 6.3MHz, lows - 3.0MHz.

And lastly the solar forecast:

This week, with the more active side of the sun looking our way, solar flux levels are expected to increases to the mid 80s. Solar activity is expected to remain very low, with only small sub-flares taking place. Geomagnetic activity is expected to be at quiet levels. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 16MHz for the north. The darkness hour lows are expected to be about 12MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Hotel and G7 Uniform Zulu series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Foxtrot series.

The Ham Radio & More Show will discuss ham radio and the Internet on Sunday, July 30. With guests Scott Ehrlich and John Moore, the entire subject will be explored, from what is on the Internet involving ham radio to the all important common question..."will internet replace amateur radio?" The show airs live on 50 stations throughout the country on the Talk America Radio Network as well as on satellite and WWCR shortwave. Check the home page for more information, courtesy of BARC at:
http://www.acs.oakland.edu/barc/ham-more.html

>The issue that I wanted to point out that in order to live in areas that have
>populations in the millions we MUST be willing to compromise. Steve, what
>you seem to not realize is that ham radio is just that a hobby. I could see

but it's not "just a hobby" -- see the rule books for starters...get yerself
into public service and i'll bet you'll want to set up a good VHF system for
the time when the repeaters are knocked out...

why should someone's radio avocation take a back seat to, say, someone that
has a garage full of power tools and is forever working there with the
consequent noise?

>understand, I hope that I can express myself typing. As much as you as a
>ham has a right to construct a tower and beam, your neighbors have the right
>not to have towers in the neighborhood.

this is the "tyranny of the majority" -- why not have a CCR banning a particular
type of vehicle (no pickup trucks ever, no RV's ever, no hatchback cars ever..)
because those who drive a pickup or an RV mush obviously be a low-class
riff-raff that will just put the bus up on blocks and have all their relatives
move in...

>Now point two. Towers, trashy front yards, bad paint, junkers in the
>driveway, and just plain dirty neighborhoods.

you can have 4 of the 5 items you call out above w/o having any amateur
radio operators around -- you're reaching...even with CC&R's you can have
a neighbor fall victim to a disease or injury or just get old and become senile
or just decide he's mad at the world and is going to "show them" and stops
maintaining his place..

>Point three. Safty. I can provide pictures of towers and antennas that are

i'll bet most aren't actively used systems. you see that all over the place
where people used to have to put up a 60 foot mast to get TV and when cable
came in, they abandoned the antennas in place and never looked at them again.

those far outnumber amateur installations.

>CC is the most important thing that hams can do.

CC? what's that? or did you mean PM? everything breaks, eventually.

1689. Standard Service on C-5718DA

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-27 00:00:00 UTC
From: benjy@benjy.cc.vt.edu
Message-ID: <3v8059$o3l@solaris.cc.vt.edu>
Source record: 241626

I was pleasantly surprised recently when I had to have my Standard C-5718DA serviced. Whenever I first powered on the unit, the VHF VFO display would blink and the radio would not transmit. The problem would usually go away after about ten minutes. The unit was three or four months out of warranty when I shipped it back for repair. It turned out the problem was a design or manufacturing defect with a VCO module. Standard replaced the transceiver free of charge even though the warranty had expired.

I want to commend Standard service for "doing the right thing" by replacing my rig. Technically, I guess, they could have charged me for the repair. The service was speedy, and their technical guy, Matt Adrian, was a pleasure to deal with.

Christopher,
Greetings from HQ! On the first of next month (next tuesday), there
will appear an automatic post about accessing the ARRL on the internet.
However, to briefly summarize (without duplicating the post):

The ARRL's current internet connection does not suffice to allow us to
maintain a public FTP archive or Telnet site here at headquarters. However,
we have established a World Wide Web page and a remote FTP archive (both
provided by Scott Ehrlich, WY1Z of the Boston Amateur Radio Club) on
http://www.acs.oakland.edu/barc/arrl.html and oak.oakland.edu, respectively
(directory pub/hamradio/arrl and several subdirectories). We also have direct
email to most HQ staff (see League Lines in either the July or August issue
of QST for more information).

The address info@arrl.org is for our email Information Server (files sent
via email in response to an email). NOTE: Do NOT send any email to
info-serv@arrl.org - this is the address that Info-Server messages are
addressed FROM in order to prevent mailier error messages from creating an
endless mail loop.

Source record: 241631

I am interested in purchasing an ICOM 738. I have basic knowledge about this rig and have read QSTs review on it. Now I am searching for comments from people who have actually used this rig. Those of you who have actual hands-on experience w/ this rig: How do you like it? Is it user friendly? Does it meet your expectations in terms of performance? What do you think its strengths and/or weaknesses are? How does it compare (better/worse) to other similar-priced HF rigs? I would really appreciate any such information anyone can give me and any additionaly comments/suggestions you may have. I want to thank all those who answer this post in advance -- "Thank You".

(I am wanting to buy a new HF rig in the next week or two. I have pretty much decided to get the ICOM 738, but I did want to get some "personal" comments about this rig before I actually handed over the considerable amount of money (for me, atleast) for the purchase. :))

Technical superiority? Nah. Current communications superiority? Yup.

jcumming@dgim.doc.ca (Jim Cummings) writes...
Therefore, those claiming that CW is technically superior to digital
communications are petulant, if not ignorant.

Nobody is claiming CW is technically superior. We're trying to get the point across that for communicating with the majority of real HF stations, that exist and are operating NOW, CW beats the only other mode available to the majority of real HF stations.

The fancy digital mode mentioned in the referenced article is nice, and I don't doubt its conclusions whatsoever. But if you'd like to make real contacts with real stations, 99.9% of whom don't run that fancy digital mode, you have two modes to choose from: SSB and CW.

>Insert comments about quaint, backward, antiquated hams holding up progress here<

Maybe I'm breaking some big news here, but this is a *hobby* to a great many of us. We don't have thousands of dollars to throw at it just because someone invents a new mode and thinks we should all use it too. Some folks at some places in the world couldn't get the stuff if they had the money and wanted to spend it. Some folks just plain aren't interested in having their computer talk to someone else's computer, while both operators are out painting the house.

: I'm a happy TechPlus -- KC5PRQ

The FCC misspelled my sister-in-law's name (Drunheller). So we
submitted a form 610 requesting a change-of-name, and attached a note
explaining that her name was misspelled. She got the corrected license
within one month. She retained her call sign because we specifically DID
NOT ASK for a call sign change.

Your license is still valid, even though the name is misspelled. After
all, I think it's rather clear as to who is licensed. If it takes a month
or two to get the corrected license, why worry?

The navy still has a bunch of stations in the 20-30 kHz range. One
of them, NLK (Jim Creek), is not too far from here. The antenna
spans an entire mountain foothill valley. All these stations are
controlled with cesium clock.

The UN Naval Observatory in Washington DC has data on these stations.

>common sense would dictate, to keep the unit at a full charge.

Ah, that's not the kind of storage I was talking about. To me, storage
means putting something away for a relatively long time (months or years),
like in a warehouse. If you mean "storing" overnight for use in the morning,
that's entirely different. A *good* charger, one that senses state of charge
and modifies its behavior accordingly, is indeed a good place to "store" a
radio ready for instant use. Unfortunately, many of the drop-in chargers
sold with radios don't fit this criteria (a few do).

While a battery kept constantly topped up on charge won't last as long
as a discharged battery stored away, a *working* battery does need to
be topped and ready to go. You pay a price for that because there are
only a relatively small number of charge/discharge cycles in any NiCad,
around a 1,000 is typical though more or less may represent the practical
working life of a battery depending on the particulars of the usage pattern
and charging method. So, batteries you *use* are going to wear out. That's
just the way it is.

Jim N2VNO WROTE
>We're looking at a building lot that's within 1/4 mile of some
>high tension power lines. How much noise do those suckers
>radiate? Is it mostly HF or do they get into VHF/UHF? Is there
>any weather-related noise from them?

I have some 150KV lines that run across the back of my property
and they do make a little noise on HF. I have minimized the noise
by putting baluns on my dipoles and tri-band beam. Recently, another
ham and I were talking to another station at the same time on 40M
and there was severe QSB. I had a better copy than the guy two
miles down the road and he doesn't have any power lines.

I have also installed a ground system which I believe also helps
a little. I haven't noticed any noise on VHF/UHF. Other than the
set of power lines across the back edge of my property, we have
a lot that is the envy of many. People walk out into my back
yard and say "this is just like a park".

The moral of the story is if you like everything else about the
lot, buy it. You can work around the power lines.

>the was indeed in real time. The list price was $US395 - so it also
>destroys the myth that amateurs cannot use advanced communications
>techniques.

I am sorry that you missed the whole thrust of my post. The very
first sentence (re-quoted below):

>: I think that there is more to suitability of CW for DXing than merely
>: copying weak signals.

I was focussing in on the ability of the brain to copy signals that
has significant QRM and not just the weak signal copying ability.
This situation is not just lower signal to noise ration as the noise in the
case of QRM looks similar to the signal in more ways than white noise
does. It is harder to discriminate signal from QRM than from QRN
and so the processing benefits more from getting a human with extensive
domain knowledge involvede earlier in the decoding process.

Now switching to your focus on weak signal copy:

If we just want to talk about the weak signal copy then consider
the following: Use the machine to discern the weak signal and still
involve the brain in decoding where it can use its superior domain
knowledge to extract the message. I am willing to bet that this would
be better than just using the machine itself.

>: (2) CW gets the human brain invoved in decoding at a fairly elemental
>: level (unless you try decoding RTTY by sound - not hard but
>: hardly worth the effort)

>Granted, CW is a simple mode whereby minimal equipment is required. But
>considering its ineffeciencies, this supposed factor in favour of this
>mode is continually diminished as technology develops.

It is not the equipment simplicity as much as getting a better computing
engine (the brain) involved earlier in the process before information is
lost in the decoding process. The CW mode allows this to occur.

Let me address the remark about HAL P38 about decoding messages that
we cannot hear. We cannot hear the radio waves directly either. We
have to use receivers to do that. If we really want to compare apples
to apples, how about a receiver with a filter and discriminator like the
ones in P38 but for CW, regenrate a tone and let the brain decode the CW.
Don't you think that this combo do better at CW than the P38 at RTTY?

>: If you agree with (1) and (2) then the superiority of CW for dxing should
>: be obvious. Add to this the easy availability of equipment to get
>: the brain involved and the conclusion that CW is better seem to be a
>: no-brainer. (sorry, could not resist.)

>Well, since your premises were false, so goes the conclusion.

I disagree. Please see above.

In many places with more restrictive CC&Rs, they don't. You will find restrictions on "workshops" and the use of power tools in many CC&Rs. They are in mine.

>>understand, I hope that I can express myself typing. As much as you as a
>>ham has a right to construct a tower and beam, your neighbors have the right

>because those who drive a pickup or an RV mush obviously be a low-class
>riff-raff that will just put the bus up on blocks and have all their relatives
>move in...

Vehicle restrictions are not uncommon either. I the development where I own a rental townhouse, and where I live now, such restrictions exist. They prohibit parking RV's, trailers or commercial vehicles in driveways except temporarily for loading. Loud, smokey vehicles are prohibited and inoperable cars have to be kept in your garage. Oh yeah - towers are prohibited as are any external antennas. The units are all prewired for cable TV - I had a TVRO antenna and a dual band Diamond X50 in my attic to comply.

Some common rules I have noticed in "planned unit developement" CC&Rs is no owner is allowed to do anything that will keep the other residents from the quiet enjoyment of their property. And you can't do or build anything that could cause the cost of association's liability insurance to go up or be cancelled.

[snip]

>>Now point two. Towers, trashy front yards, bad paint, junkers in the
>>driveway, and just plain dirty neighborhoods.

Regardless of the "scientific" evidence Steve claims to have saying that towers do not effect property value - towers effect the "curb appeal" of home. The appearance or condition of one home CAN effect the value of the house next door - ask a realtor. This is especially true of condos and townhomes where you may have your own yard but the units are attached.

[snip]

>>CC is the most important thing that hams can do.
>
>CC? what's that? or did you mean PM? everything breaks, eventually.

I am guessing he is referring to "Common Courtesy".

Chris,
You don't need to learn code for a Technician class license. But to upgrade you do need to learn Morse. I recently bought the Gordon west tapes at Radio shack and I highly recommend them. Also for the computer there is "Supermorse", not sure where on the net it is though. Get the book "Now your talking" (radio shack), it'll teach you what you need to know for the tech license and is a great reference book after you pass. Good luck to you!

: Anyone who has info on this type of material I would appreciate hearing
: from.

I did see some of these stations. The one at New Brunswick, NJ around
16kHz had a 36th harmonic that often came in, in Philadelphia, as a
heterodyne on WEAF, New York, 660kHz, 50 kW. I think the call at New
Brunswick was WTT. I visited it. The transmitter was a 250 or 300
kw Alexanderson alternator, coupled by a real nest of cable to the end
of an antenna a couple of hundred feet high and a lot longer than 1 mile.
At Rocky Point, L.I., N.Y. one LF antenna was several hundred feet
high and about seven miles long. It was used by the transatlantic
telephone circuit of AT&T. The transmitter had 20 10 kW water
cooled tubes in push pull parallel, and could put out 250 kW
on a single sideband woith the suppressed carrier at 60 kHz.
The signal was received near Cupar, Scotland, which I also
visited. The westbound circuit originated at Rugby, England,
and was received in Maine. It used the lower sideband. In
times of very low sunspot activity this circuit could be maintained
at only 25 kW, 24 hours a day, with slight fades four times
a day at sunset and sunrise at the two ends.

Most home thermostats that mount on the wall and control a central system are built for 24V AC. They control a relay (contactor in their jargon) that switches the air conditioner on. Obviously you want one that closes when the temperature rises. This rules out most thermostats built to control only heaters. The thermostat assembly from a junked window air conditioner (probably not a real common item up in MI) would work well, as it is designed to handle 120 VAC.

>just the way it is.

Just adding to the information Gary has provided here.

1,000 charging cycles is a typical lifespan for a NiCad. They are usually considered "worn out" when they can no longer maintain more than about 80% of their rated capacity. Some of the things that reduce life are:

1. Using rapid chargers. Most trickle chargers use a rate somewhere around C/10. Using a "one hour" rapid charger at C/1 cause a lot of heat that is very hard on the battery. BTW, a C/1 rate charger will not fully charge a battery in one hour - it will require at least one or two more hours on trickle to get to full capacity. Radid chargers may cut the lifespan of your battery by as much as 30% or more (only 700 cycles).

2. Overcharging. Again the heat destroys the cells. Trickle charging a fully discharged battery (not less than 1V per cell) at C/10 take about 15 hours or about 150% of capacity. Leaving the battery on a trickle charger for longer than that (like days, weeks, or -argh- months) will cause excess deterioration.

3. Improper charging enviroment. Don't charge cold batteries. Let them get up to room temperature before charging (give it some time to warm up internally). Warmup is most important when using a rapid charger - rapid charging a cold battery can cause cells to burst. For trickle charging get the internal temp above 40F, for rapid charging get them above 60F. Don't charge a wet battery. Let them dry out thoroughly.

4. Most capacity problems are due to undercharging or non visable damage caused by (but not limited to) the items above. Things like reversed or otherwise damaged cells will dramatically reduce the capacity of a battery even though the battery takes some charge. "Memory" is the most often misdiagnosed battery problem. It just doesn't occur in modern NiCads as much as we think - it's usually undercharging or damage that reduces capacity.

If you are looking for a nice way to carry an HT while biking, skiing, etc. contact GALL'S at 800-477-7766. They sell a radio chest harness that will cary an HT and keep it vertical. The harness is made of Cordura and even has a pocket for pen and a cargo pocket.

GALL's sells mostly to the police/fire/EMT trade, but have a number of items of interest to hams, such as the check mount above, HT cases, mobile brackets, etc.

1722. Question on ARRL awards

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-27 00:00:00 UTC
From: js024b@uhura.cc.rochester.edu
Message-ID: <1995Jul27.201206.10951@galileo.cc.rochester.edu>
Source record: 241659

I just have a quick question on ARRL awards. I sent in a request for RCC on July 2, and I haven't received anything yet. Because I sent it in just before the July 4 holiday, I don't even know if the ARRL received my request. Does anybody know what the usual turnaround time with awards is? Thanks.

: My garbage is shorter than theirs.
: And every few months I change mine.

that is the advantage to their garbage, I no longer need to read it.
On the other hand, I need to read your garbage ... sigh. Besides, their
garbage is needed for automatic routing, yours merely fills up disk
space.

Trash & Treasure

Divisional Trash and Treasure

When is it?

Nest Sunday 30th July

Where?

Amateur Radio House Wigram Street Parramatta

Entry is free to everyone, sellers are allowed in at midday, buyers in at 1 pm.

What to bring with yoy?

Money, and lots of it ... and a large truck for some of your purchases.

Don't forget -- hot dogs and cool drinks will be on sale.

If you want to reserve a spot give us a call at the office.

Bargains galore -- we need the space!

Riverina Field Day

The Wagga Amateur Radio Club will be holding its 1995 Riverina Field Day on the 6th August 95. The venue will be the Police Citizens Youth Club Gurwood Street Wagga commencing at 9.00 am.

The entrance fee will be $6.00 for adults and $4.00 for senior cardholders and pensioners, school children free.

There will be the usual displays from Daycom, Andrews Communications, Melbourne Satellites, Strictly Ham, ATV, ATN Antennas, Icom. There will be demonstrations of the latest in mobile antennas from ATN and also the latest from Wally VK4DA on ARDF. There will be a mobile foxhunt around the city so bring your gear with you.

Disposal tables will be available on site for selling and buying.

Food and drinks will be available from the club and if you desire something a little stronger the leagues club is across the road.

There will be convention dinner on Saturday 5th August so if any one wishing to attend could they please let me know on the 23rd

July as we have to make the booking. The cost of dinner will be $16.50 and if you book and cannot make it please let us know by the 30th July as we have to pay for the number booked whether you turn up or not. So please let us know.

Accommodation is available at the PCYG for $8.00 per night which includes a hot breakfast, so bring your sleeping gear, or accommodation is available at the Junction Motel or at any of the many motels, hotels and caravan parks.

Directions on the day will be available on 146.750 Ch3 on the day.

For more information contact Paul VK2KVY on 069 243009 or on packet on VK2KVY @VK2KAW and we will get straight back to you with the information you request.

News briefs
NEWS BRIEFS

Australian Hearing Services, in a joint venture with Audiosys of Switzerland, has developed a hearing aid that features digital signal processing (DSP) to offer improved performance over conventional hearing aids.

The in-built digital signal processor can be switched to cater for noisy environments, adjusting sound levels automatically, and separating speech from background noise. It also has a setting to filter out interference from digital mobile phones, and can be used with induction loop systems in cinemas and other public places.

--Sydney Morning Herald

****

AUSTEL, the telecommunications regulatory body, is seeking submissions from interested parties on the Telecommunications National Code, which was introduced a year ago.

The Code was designed to address environmental concerns that telecommunications carriers must meet when installing their network infrastructure, such as mobile phone towers and cables. Under the code, the carriers are exempt from the usual planning and environmental requirements.

The Minister for Communications and the Arts, the Honourable Michael Lee MP, has directed AUSTEL to conduct an inquiry into the Code.

The inquiry will consider:

- the effectiveness of the notification and consultative requirements, including consultation with the community;

- the effectiveness of co-location and co-siting requirements;

- the effectiveness with which various State and Territory organisations have met their responsibilities under the Code; and

- awareness and understanding of the Code by authorities and the public.

Submissions are invited from all interested persons; these should be lodged by 31 July. You can send your submissions to:

National Code Review
AUSTEL
PO Box 7443
St Kilda Road,
Melbourne VIC 3004

A discussion paper on the Telecommunications National Code is available on request from the Sydney AUSTEL office on (02) 893-9182

-- from an ad. in the Sun-Herald, sent to us by Steven Pall VK2PS

****

Following up on the ABC Four Corners program, "Waves of Fear", Stewart Fisk, in The Australian, criticised the telecommunications industry over its handling of the handling of the issue of the possible health risks associated with exposure to electromagnetic radiation. Drawing comparisons between statements made by the cellular carriers and the tobacco industry, Fisk warned against drawing conclusions about the long-term effects of using cellular phones, when the devices have only been around for a few years.

He also made the following comment, which will be of paricular interest to Radio Amateurs:

"...most of the research deals with radio systems we used a decade ago, when people were concerned about radar and ham radio; there is strong evidence linking these to increased incidence of leukemia and lymphoma."

Is anyone aware of health studies that have been conducted involving Radio Amateurs? We'd be interested to find out.

Mr. Fisk also mentions a report on the subject by Stan Barnett of CSIRO. He says, "The Minister for Communications, Mr. Lee, sat on the Barnett report for nearly a year, then `officially' released it without printing any copies, and without telling anyone it existed."

He also suggests we try to get a copy of the report, by ringing the Spectrum Management Agency on (06) 256-5555.

-- The Australian

Record for 3456 MHz

RECORD SET AT 3456 MHZ

Extraordinary conditions for tropospheric propagation in the
US Midwest have resulted in a new overland record on the
amateur 3456 MHz band.

At 1224 UTC on July 12, Al Ward, WB5LUA, in Allen, Texas,
worked Gary Morhlant, WA0BWE, in Maplewood, Minnesota,
a distance of 841 miles. The previous record of 736 miles
was set on May 1, 1992, between WB5LUA and W9ZIH, in Malta,
Illinois.

As is often the case, this record-breaking activity began
lower in frequency, with an initial contact between WB5LUA
and WA0BWE on 432 MHz, with signals ''59'' both ways, according
to Ward. An equipment problem forced them to skip 1296 MHz
(where the overland record is 1287 miles).

2304 MHz came next, and the first Texas-Minnesota 2304 MHz QSO
(where the record is 940 miles). Contact was then "easily
established" on 3456 MHz. WA0BWE was running about 5 watts;

WB5LUA was running 100 watts to a 5-ft dish at 65 feet.

On July 13, excellent tropospheric propagation continued in
the midwest, with perhaps more distance records to come as
a result. Thanks to WB5LUA for prompt reporting of these
developments.

--ARRL Special Bulletin 29, sent to us by Peter Vernon VK2JPJ

10m repeater

NEW 10 METRE BAND REPEATER

The Adelaide 10 meter repeater 29.620 / 29.520 MHz is now
operational. The repeater is located South East of Adelaide.
Any reports can be sent to VK5VB@VK5LZ. If you hear Tony VK5AH
on air make sure you thank him for his efforts as he has
driven/constructed/installed the repeater.

-- Phil VK5VB

IPS report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(14 JUly - 20 JULY)

ISSUED ON 21 JULY 1995

SUMMARY
Date 14 15 16 17 18 19 20

10cm 74 74 73 72 72 71 70
A 6 6 28 24 10 9 (10 ESTIMATED)
T 22 30 24 42 24 17 8

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET ON 14TH AND 15TH JULY, INCREASING TO QUIET TO UNSETTLED WITH MINOR STORM LEVELS 12-15 UT AND ACTIVE LEVELS 15-21 UT. THE FIELD REMAINED UNSETTLED ON 17TH WITH ACTIVE CONDITIONS 09-12 UT AND 15-18 UT, AND MINOR STORM LEVELS 12-15 UT. THE FIELD WAS QUIET TO UNSETTLED WITH ACTIVE CONDITIONS 12-15 UT ON 18TH, AND REMAINED QUIET TO UNSETTLED ON 19TH AND 20TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES DURING THE PERIOD WERE MOSTLY NEAR PREDICTED MONTHLY VALUES. THERE WERE PERIODS OF ENHANCEMENT 0F 20 TO 50 PER CENT DURING LOCAL NIGHT ON 15TH, 17TH, 18TH AND 19TH. SOME SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 17TH, 18TH AND 20TH JULY.

FORECAST (21 JULY - 27 JULY)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE ON THE 23 AND 27, OTHERWISE QUIET TO UNSETTLED.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES, DEGRADED CONDITIONS DURING LOCAL NIGHT HOURS.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Blue Mts

The Blue Mountains Amateur Radio Club invites all interested people to attend our August meeting.

In the interest of inter-club relations we are pleased to announce that Ken Christianson, VK2QD, from the Fisher's Ghost Club has agreed to be our guest speaker.

Ken is going to talk about broadcast transmitters and associated equipment. It is going to be an interesting night, especially for all you QRO operators, so please come along.

The meeting will be held at the Blue Mountains Amateur Radio Club venue on Friday, 4th August, 1995 at 8.00 pm Springwood High School, corner Grose Road and Chapman Parade, Faulconbridge; enter from Chapman Parade.

The customary cuppa and scones will be served.

Thank you

Alex, VJ2ICL Publicity Officer

Source record: 241664

I had the same types of bad experiences with AES via phone orders and HRO via walk-in in the past. 2 years ago I moved to Minnesota and found RADIO CITY in Moundsview, Minnesota. The sales people are incredible - they have a qualified service staff - they know how to treat customers. I recently visited the store during a "Kenwood Days" sale. I didn't really have any specific "need", but I wanted to see what they would have. The place was absolutely packed with hams (apparently, the local hams know they have a good thing right here in Minnesota). 4 poor salespersons were running around like chickens with their heads cut off - trying to help everyone - I'm sure this is the type of thing that owners of businesses dream of. I walked out with a TM251A and a KPC-9612...simply because I got some quick attention, they grabbed a salesman for me that was the "packet expert", and they knew their products. This guy (Ron {N0KMR} I think...) took the time to explain to me that I would need to adjust the deviation for the TNC to operate at 9600 once I got the radio hooked up, frequencies for 9600 activity in my area, and so much information I couldn't even absorb it all. I explained that I really didn't know what he was talking about. He spent several minutes (around 10-15) explaining the procedure to me during the middle of a "big sale". I also recently brought their service department my old SB200 linear for service. They took the time to call me several times to let me know the status of the repair (they were having trouble locating a T/R relay for it). I purchase ALL of my ham gear there now. I give them the business because they want to make sure that I'm a happy customer, and they service what they sell. I imagine that they do a pretty healthy phone sales operations for a single store. I would not hesitate to recommend them to any ham contemplating a purchase.

Radio City 800-426-2891 and they have a Web page too, but I don't have it in front of me right now. Their email address is radiocty@skypoint.com.

Aren't these repeaters also tied to the 444.7 machine on Mt. Bullion? I
don't live in the central valley anymore, and haven't used these in quite
a while. I think there is a 2M port on Bullion also.

>Steve KA6S
>

The issue that I wanted to point out that in order to live in areas that have populations in the millions we MUST be willing to compromise. Steve, what you seem to not realize is that ham radio is just that a hobby. I could see a unbending non-compromising attitude if ham radio was money in the bank. It is not. What hams fail to understand is that when they are looking for a house, it is up to them to research what, if any CC&R's would effect them. If they found CC&R's to be more than what they could handle, then DON'T BUY THE HOUSE! Use your freedom of choice, and choose a neighborhood that will allow antennas and towers. Let others use their right to choose a neighborhood free of towers. The shoe is on both feet. This is hard to understand, I hope that I can express myself typing. As much as you as a

ham has a right to construct a tower and beam, your neighbors have the right not to have towers in the neighborhood.

Now point two. Towers, trashy front yards, bad paint, junkers in the driveway, and just plain dirty neighborhoods. All of these effect property value, some more than others. Simple fact, and any real estate agent will tell you this. Why do you think they want you to clean up your home before they try and sell it? To improve it's market value. Value can be not only a cash value.

Point three. Safty. I can provide pictures of towers and antennas that are falling down. I belive that the city of Orange made someone clean up the roof, as parts of the antennas where falling onto the freeway. This ham more than likly NEVER did any periodic inspections on these antennas. CC is the most important thing that hams can do. As the posts above indicate, a short sighted pattern of thought can lead to disaster. Wind is not the only enemy to antennas. I will not go into detail about all of the bad things that can happen due to bad CC practice.

I don't live there anymore, I live in a dorm at Edwards AFB in California. I can't have antennas, but I feed my ham radio habbit with lots of 1200 Mhz DX accross the desert. Thanks to everyone for expressing ideas, showing how diverse ham radio really is. Good job!

>Yes, if you have US$1500 to spend on a PC, plus whatever for the digital card,
>you too can run the latest high-tech digital modes.

Duh. $1500 these days gets you a brand new Pentium with half a gig of disk.
All you need to run a card is a old wheezer of a 8088 PC, costing somewhere
in the free-to-$150 range depending on your scrounging/repairing abilities.
"Whatever for the digital card" is $400 tops for the new superwhizzy HAL,
much less for a used TNC.

SB SPCL ARL ARLX034
ARLX034 CREN Contest

As part of the 50th anniversary celebration of CREN, Club de Radio Experimentadores de Nicaragua, there will be a special contest on Sunday, August 6, 1995, from 0000 to 2400 UTC.

Choose CW, SSB or RTTY, single operator only, on 40, 20 and 15 meters. Exchange signal report and consecutive serial number.

For 50 points, work YN1YN, the HQ station of CREN, which can be worked only once. For 10 points, work YN1ATM or YN1OC, founding members of CREN, also only once each. Other YN stations net 5 points each. And all other QSOs net 1 point per QSO. Final score is total QSO points multiplied by 50. Send log and summary before September 8, 1995, to CREN, Box 925, Managua, Nicaragua.

The FCC only requires a mailing address where they can contact you. No
station address is required. There will only be one address box on your
new license - no more "same as mailing address" in the station box.

Compromise what? Are you willing to give up your constitutional rights?
What does population size have to do with compromise?

> Steve, what
> you seem to not realize is that ham radio is just that a hobby. I could see
> a unbending non-compromising attitude if ham radio was money in the bank. It
> is not.

So you're saying that if I could make money from amateur radio that
would justify forcing towers into areas? And as for a non-compromising
attitude, that seems to mainly come from those opposing antennas.
All the has been asked for in the past is "reasonable accomodation". That
is *hardly* a non-compromising position.

> What hams fail to understand is that when they are looking for a
> house, it is up to them to research what, if any CC&R's would effect them.

> allow antennas and towers. Let others use their right to choose a
> neighborhood free of towers. The shoe is on both feet. This is hard to
> understand, I hope that I can express myself typing.

This is a compelling argument if the owners made up the CC&R's, but in
general, they don't. Most CC&R's are established by the builder of a
subdivision. The builder wishing to make the development look new
and spiffy places a load of reasonable and unreasonable CC&R's on
the properties. Since the bulk of housing in most suburban areas is
built as subdivisions, this means amateurs wishing to erect antennas
either have to live in much older housing, or move out into the country.
My guess would be that if you polled the average home owners in any
given subdivision, the vast majority would have no idea what was allowed
and what wasn't allowed until they tried (or did) something that wasn't
allowed.

> As much as you as a
> ham has a right to construct a tower and beam, your neighbors have the right
> not to have towers in the neighborhood.

Equal rights, sure, but not equal opportunity given that the restrictions are in
place before the neighborhood was established. In some parts of the country

such as the south west, it's nearly impossible to find any selection of housing that isn't cover by CC&R's.

> Now point two. Towers, trashy front yards, bad paint, junkers in the

> tell you this. Why do you think they want you to clean up your home before
> they try and sell it? To improve it's market value. Value can be not only
> a cash value.

Wrong. Those do *not* materially affect the value of a property. If they did, they'd be in the appraisers handbook, and they aren't. What they may affect is "curb appeal", i.e., the ease with which a real estate agent can sell your property. That's *not* the same thing as value. Any real estate agent that tells you otherwise is being dishonest and self serving. It's less work for them to sell an apparently "nice looking" property over one that isn't.

> Point three. Safty. I can provide pictures of towers and antennas that are
> falling down. I belive that the city of Orange made someone clean up the

> sighted pattern of thought can lead to disaster. Wind is not the only enemy
> to antennas. I will not go into detail about all of the bad things that can
> happen due to bad CC practice.

CC&R's are *not* the place to address safety issues. Safety issues are the domain of building codes. Antennas as structures are subject to local, state, and national building codes. Those codes ensure the safety based upon sound engineering practices as opposed to aesthetically motivated nonsense.

It all started pretty innocently...I bought an old Kenwood TS-520 for my home station (previously populated by a collection of HW-101s (I still have one!). Well...the internal speaker tends to be less than adequate, so I went out and found a matching speaker (there goes 7 inches more of my desk)...then I decided I wanted to work split...went out and found a VFO-520 (there goes another 7 inches)...fine...but then, whilst at the last Foothill, I saw the matching AT-200 antenna tuner...he wanted $100 for it which strikes me as a bit pricy, but I'm sure I will end up finding one and losing another 7 inches....reminds me of my first Amiga 1000...it had SOTS expansion and by the time I was done, it was 36 inches wide...had to remove the center support from the desk hutch to make room...

Jason,
Have you ever seen a variable pitch playback machine?
I've only heard via rumor that there is technology available to shift
the pitch of a RECORDING without shifting the time...
Your right, us VE's are mostly willing to accomdate any handicap,
give enought time to prepare, but a variable pitch recorder/playback
would stump me! Maybe I'm just ignorant. Educate me!
Remember I don't get paid to VE, I don't even keep any of the funds
collected. So don't suggest the latest wiz-bang mega-buck machine.

>being in the forefront....

Which is fine, if you have a PC handy, or even own one in the first place. If not, you have a choice of two common modes on HF: SSB or CW.

Yes, if you have US$1500 to spend on a PC, plus whatever for the digital card, you too can run the latest high-tech digital modes. If not, well you're a backward, paranoid, protectionist, wetware-conditioning damaged, hazing traumatized, game playing emitter of beeps, who we'll just encroach our digital signals upon, since your chunk of the band is wasted anyway. You bought your HF rig used for $200, and can't afford all this, you say? Too bad, maybe you should take up knitting if you can't play hardball with the big boys.

>other than replacing the monitor?

>73 es tnx de kg9DE

I'll bet it's the CPU and not the monitor. Have you tried turning off
the monitor while the computer is running?

My computer here was trashing 20m - and while replacing the control
grid wire in the monitor with RG-174 did help, the bulk was coming of
of the motherboard.

Try this: take a extra piece of coax maybe 6' long, put a PL-259 on
one end, strip the jacket and braid back about 3" on the other end, and
put a piece of heat-shrink about 4" long over the exposed area - i.e.
insulate it. Turn your rig on, tune to a quiet area of 20 (with a 3"
antenna, it'll be almost anywhere) and poke around your computer with
the home-made RF sniffer probe. As you find the hot spots, crank down
the RF gain and home in further. You'll soon find the source. Then you
can figure how to bottle it up, or tone it down, or eliminate it.

I get flamed with :
>OK. Now we're getting somewhere and not just reminiscing about how
>prepared we were for the test (like a previous poster...)

Let me put this in terms that you might understand. The FCC is supposed to be a test which measures a persons knowledge of the physics and engineering of radio communications. It is also a measure of knowledge of the conventions of radio communications. It is not, however, supposed to be a measure of the ability to memorize circa 300-400 multiple choice questions.

The pool of questions for any exam doesn't change all that much from edition to edition in the sense that the material covered is pretty much similar. Thus, it is my claim that it really doesn't matter WHICH edition of a book you use. Note that the TEXT of the ARRL preparation books doesn't change all that much from edition to edition. Once you know the material, it no longer matters whether the circuit has a 1KOhm resistor or a 4.7KOhm resistor.

The woman is Barry's widow. She is not technically inclined and can be
nice when she wants to be. One of the younger sales persons is her and
Barry's son, a typical salesdroid. The older gentelman is the manager,
he's the wise-ass.

BTW, I've only been in there 2x myself. The first was many years ago when
Barry was still running the place and his "trophy wife" was just a pretty
face. The last time was about 4 years ago, and they wouldn't beat the
price I had gotten somewhere else. Of course that was a phone quote, so I
could see why they wouldn't do it without seeing something in print. But
I've been to many places when they don't know me and they still take my
word.

Nice car. I seem to remember some discussions about BMW's view on radios in their cars in one of the issues of the BMW CCA magazine. At that time they were warning not to install any radios in their cars except for one from the dealers. This included cellular phones. And I doubt that any 2M rigs are available from BMW dealers. Any other radio gear voided the warranty. Since the ECU computers in BMW's are EXPENSIVE, I'd sure check into it very carefully.

Good luck.... Mark AA7TA

I've found some undocumented behavior while trying to get my ICOM IC-W21A do cross-band repeat operation. Now I can get into a mode that make my radio retransmit in UHF what it receives in VHF, but only in this direction. Also, long ago I unlocked some functionnalities (i.e. expanded reception coverage) using "software method" (using keypad) but I can't remember how to redo it again.

Does anyone know these and other undocumented features for this model? Or a good ftp site / web where I could get this info or from where I could get to a place where related info can be found?

I would be really happy to get this info!

GPS uses a spread spectrum encoding. I doubt you'd be able to detect
anything with an audio detector.

>resistor and a 5 volt logic signal make a great FSK xmiter.

When you factor in the cost of manhours expended to approach the
60 WPM rates of even low performance FSK, the balance tips very
far away from manual operation. And under the harsher conditions,
there are digital techniques that work where no amount of manual
training can do the job.

OOK Morse's primary attribute is the huge sunk cost of existing
operator training. Whether this sunk cost should be discounted
is the primary criteria for determining if further expenditures
of training costs for OOK Morse are merited. If growth rates are
expected to be small, and turnover slight, then it may be cost
effective to continue the high training costs of bringing new
operators to competence in OOK Morse. But if growth rates are
expected to be high, and/or amateurs desire to increase their
communications capabilities, then writing off the sunk costs is
merited.

The commercial and military realms have looked at the tradeoffs
and decided to discount the sunk costs and move to better methods.
Amateurs, to date, appear to want to protect the sunk costs at
the expense of continuing poorer performance and of high entry
costs for new operators.

GF> At Rocky Point, L.I., N.Y. one LF antenna was several hundred feet
>high and about seven miles long. It was used by the transatlantic
>telephone circuit of AT&T.

This is absolutely amazing. Thank you for this story. Could you imagine trying to deploy something like this in this day and age? Ha! A seven mile antenna, several hundred feet high, and 205kw! Man, the phone company can't even get a cell site into my town because of the "nimby"s, and they even agreed to make it consist of 3 functional flagpole towers to lessen the impact. All the screaming about "RF caused cancer" and "it's ugly".

That installation you referred too probably didn't look to much different than a power line. Just wires on 200 foot towers across the landscape.

When did these sites come down? Any idea?

NATIONWIDE 2 METER METEOR SHOWER TEST 11-15 AUGUST

The August QST Packet Perspective column by Stan Horzepa pondered
a plan to test 2 meteor scatter. LETS DO IT! Amateurs Nationwide
are hereby encouraged to participate in the Persieds Meteor
Shower which will peak on 13 Aug. Although 6 meters is far better
than 2 meters for meteor scatter work, everyone has a 2 meter radio and
we can make up in numbers what is lacking in performance. All
you need is a TNC, and preferably high power and a beam. The objective is
to see how many grid square (DX) packets you receive over the 4 day event.

Here is the plan: Stations in the four quadrants of the country will
alternately transmit for 15 seconds. Stations will transmit the
shortest possible meaningful packet formed by placing their 6 digit
gridsquare in the UNPROTO TO callsign field. eg, W3ADO>FM18SX: The
suggested frequency is the ARRL experimental packet frequency of 145.79.
BE SURE THIS FREQUENCY IS NOT OTHERWISE ASSIGNED IN YOUR AREA. EVEN so,
you can still monitor!

STEP-BY-STEP SET UP PROCEDURES:

1) Point your beam towards a major population area about 500 to 1000 miles
away in one of the three other USA quadrants. If there is another 2m
local station, coordinate your beam headings so that you are not both
hitting the same azimuth and receiver target area.
2) Enter your grid square into your TNC using the following command:
cmd: UNPROTO FM18SX
(If you cannot estimate the last 2 digits, use AA)
Notice that there is NO VIA DIGIPEATER used!
3) ATTENDED OPERATION: Enter the converse mode (cmd: CONV) and
then each time you hit your carriage return key, you will send a packet.
Hit 20 CR's and you will send a bundle of 20 grid square packets.
Synchronize your clock with WWV and transmit as many CR's you can in
the following schedule:
North East stations transmit between 00 to 14 seconds
South East ... 15 to 29 seconds
South West ... 30 to 44 seconds
North West ... 45 to 59 seconds

4) UNATTENDED OPERATION: This will probably be the most successful:
a) Set your BEACON TEXT to ^HP where H and P are single characters:
H is beam heading divided by 10 and expressed by the digits 0 to 9
and then A through Z. 9=90, A=100, B=110, C=120... Z=350
P is the square root of your power %10. 1=10, 2=40, 3=90... 9=810
b) Set your BEACON to EVERY 1. This is not in accordance with the
scheduled 15 second cycle, but it is better than nothing if you are

operating un-attended.

5) Alternatively, run the APRS program version 71b or later, which has an automated mode for Meteor Scatter and will plot all received packets on the map. Also, in many areas, 145.79 is already being used for APRS. Read the APRS METEOR.txt file.

EXPECTATIONS: Meteor scatter paths are VERY specific between the transmitter and the receiver, typically any single event will only be heard by receivers within about a 20 mile footprint. This is why everyone can transmit at the same time in the same area, preferably pointing their beams in slightly different directions. As long as there is about 50 miles between identical TRANSMITTING stations, their signals will NOT probably hit the same receivers at the same times.

W0RPK and K1HTV did make a successful 2 meter packet contact in 1984 over about a 1000 mile path, but it took 2.5 hours of constant packets. Hopefully by having hundreds of transmitters, and hundreds of receivers, we can improve the statistics. The best time for meteors is in the early mornings from 0400 to 0800 LOCAL time. But it is not much worse the rest of the day...

REPORTS: Since you will possibly see packets that no one else will see, send all gridsquare reports (Only those known to be greater than 250 miles distant) to me and I will compile the data. Be SURE to include your gridsquare!

Bob Bruninga, WB4APR @ KA3RFE.MD or
bruninga@greatlakes.nadn.navy.mil (preferred)

P.S. The Naval Academy 40 foot dish (Annapolis MD) will beam towards Florida on the 11th, Atlanta on the 12th, the midwest on the 13th. Donno about the final 2 days yet. Expected ranges are only about 550 miles, though, because the elevation cannot get down below 10 degrees. The range to Atlanta and Indianapolis are about perfect for that...

More specifically, it originated, as I recall, as a small group of hams in CA 20 or 30 years ago, as a means of keeping the band in use during periods of poor propagation. In part, this is to ensure that the FCC does not decide to take the band away from hams due to lack of use. Each active chapter typically conducts a weekly net for the purpose of exchangin numbers, since more numbers = more awards. The chapters are all theme-oriented, and some of the themes are pretty silly, but so what? The chapters do indeed keep the band busy.

SB PROP @ ARL $ARLP032
ARLP032 Propagation de KT7H

ZCZC AP01
QST de W1AW
Propagation Forecast Bulletin 32 ARLP032
From Tad Cook, KT7H
Seattle, WA July 28, 1995
To all radio amateurs

SB PROP ARL ARLP032
ARLP032 Propagation de KT7H

Solar activity was down by a few points last week, with several days of spotless Sun. The sunspot number was zero on July 23, 24 and 25, and solar flux was just below 70 all week. The most unsettled period was July 24, when the Boulder A index was 19, the Planetary A index 28, and the highest K index was 5.

Solar flux is expected to stay fairly flat, but rise slowly toward a broad peak around 85 from August 4 through 6. Flux levels should be back to current values after mid-August. A recurring coronal hole should bring stormy conditions around August 13.

Sunspot Numbers for July 20 through July 26 were 43, 26, 15, 0, 0, 0 and 11, with a mean of 13.6. 10.7 cm flux was 69.7, 68.5, 68.8, 68.5, 69.3, 69.7 and 69.4, with a mean of 69.1.

Path projection for this week is to Cocos-Keeling Island from Southern California, Texas and Illinois.

For California, 80 meters should be open around 1200z and 40 meters from 1100 to 1330. Check 30 meters from 1030 to 1430 and 20 meters around 0830 to 0930 and again from 1400 to 1700.

For Texas, check 30 meters from 1100 to 1230z, 20 meters from 1230 to 1430.

For Illinois, check 20 meters around 1300 to 1500z.

: gregory brown (gbrown@unlinfo.unl.edu) wrote:
: Technical superiority? Nah. Current communications superiority? Yup.

: jcumming@dgim.doc.ca (Jim Cummings) writes...
: Therefore, those claiming that CW is technically superior to digital
: communications are petulant, if not ignorant.

: Nobody is claiming CW is technically superior.

On the contrary, that is often claimed by those who are pro-CW. Just
re-read the above quote from Brown.

: We're trying to get the point
: across that for communicating with the majority of real HF stations, that exist
: and are operating NOW, CW beats the only other mode available to the majority
: of real HF stations.

It is a rather trivial to say if I only have CW and SSB, that CW is the
superior mode. If that is your only criteria with what one has at hand,
there is no arguement. However, that has not been the thread of these
discussions. The thread has been an discussion of the superiority of one
mode over the other. The fact that you or I or anyone else does not have
the capability to use that mode is irrelevant to the discussion.
However, if I argue the point the digital modes are superior, and you
argue otherwise because you do not have that equipment, your credibility
is in question.

: The fancy digital mode mentioned in the referenced article is nice, and I don't
: doubt its conclusions whatsoever. But if you'd like to make real contacts with
: real stations, 99.9% of whom don't run that fancy digital mode, you have two
: modes to choose from: SSB and CW.

Again, you are bringing in factors to the discussion that are hardly relevant. Indeed, if I have Amtor capabilities, and you do not, then we will be unable to communciate in that mode. Although you may believe that CW is superior, because you have no experience with digital modes, you are entitled to your beliefs, but your beliefs have little bearing which mode is superior.

: >Insert comments about quaint, backward, antiquated hams holding up progress
: here<

I can't be bothered. If the pro-CW crowd has quaint, backward, and antiquated ideas, they are welcomed to them. It matters nothing to me if they have those beliefs. However, I am entitled to argue that their beliefs are no longer justified. If they insist on continuing with their beliefs, again, they are perfectly entitled to do so.

: Maybe I'm breaking some big news here, but this is a *hobby* to a great many of
: us. We don't have thousands of dollars to throw at it just because someone
: invents a new mode and thinks we should all use it too. Some folks at some
: places in the world couldn't get the stuff if they had the money and wanted to
: spend it. Some folks just plain aren't interested in having their computer talk
: to someone else's computer, while both operators are out painting the house.

Again, the economic argument is irrelevant to the issue at hand.

: >Insert comments about commercial communications leaving us in the dust and
: taking away our spectrum here<

Why? How is that relevant?

: -Tom R. N1OOQ randolph@est.enet.dec.com

>suited to my purpose than GPS.

I disagree with your assesment. Number 1, Loran is not significantly
cheaper than GPS. You can pick up a GPS for as low as $300. The lowest cost
Loran is around $200. Number 2, I have not seen a battery operated Loran.
Yes they operate on 13.8 v. but their current drain is probably too high.
Number 3, US Coast Guard is dropping off Loran service in not too distant
future. Number 4, Loran does not have the coverage GPS has. Number 5, how
did you determine Loran has better accuracy?

You can buy GPS receivers alone and program the logic yourself, several
manufacturers even make models that you can slide into a computer slot.

Good luck anyway.....

I just unstalled a couple of Larsen roof mounts on my new truck. To my dismay, they no longer include a large rubber washer to seal the gap between the bottom of the antenna and the roof of the vehicle.

I suppose that this might not _really_ be needed, but I find the gap left exposed disturbing. Tried several hardware stores, and an auto parts store, looking for a rubber washer, and they looked at me like I was from Mars (and I don't mean MARS).

Any ideas on where to get a ~1" inner diameter rubber washer?

Thanks.

: Payload weight : 5-pounds
: Balloon : TOTEX TA-1200
: Helium : 180 cu ft
: Ascent rate : 750 fpm
: Max altitude : 110,000ft
: Max radio range: 470sm

FREQUENCIES AND MODES

: Packet Radio Downlink 441.0 MHz 2W
: Retransmitted from ground into APRS net on
145.79 MHz and on 14.105 MHz LSB
: Standard AX.25 1200BPS AFSK FM
: Sending APRS-compatible NMEA-183 GPS navigation data
: No Open digipeating. No receiver. Don't try.

: Altitude, Inside & Outside Temperature telemetry on:
146.575 MHz , 28.322 MHz , & 438.5 MHz (wide band TV
audio)

**** : Charts for decoding of C.W. telemetry may be
found on WorldWide Web at address
http://www.mindspring.com/~rwf

*** : ATV camera (B&W) with 1 watt AM transmitter on 434.0 MHz

: All antennas vertically polarized

EXPERIMENTS : More experiments in BASIC stamp control of balloon payloads.
Stamp controlled servo/mirror for multiple
camera views, 12 bit altimetry and 2,

8 bit temp probes.

Possible HF net on 3.780MHz before and during mission. Still do not have a Net Control. Anyone wanna come do it?

For more details about this project, see the WWW address:

http://www.mindspring.com/~rwf

Something else, you might try is common easy-off oven cleaner. It is common sodium hydroxide, lye. Be cautioned, that the chemical is extremely caustic. It will "eat" aluminum, so use it sparingly, and flush with water often. Another chemical on the market, probably safer to use is "aluminum navel jelly", made by duro, the owner of loctite. Another cleaner is "mag wheel cleaner", available in auto supply stores. It contains phosphoric acid. Again, use it with caution. Flush with water often.

There are tapping compounds for threading aluminum, such as "tapmatic", available in tool shops and your better hardware stores. I don't think it will help in taking the equipment appart though.

Hope this helps -
jrh

> variable. They can be made to be normally open or normally closed.

An earlier suggestion towards Grainger Supply Co. should work- about 1-1/2 years ago they had 110F-on switches (95 or so off on downward swing) for around $7. They were the standard 1" or so package, and rated for 110VAC or more- but worked equally well for a portable project with a 12vdc fan.

A local heating supply store in my area *does* sell variable temp units that cover a closed circuit when temp rises to 90 to 120 (adjustable via knob) and turn off when temp drops about 20F below the on temp. Only problem: somebody last month went after one to find they had increased from $11 to $18 apiece ---Ouch! But they do work for repeaters quite well. Worst case, I can give you their phone # address if Grainger or Newarks doesn't stock any variable temp units, or worse yet they want more than $18. (God forbid!!)

You might also want to consider Morse Academy, downloadable from the ARRL
board as well as CompuServe, which IS freeware. Some Tech Plus friends of
mine who currently are struggling with 13 wpm (and will probably make it
soon since they are on HF almost daily) say that the CW put out by MA
sounds more like what is on the actual exams than does SuperMorse.

Not only have you not heard that adage, Jim, you apparently don't even understand it. And since you were replying to my comments, I assumed your reply would be relevant. I was not refering to the "technical superiority" of CW (Thank goodness...I'd hate to be petulant and ignorant!) I even accepted that it is not ("Technical superiority? Nah). My "adage" simply pointed out that if your intent is to actually communicate with other amateurs, it is wise (superior?) to use a mode other amateurs use. You may choose to hone the cutting edge of technology (that is admirable), but others may choose to optimize their ability to communicate with as large a cross-section of hams as possible. And it is as much in the interest of amateur radio to encourage this ability as it is to encourage technical development.

> a machine.

The way the game is played today, I'd agree. But the way the game is played is *because* of the modes used. That is to say, with non-protocol modes. A machine system designed to work DX would use a sequencing contention protocol. There's more to digital operations than just the encoding. Even the poorest contention protocol, the pure Aloha system, can achieve 18% of a channel's theoretical information capacity. That's slightly better than typical pileup behavior. But there are much better contention protocols. Proper systems can achieve 90% of channel capacity. That essentially means no pileups thanks to protocol management of the channel. This is somewhat, but only somewhat, akin to using a list to work DX rather than using pure contention in a pileup. The difference being that the management is inherent in the protocol while lists only work when amateurs exercise self-discipline in cooperating with the management procedures.

>So here is a syllogism:
> (1) the brain is better than most other systems in using context
> and other message characteristics to better decode the message.
> The exceptions today would be the system used by JPL to decode
> voyager messages and the system used by a ham to decode faint satellite
> messages as reported in the QEX. However these were NOT real time.

Real time methods, or methods that lag real time by an imperceptible amount, are available for processing signals of Voyager grade. The original Voyager processing system, and the one outlined in QEX, used non-realtime methods simply to allow general purpose computers to handle the data, however there now exists specialized hardware that can perform the task in realtime, and it isn't very expensive. This shouldn't really be a surprise, considering the progress in ASIC

VLSI in the last 25 years. Trellis coding, one level used by Voyager, is now so commonplace that modems of V32 and above routinely embed it in ASIC hardware.

However, Voyager represents extreme weak signal work and is different from most Dxing. Most Dx signals are not that weak, and are very stylized. Machines are very good at matching stylized patterns, IE that's what an ethernet card does when it picks a packet with its address in the header out of the contending 10 MIPs data stream on the cable. Now there's a pileup. :-)

Humans can still, at this time, discover arbitrary patterns in sequences with no a priori knowledge of the pattern content, IE pick out shapes in the patterns of clouds, better than machines, but machines are already much better than humans at discovering a known pattern against a noisy contending background. Alphabetic encodings consist of known patterns.

> (2) CW gets the human brain invoved in decoding at a fairly elemental
> level (unless you try decoding RTTY by sound - not hard but
> hardly worth the effort)

That's both true and false. CW gets the brain involved at the symbol level, which is one reason CW performance is so slow, but it doesn't get involved at the RF phase level, which is one reason that it can't pull the really weak signals out of the noise. I do know a few people who claim they can copy RTTY by ear, even I can recognize some character sequences by ear, but none who can deal with QPSK or a trellis coded data stream. Yet it is the latter that allows superior performance.

>If you agree with (1) and (2) then the superiority of CW for dxing should
>be obvious. Add to this the easy availability of equipment to get
>the brain involved and the conclusion that CW is better seem to be a
>no-brainer. (sorry, could not resist.)

I don't agree with (1) or (2), and equipment complexity has become a virtually moot point in the last 25 years. Virtually every DXpedition lugs along very complex manufactured radio equipment, bulky and power hungry linear amplifiers, and large antennas. The performance of all that can be easily eclipsed by a modest radio and simple antenna used with a purpose designed digital subsystem. The coding gain achieved, typically 20-30 dB, by proper digital systems more than overcomes the advantage of the linears and beams typically used.

A good illustration of the digital advantage can be seen in TVRO applications. Contrast the 3 meter dish needed for conventional TVRO to the 18 inch dish needed for Direct-TV. The difference is in the modulation encoding. That the equipment needed for the latter is more modest in size and cost is a happy side effect.

We have yet to see appliances sold to amateurs in large numbers that use superior digital encodings. That isn't because of lack of availability of the technology, or because of excessive costs, rather it is because amateurs have not demanded better than SSB/CW

equipment. If you look at the advertisements for the latest gear from manufacturers catering to HF DXers, you'll see the greatest stress placed on CW performance. Now that's *not* because CW is a better mode, it's simply because that's what amateur DXers demand. I contend that that demand comes at least in part due to the very widespread, and false, belief that CW "gets through when nothing else will". Clearly that is not true when you open your eyes to the technologies available around you. It's only trivially true in amateur radio because we've turned our backs on everything better, and embraced one other technology that is worse, IE analog voice. It's rather easy to beat a one-legged man in an ass kicking contest after all.

>There is some experimental evidence to this regard. Every year, the
>Kansas City contest club runs a contest at Dayton where they play
>a tape with lots of stations calling in CW simultaneously. The highest
>number of call recoginized by the top human operator (G3SXW?) in real
>time far exceeded the number copied by using advanced DSP techniques done
>later and not in real time.

This is unsurprising. Run the contest again using protocols and encodings optimized for machine reception and see what result you get. It is the encoding and protocol that make the performance difference, not the fact that machines or humans are doing the decoding. It just so happens that the best encodings and protocols are ill suited to direct human reception, while being nearly ideal from a machine perspective, that causes us to adopt machines. It's the same thing that has cars use wheels instead of legs. Wheels work better, but humans and horses don't have wheels, so they ride in cars or trucks when they need to go fast or far. The same is true with digital encodings over radio, they simply work better when you want to communicate quickly or over long distances.

Now some exceptional marathon runners can cover 26 miles in under 2.5 hours, but I can cover the same distance in my truck in under 20 minutes, and carry a thousand pounds of "information" in the process. The machine amplifies unaided human capabilities. Running the marathon is considered sport while driving the truck is considered mere utility, but objective consideration shows that marathons are only sport because they voluntarily restrict themselves to using less than the best methods of covering the distance. It may indeed be that DXing would no longer be a sport if better communications methods were used, IE shooting fish in a barrel is typically not considered a sport. But there can be no doubt which methods are objectively superior for the task.

Traditionally, Dxing, like auto racing, has claimed to "improve the breed" by developing and spreading better methods of communications. We often see claims that DXing has led to better equipment, and better operator skills. But when we clamp restrictor plates on our engine intakes, or restrict ourselves to less than the best modulation encodings,

we are no longer improving the breed, we're just playing a game. We can't point to gaming results to determine what the best methods are when the game doesn't use the best methods.

Conway-- You state the obvious but not the relevant.

Of course one should know the material. Of course the test should be a measure of knowledge, not just memorization. I don't dispute these facts.

However, if the question pool is published, doesn't one have the right to purchase an up-to-date book that contains these questions? To hell with the questions, doesn't one have the right to purchase the most up-to-date book they can?

Since RS takes it upon themselves to stock these books, they should make sure they have the most up-to-date stock they can have, especially if it is represented to be so. I'm sure the ARRL will give credit for out of date stock.

I believe, like someone else pointed out, that it is probably sheer ignorance on the part of RS that they don't have the most up-to-date material and they don't inform their customers that the materials are out of date.

BTW, Conway... I trust this was in terms that *you* could understand.

I am looking for a service manual for a high pwr UHF Motorola Mitrek. The unit is presently on 463.300 MHz, if this helps.

Yes I already know I can get anything for this radio from Motorola, so please don't send me their 800 number--I have it. A used book from someone out here would be sufficient.

Also can someone direct me to where I can find the mods for full duplex operation for the Mitrek? Nothing seems to be on the Oakland FTP site or a few other sites.

Any help finding these two items is greatly appreciated.

: JC>: best... he he!

: JC>On the other hand, in the same issue of that magazine was a review of the
: JC>HAL P38 board which plugs into a PC and gives the user Baudot, Amtor,
: JC>Pactor and Clover capabilities. The reviewer was an ARRL Staffer. I
: JC>can't quote the statement exactly, but the reviewer stated that the board
: JC>was copying Baudot signals that he could not even hear! So much for CW
: JC>being in the forefront....

: You are comparing apples and oranges again Jim. As I said, the
: researches CHOSE to use morse coded CW.

Whether it was a conscious decision or the only means to accomplish their experiment is irrelevant. What is indeed the issue is the inference that CW component in a state of the art technology and because of its use, Carling concluded that it is superior to digital modes. Since the experiment did not have a digital component, Carling's conclusion is not supported.

The review of the P38 board was anecdotal proof (in support to the mathematical proofs) that Carling's conclusion, as well as that the commonly held belief that "CW will get through when no other mode will get through" have been eclipsed by technology. Thus the comparison was not one of apples and oranges - but further proof of the superiority of digital modes over that of CW. In fact, there would be every reason to believe that digital modes had been use, the distance between the reciever and the transmitter would likely have been greater than what would have been measured using CW.

: JC>As the old adage goes - you can't work them if you can't hear them...

: Maybe it should be: "If you can't hear them, you can work them!"

Perhaps Carling's suggested modification to the adage has merit. Spread Spectrum technologies are good examples.

: Although the same was true with the old Robot 800 on RTTY.
: And that was decades ago!

Perhaps, but I rather doubt it. The technology at that time was in its infancy and not likely to produce the results that we are priviledged to use today.

: 73 & live better with AM, CW, and if you HAVE to use it; SSB!

: p.s. Jim, "Old adage" is bad grammar. It's just "adage!"

AES and other poorly staffed ham stores, please take notice: this is
the way people want to be treated and this is how you will increase
your business!

Hams please take note: give your business to stores that work for your
business and earn your business. Stop giving business to lazy people
that just sit around waiting for the phone to ring.

Todd Little (little@pecan.enet.dec.com) wrote:
: Those codes ensure the safety based upon sound
: engineering practices as opposed to aesthetically motivated nonsense.

Since you believe that aesthetics are nonsense, I hereby sentence you
to either (a) building a new house next door to a waste transfer station,
(b) watching Madonna videos continuously for the next year or
(c) eating at a McDonalds for the rest of your life.

In the final analysis, it is aesthetics which determine the quality of
our lives. The dispute you have with your neighbors seems to be that
you find a tower to be a thing of beauty (as do I) while your neigh-
bors (or at least the local homeowner's association) do not. If you
think that these restrictions are onerous, I'm sure that you would
fight for my right to buy the house next door to yours to change it
into a mini-toxic waste disposal site. I'd be sure to follow all of
the OSHA/EPA regs! After all, "Those codes ensure the safety based
upon sound engineering practices as opposed to aesthetically moti-
vated nonsense."

Aesthetics are NOT nonsense. The aesthetic sensibility is probably the
only thing that is uniquely human. In denying aesthetics, you are denying
your own humanity. Go back to the jungle and live with your ape cousins,
Monkey-Boy - they won't care if you build a tower.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur

Hi,

A pet project that I have at the back of my mind needs a cheap positioning system, and I am looking at Loran-C as being much better suited to my purpose than GPS.

Why ? Because it is cheaper, has adequate accuracy, uses 100kHz technology that is much easier with antennas (I dont need care to point something up etc.)

I am looking for a bare-bones Loran-C reciever -- all I need is for the reciever to give me TSD or even mere signals for pulses ... I can take it from there and have my software do all the math.

And I want it to be small, as small as possible ... I will be wearing it on my hip all day (with my hp100lx) ! (Coming to think of that, maybe I should talk to some vendors who make migratory animal tracking gizmos that use Loran-C ... would be grateful for any phone numbers here!)

Any Loran vendors I would benefit talking to ? I would be grateful for any phone numbers.
Any tips ? Thanx in advance.
Any other ideas .. suggestions however bizzare ?

TiA !

PS: I was first toying with an idea of grabbing cellular base station id's off the air, and using look-up tables to map the base I am in the service area of to geographical location. But dropped that idea since cellular phone units are not _that_ cheap, and are very hard to hack through to get such info as base-stn id from under layers of AMPS protocol, even if available etc, and even then I would need to update base stn location maps often. -- not practical.

I see you didn't read the review. The card will run in the oldest most decrepit PC XT extant. If you can't scrounge one of those out of a dumpster, then you can certainly buy one for less than $50 at the next swapmeet. I got 4 for $50 at the last swapmeet (I thought I was offering $50 for one, but the guy thought I was making an offer for all). The economic argument won't wash, not with the majority of amateurs using multi-kilobuck Japanese radios to beep at each other. If you're worried about someone having to live with second hand or homebrew equipment, consider that digital equipment also comes second hand, and also can be homebrewed.

>If not, well you're a
>backward, paranoid, protectionist, wetware-conditioning damaged, hazing
>traumatized, game playing emitter of beeps,

Likely true. :-)

>who we'll just encroach our digital
>signals upon, since your chunk of the band is wasted anyway.

Hey, you OOK Morse guys are always claiming CW gets through when nothing else will, we're just giving you an opportunity to prove it. <sarcasm> Actually, digital operations pretty much stay out of the low end of the bands where you Morse experts have exclusive run. It's us chirpers who are caught between Donald Duck quacking on one side and Roadrunner beeping on the other.

>You bought your HF
>rig used for $200, and can't afford all this, you say? Too bad, maybe you
>should take up knitting if you can't play hardball with the big boys.

><for the overly literal-minded: this is sarcasm>

What, your spark coil burned out? Well too bad, guess you can't play hardball with the big boys using those newfangled tubes anymore. Actually you can still play hardball, but the seasons have turned and some of us want to play football now. Unless you're Deion Sanders, your baseball skills may not be very relevant anymore. You might, like Michael Jordan, get sent down to the minors. I guess you want progress to stop so you won't have to learn new things and adopt new methods to stay on top of the heap, but unfortunately for you, it doesn't always work that way (except in the paradigm of certain current amateurs). In the Navy there's a saying, "if it moves, salute it, if it doesn't move, paint it", I guess you're going to get painted. :-)

Look, you want to use OOK Morse? Go ahead, nobody is stopping you. You pay the penalty in poor performance, you pay the penalty of high manhour training costs, you pay the penalty of low throughput and less than achievable weak signal performance. Your choice, no sweat. It's only when you insist everyone else must make the same choices you did that you have to defend the merits of the position. Not everyone is limited to a $200 equipment budget, not everyone has to exchange a meaningless (and usually untrue) 599 with some operator camping on a rock off the coast of Lower Slobovia for a post card, and not everyone wants to waste hundreds of manhours of training time on a mode that offers less return than some other modes in terms of communications throughput and effectiveness. You (King Morse) are not moving, and some of us aren't saluting anymore.

Note, once as a child I found Donald Duck charming, but his occasional temper tantrums were annoying. As an adolescent, I cheered for Wiley Coyote against Road Runner's infernal beeping. At least Wiley had *enterprise*. Now as I grow old, I find inoffensive little Jiminy Cricket the best friend of all. His soft chirps penetrate where no loud beeps or quacks can go. Joined by his growing host of friends, his music has become a symphony to those knowledgeable enough to listen.

>superiority? Yup.

It's a tautology that you can't work someone not operating your mode,
but the inverse is also true. I'm not losing any sleep over that, and
doubt any other digital operator is either. In the universe of possible
contacts, there is no shortage of those sharing a common mode. The early
SSB operators couldn't intercommunicate with envelope detector equipped
AM operators either, but eventually the superior mode became dominant
anyway.

1796. Re: Best frequencies for meteor scatter?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-28 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1995Jul28.161037.578@ke4zv.atl.ga.us>
Source record: 241568

In article <jos_beck.4.0015BAA8@euronet.nl> jos_beck@euronet.nl (Jos_Beck) writes:
>Can anyone tell me the best frequencies for meteor scatter communications.
>The frequencies listed do no necessarily have to be within the amateur bands.

The US government thinks VHF low band is ideal. The 6 meter amateur band is good, and 10 meters would be usable too, though ordinary E-skip would confuse matters there more often than on 6 meters. The higher the frequency you use, the denser the meteor trail has to be, IE the larger or faster the meteor has to be. Since there are a *lot* more small meteors than large ones, lower frequencies are preferred. OTOH, short trails won't support longer wavelengths well, and D layer absorption comes into play too, so there's a lower limit on practical use of meteor trails.

The US government operates systems for the hydrographic survey which run just below the amateur 6 meter band. The stations run from 10 to 100 watts, use 3 element yagi antennas, and, of course, digital coding. They operate in a master/slave relationship. The master pings continously looking for a meteor trail. When the slave hears a ping, it quickly dumps a packet of data back to the master before the meteor trail dissipates. This continues until the traffic is passed. If there is traffic bound the other way, the station pair reverse the roles of master and slave and operate as above. (The field stations are typically solar powered and normally act as slaves. The master stations are typically running on mains power and can afford to operate for long periods in the high duty cycle pinging role.)

This operation is most efficient if done duplex, with the master's pings and ACKs on one frequency and the slave's packets on another nearby frequency. High gain antennas are a no-no since a meteor can occur anywhere in the common volume shared by the beams of the two stations. A 3-element yagi with a 60 degree beamwidth appears to be the best compromise. Some elevation above the horizon is desired on all but the longest paths. Not a lot of power is required because when a meteor trail is present the reflection is strong, and when it is absent the scatter signal is too weak to be detected anyway.

There are several ways for an amateur to try this sort of operation. The crudest way would be with AX25 TNCs, conpermed and set to retry forever with no backoff. This isn't very efficient, and sending blind data packets almost guarantees that most of them will be received starting in the middle when a meteor trail does occur, and would thus be discarded. You really don't want to waste power or spectrum blind sending data.

A better way would be to implement the above protocol of master/slave pinging and data transmission on your PC and send via a KISS TNC in UI frames. To take maximum advantage of the trails, the slave station should use the highest baud possible, and send several frames at once when a ping is received. The usable length of the trail is in the 1 to 10 second range with occasional trails lasting up to 100 seconds. Use of FEC is probably not warranted since the signals are usually solid or gone completely.

A third method that may be usable is to have a second receiver at the slave site monitoring a station in the fixed service near the master station in location and frequency. When its carrier is detected, the slave can transmit frames and listen for ACKs from the master station with its main receiver. This relieves the necessity of the master station operating in continous ping mode, thus causing interference to others on the amateur band. In the US, TV channel 2 is a good candidate for the fixed service station in some locations.

I've just bought a 95 Toyota Corolla. I had read before about two-way radios causing problems in new cars due to RF affecting electronic systems. Also, my owners manual says to contact Toyota before installing a two-way radio.

I was just wondering if anyone already had any experience with ham rigs in these cars, or any recent Toyotas. Right now I only have my 2m HT with a mag mount antenna, and I can't imagine 6 watts doing much interfering... But what about later, if I get a more powerful radio...

What kinds of things do I need to be careful about? I could do without an airbag in my face just because I keyed up...

Thanks.

Daniel Ratzlaff

You folks have been at this argument for months now. Don't you have anything better to do? It's getting pretty boring.

I assume you got ham licenses so you could get on the air. So GET ON THE AIR...whatever your favorite mode happens to be ... and use it!

I know Internet is fun, and it's useful, but it's not ham radio. It's just a supplement. Spend all the time you've spent arguing ON THE AIR!

I still need 38 states on RS-12 (hint hint!)

73, Zack W9SZ

1800. Announcement: ftp site for AZPROJ

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-28 00:00:00 UTC
From: mack@ncifcrf.gov
Message-ID: <DCFszC.8Gs@ncifcrf.gov>
Source record: 241572

Announcement: AZPROJ10.zip (approx 920kb) is available on

nic.funet.fi/pub/ham/antennas
and
oak.oakland.edu/pub/hamradio/pc/ham-utils

Azproj v1.0 is a collection of postscript files and data files
for generating azimuthal equidistance projections of the earth
from (almost) any point on earth. It can plot color maps of the
surface of the earth on any scale, draw and/or label grid squares,
show worked grid squares on a band(s) of your choice, dxcc
countries (and countries worked an a particular mode, eg CW/SSB),
mountain tops, rovers, repeaters, beacons and can use NMEA input
from a GPS receiver to center the map.

Azproj can be run on ANY computer (Mac, PC/DOS/Win/DVX, Unix)
and output to a postscript device (printer, ghostscript runing on a
unix or DOS machine with a ghostscript compatible printer, eg
HPcolor inkjets). Ghostscript will also allow display of the
maps on screens.

Although a rudimentary understanding of postscript will
help in running azproj, sample .bat files are supplied to make
initial maps and it should be possible to make simple changes to
the az_ini.ps and *.bat files to get the maps you want.

To display the maps on a screen or to use a
non-postscript printer, you should first obtain ghostscript
(available for PC (DOS, Win, DesqViewX) or Unix) from your
favorite ftp site (try ftp.cs.wisc.edu/pub/ghost)

The azproj files are GNU copylefted.

: >: Scarcity and the power of the human brain. I think that the above discussion
: >: fails to take into account the scarcity of the country of the DX station.
: >: After a hiatus of many years a station from Libya, 5A1A, has
: >: been on the air recently. The station has been called incessantly by
: >: stations world wide and yet the operator succeeds in making
: >: about 100 qsos an hour or more on a regular basis. I think
: >: that it is the intelligent processing by the brain that makes this possible.
: >: I fear that under adverse conditions such as the ones under which
: >: Toly, the operator at 5A1A works, it would be well nigh impossible for
: >: a machine.

: >The scarcity arguement is hardly credible particularly in the case of
: >Lybia. In fact, when it is the only mode available, due to licence
: >conditions by the responsible administration, it is disengenuous to argue
: >the CW is superior.

: This is not correct. Station 5A1A worked SSB worldwide including in US.
: It is true that they worked stateside stations more on CW.

But what does that prove? Other than they worked a lot of stations on
CW! However, if your point is that while using CW you can work more
stations so that they can collect QSL cards, so be it. But how does that
prove that it is a superior mode?

: >With respect to the QSO rate, given the same training and skill and
: >experience, 100 QSOs/hour in digital modes is a rather easy goal to
: >achieve.

: Let me be clearer. It is not the rate per se that was impressive.
: Maintaining that rate with enormous QRM is.

Yes, the human brain is a wonderful device.

: I am sorry that you missed the whole thrust of my post. The very
: first sentence (re-quoted below):

: >: I think that there is more to suitability of CW for DXing than merely
: >: copying weak signals.

: I was focussing in on the ability of the brain to copy signals that
: has significant QRM and not just the weak signal copying ability.
: This situation is not just lower signal to noise ration as the noise in the
: case of QRM looks similar to the signal in more ways than white noise
: does. It is harder to discriminate signal from QRM than from QRN
: and so the processing benefits more from getting a human with extensive
: domain knowledge involvede earlier in the decoding process.

Balderdash. Interference is interference, regardless of its source. It
is not hard to see that there would be the opposite effects under other
conditions.

: Now switching to your focus on weak signal copy:

: If we just want to talk about the weak signal copy then consider
: the following: Use the machine to discern the weak signal and still
: involve the brain in decoding where it can use its superior domain
: knowledge to extract the message. I am willing to bet that this would
: be better than just using the machine itself.

Don't bet your mortgage or you will be out in the street quickly.

: >: (2) CW gets the human brain invoved in decoding at a fairly elemental
: >: level (unless you try decoding RTTY by sound - not hard but
: >: hardly worth the effort)

: >Granted, CW is a simple mode whereby minimal equipment is required. But
: >considering its ineffeciencies, this supposed factor in favour of this
: >mode is continually diminished as technology develops.

: It is not the equipment simplicity as much as getting a better computing
: engine (the brain) involved earlier in the process before information is
: lost in the decoding process.

Err.... what is your point? At what point is the information lost?

But I believe that you are trying to say the the human brain is superior
in decoding abilities than machine capabilities. If my interpretation of
your point is correct, the evidence speaks for itself - it is not so.

: The CW mode allows this to occur.

Again, since you presumption is false, your conclusion follows to be false.

: Let me address the remark about HAL P38 about decoding messages that
: we cannot hear. We cannot hear the radio waves directly either. We
: have to use receivers to do that. If we really want to compare apples
: to apples, how about a receiver with a filter and discriminator like the
: ones in P38 but for CW, regenrate a tone and let the brain decode the CW.
: Don't you think that this combo do better at CW than the P38 at RTTY?

No. The author of the review stated that the P38 board had processed,
detected and decoded these signals and printed them on his screen. Yet,

he himself could not hear those same RTTY signals after the same processing and detecting. Since the P38 could decode RTTY signals that could not be heard by the human ear, it follows that Morse code signals would not be decoded because indeed the human ear would just hear noise.

Besides, there are others who participate in this newsgroup who can demonstrate the mathematical superiorities of digital communciations over CW, aside from the evidentiary superiority.

: >: If you agree with (1) and (2) then the superiority of CW for dxing should
: >: be obvious. Add to this the easy availability of equipment to get
: >: the brain involved and the conclusion that CW is better seem to be a
: >: no-brainer. (sorry, could not resist.)

: >Well, since your premises were false, so goes the conclusion.

: I disagree. Please see above.

The evidence is there that refutes your hypothesis. If you wish to refuse to acknowledge that evidence, you are certainly welcome to your views.

: >73 and live better digitally

: Enjoy. It is a big hobby and we can all have fun.

: Regards,

: The issue that I wanted to point out that in order to live in areas that have
: populations in the millions we MUST be willing to compromise. Steve, what
: you seem to not realize is that ham radio is just that a hobby. I could see

Hey! Don't cuss like that ;-)

Seriously...yes it is a hobby...but it tends to be a dominating influence
on many of our lives. I know alot of folks that define themselves
interms of this hobby. Thus...many of the decisions about how we
live our lives and the compromises we make are influenced by it.
It aint just a hobby...it's a way of life ;-)

: a unbending non-compromising attitude if ham radio was money in the bank. It
: is not. What hams fail to understand is that when they are looking for a
: house, it is up to them to research what, if any CC&R's would effect them.
: If they found CC&R's to be more than what they could handle, then DON'T BUY
: THE HOUSE! Use your freedom of choice, and choose a neighborhood that will
: allow antennas and towers. Let others use their right to choose a
: neighborhood free of towers. The shoe is on both feet. This is hard to
: understand, I hope that I can express myself typing.

I don't have a problem with what you say up to this point.

: As much as you as a
: ham has a right to construct a tower and beam, your neighbors have the right
: not to have towers in the neighborhood.

I do have a problem with this. First...technically we don't have
a RIGHT as amateurs to put up towers(see Howard Vs. Burlingame for
a good discussion of this one.. ;-) On the other hand, we ARE
federally licensed. This, plus PRB-1 forces local government to give
us special consideration. As has also been stated many times, PRB-1, et al,
excludes CC&R's. So for the time being...it does indeed mean buyer
beware.

On the other hand, I tend to be one of those that thinks a person's house
is their castle. If I want to put up something on my roof(and it is legal
to do so...) then by-cracky...I'm gonna do it. I like keeping good
relations with my neighbors...but at the same time, I have my own
interests and pursuits...and that is a balancing act. So, assuming
I'm not physically hurting my neighbor(sans RFI issues ;-) then
I DO have the moral ability in my own mind to put up the tower
regardless of the neighbors' opinion of same.

: Now point two. Towers,
: trashy front yards, bad paint, junkers in the
: driveway, and just plain dirty neighborhoods. All of these effect property
: value, some more than others. Simple fact, and any real estate agent will
: tell you this.

Well, no this isn't a simple fact. I'll certainly go along with the
statement that unkempt, poorly maintained properties detract from the
value of a given house in a given neighborhood. I've personally been
out with a real-estate appraiser many hundreds of times...so I know this
is taken into consideration. I also know that real estate appraisers
don't take towers next door to a property into consideration when
determining the value of said property! So...if a real estate agent
told me that a tower does detract from the house value. I'd know said
real estate agent didn't know what they were talking about.

: Point three. Safty. I can provide pictures of towers and antennas that are
: falling down. I beleive that the city of Orange made someone clean up the
: roof, as parts of the antennas where falling onto the freeway. This ham more
: than likly NEVER did any periodic inspections on these antennas. CC is the
: most important thing that hams can do. As the posts above indicate, a short
: sighted pattern of thought can lead to disaster. Wind is not the only enemy
: to antennas. I will not go into detail about all of the bad things that can
: happen due to bad CC practice.

First. What does CC mean?

Secondly, I don't have any problems with safety requirements. None at all.
In fact, I think it is appropriate and proper for cities to have building
code requirements that force some level of safety to be considered when
puting up structures. On the other hand, I also think that this safety
review should be limited to the support structure, not the antenna that
goes on top of it. (There is the logical exception that the city should
require that during the active lifetime of the structure, that it's
design limits may not be exceeded) If I were in the act of putting
up a major tower, i.e. spending many thousands of dollars for same,
I don't want it to fall down either! I should also protect against
access to the structure by children, etc. These are all reasonable
concerns.

: I don't live there anymore, I live in a dorm at Edwards AFB in California. I
: can't have antennas, but I feed my ham radio habbit with lots of 1200 Mhz DX
: accross the desert. Thanks to everyone for expressing ideas, showing how
: diverse ham radio really is. Good job!

Well, the answer is... Yes. They are Ex (as in no longer) Felons.
A large percentage of people are not ex-felons only because they haven't
been apprehended yet.

If the person has done their time and is attempting to reassimilate back
into society, why would you want to stop them?

What if the question were, "Do you want to see convicted felons that are
currently serving time granted radio licenses?"

Hi out there.
I write for an online career and rec publication for kids. Currently,
I am researching a story on Ham radio operators.

What I need is for two or three veteran ham hobbyists to contact me
for an interview about what they like about this stuff, how they got
involved in it, etc.

I should say, I don't even really know what a ham radio is (as opposed
to a shortwave and so on). Nevertheless, I'm sure there's lots of
helpful folks out there reading this group who can steer me right.

If you'd like to share your experiences and stories as a radio operator with
all the kis who access our site, please contact me via e-mail so we
can set up a half-hour interview whenever it's convenient.

Thanks folks out there in rec.radio.amateur.misc.

>
>Snagged the following off of the broadcast group. Can someone
>confirm the frequencies - they seem *awfully* low. Jeff NH6IL

They are correct. ELF is used because it will penetrate to great depths in the ocean, and because it doesn't rely on the fickle ionosphere for worldwide coverage. The purpose of the system is to maintain positive control of nuclear submarines in a total war environment. This it does quite well. The suggestion to use blue-green lasers from orbit has two fatal flaws. First, the satellites are vulnerable to attack, and second the technique just doesn't work to the depth that ELF does, and it requires precise a priori position information to aim the laser, thus exposing the submarine to risk by requiring it to rise near the surface at known locations periodically in order to communicate. With ELF transmissions, no precise a priori location information is needed. Throughput of the system is low, but it is *very* robust.

This is an example of a system that is inaudible at the intended reception site due to the very low radiated power and the huge attenuation of the ocean, but perfectly copyable by machine due to the modulation encoding used.

>the need to do this and certainly prefer not to deal with such complication
>if it can be avoided.

Any realtor or seller that doesn't ensure you are aware of CC&Rs and
provide them to you is irresponsible. I was told of the CC&Rs on my
property and had to reveiw them. The seller's agent had me initial each of
all 30 pages of them. If there was anything I couldn't live with, I had
the right to call it off.

They are not a petty item. Sellers can be sued for not dislosing them.

A buyer that doesn't ask about them is ignorant. If the buyer's, or
potential buyer's agent doesn't get them, he is incompetent.

WA>Guten Tag.
WA> I'm off to Germany for some business and some fun, and I'd like to
WA>visit some radio stores, probably in the Frankfurt aM and Munich areas.

WA>Any suggestions???

There is Radio Drager in Stuttgart but their selection is rather
limited. That's the only place I've been to in DL.

I'm a RS employee, and the company sent out a memo in early July
telling all stores to mark out of stock the books as "beyond resonable
repair" and destroy them. If you are still finding them out there,
then those stores have lazy store managers! RS will have a new book
within the month (or so I've been told by the buyer).

Ben,

Remove the antenna from its roof mount and look closely at the
bottom of the antenna that screws onto the mount. You will
probably see that it has a rubber O-ring recessed in the bottom.
Many antenna manufacturers have replaced the large rubber gaskets
with o-rings that are just as effective and more asthetically
pleasing. You can get replacement o-rings at any auto parts
store.

If you don't feel comfortable with the protection of the original
design you can add some silicon sealer under the mount.

I am basically a cheap)*&% and I don't want to pay for a new radio to use with my PC for packet. So I would like to rig my system so I can connect to the KW 733 in the truck. I am also lazy, and don't want to take the radio out of the truck. My question is, how long can the cable be between the PC and the TNC? 50ft OK? How about between the TNC and the radio?

Any help would be appreciated...

If you are looking for a nice way to carry an HT while biking, skiing, etc. contact GALL'S at 800-477-7766. They sell a radio chest harness that will cary an HT and keep it vertical. The harness is made of Cordura and even has a pocket for pen and a cargo pocket.

GALL's sells mostly to the police/fire/EMT trade, but have a number of items of interest to hams, such as the check mount above, HT cases, mobile brackets, etc.

>something up etc.)

I think you'll find that GPS isn't that expensive anymore, with the tiny Garmin 45 going for $299 and the Magellan Explorer for $199 in the Gander Mtn catalog. Lorans are in the same price range, but I haven't seen any as small as either of these GPS receivers.

And as to antennas, you need a 60 inch FET matched and preamped whip worked against a good groundplane for Loran C while the GPS has a tiny quadrafilar helix that looks like a very short stubby duck sticking out of the receiver, or uses a tiny round patch antenna mounted flush in the case of the receiver.

Neither of these systems work very well indoors. At least with GPS, you have worldwide coverage. Loran C has only limited coverage areas. And Loran will be phased out in the next few years.

I have a King Marine Loran C unit, and an Icom GPS. The GPS loses lock less often, and naturally gives better absolute position fixes. Loran C is, however, more repeatable, IE it can return to a place it has been before more closely than the GPS even though it doesn't really know where that position is in absolute coordinates to great accuracy. Loran signals hug the contour of the Earth, so if you pass behind a large hill, it will think you are further away than you are because it is not measuring as the crow flies, rather as the snail crawls. This is a curse to absolute accuracy, but is a boon to relative accuracy.

: >How about another adage: "You can't work them if they don't operate
: >your mode". In this regard, Morse beats the daylights out of those
: >modes. Technical superiority? Nah. Current communications
: >superiority? Yup.

: It's a tautology that you can't work someone not operating your mode,
: but the inverse is also true.

As though "you can't work them if you can't hear them" _isn't_
tautologous???? So what?

: I'm not losing any sleep over that, and
: doubt any other digital operator is either. In the universe of possible
: contacts, there is no shortage of those sharing a common mode.

Your sleeping habits (and your strange fascination with Jimminy Cricket)
are of no concern to me. But what you are saying, essentially, is
that as long as there are enough people out there operating your mode
that you have people to talk to, you're happy. That this represents a
tiny fraction of the hams world-wide is of no concern to you. And, by
extension (based upon comments in another of your posts), those
operators who "quack" (speak) and "beep" (use Morse) are un-enlightened
cavemen not worthy of your attention.

: The early
: SSB operators couldn't intercommunicate with envelope detector equipped
: AM operators either, but eventually the superior mode became dominant
: anyway.

Nice apples-to-oranges comparison. SSB is a "better" way for two
people to "talk" to one another. Computer-aided, machine-to-machine
digital modes have little in common with human coded and de-coded
Morse. You would be more accurate comparing modern digital modes with
traditional RTTY.

I've enjoyed your recent posts, Gary. They do a good job of giving
people a peak at your fundamental mind-set and remind all of us that
those _concerned_ with "superior technology" and "progress" advance the
human condition, while those _obsessed_ with it sometimes have little
regard for how it might impact people in the present.

You appear to be a technical wizard, Gary, and you obviously put more stock in those purposes and goals of the Amateur Service which correspond to your interests. Others (some of whom could even be described as "appliance operators") choose to hone their operating skills and optimize their ability to communicate with as broad a cross-section of hams as possible, thus fulfilling other purposes and goals of the service.

There are those who choose to do nothing more than memorize the question pools, and there are others who choose to ignore the "quackers" and "beepers" and communicate only with other crickets. At the risk of mixing birds, insects, and plants...it sounds like you might be sharing the pod with some peas you really don't like.

Source record: 241455

In article <wasmir.77.00746A64@dlep1.itg.ti.com> wasmir@dlep1.itg.ti.com (Wasmir Robeves) writes:
>
>I'm in the process of building my house. Can I use the reinforcing steel bars
>of the foundation, buried about 6 feet under ground, as my grounding system?

Absolutely. This is called a Ufer ground system. Make sure all the rebar
is bonded together before the concrete is poured, allow 20 feet of 0.5 inch
rebar for each 8,000 amperes of surge current you wish to dissipate, and
do use at least one driven rod in a location you can inspect as a backup
safety ground in case your Ufer connection corrodes away unnoticed.

Now realize that a Ufer ground system isn't a substitute for a proper
buried radial system in most cases. That's because the Ufer structure
is usually not centered on the base of the antenna, and because it is
unlikely to extend out 1/4-wave or more from the antenna in all directions.
If you aren't using an unbalanced vertical antenna, or don't need to
transition lightning surges from your tower base into the Earth, IE
don't have a tower, then the Ufer ground alone will be sufficient,
otherwise lay that radial ground system too.

Take advantage of any other buried metal on site too. For example,
if you have a metallic underground water system, tie into that too.
Bring all the various Earth connections to a single connection point,
don't daisy chain. Bring everything that needs an Earth connection
to that single point too, again don't daisy chain.

You are so right! I think each person should be evaluated on an individual basis.

There are many people who became "felons" and who genuinely saw their misdeeds and changed their lives. Geronimo Hayes comes to mind.

There are some who have become felons because of stupid laws. Take the case of the woman who recently found an eagle feather in a zoo and mailed it to Hillary Clinton. She had absolutely no idea there was a federal law making it illegal to own an eagle feather; all eagle remains are to be sent to the "National Eagle Repository" (whatever and wherever that is.) Now some idiots are thinking of going for a conviction of her as a felon, and also prosecuting Hillary. Come on! Give me a break!

If an individual shows no sign of continuing felonious activities and is living a decent life, then I see no reason to deny that person a ham license. If, on the other hand, the person is of the order of Charles Manson, forget it!

This should work OK. Only thing to watch is that the adapters usually have a stereo plug and your HT will most likely be mono. Pick up a stereo-to-mono adapter while you're there.

Don't know about your first idea. If it worked it'd probably at least royally irritate the other folks monitoring the repeater.

Have fun... Mark AA7TA

>TNC and the radio?

On our first attempt in getting packet into the EOC, our local RACES group installed the radio, antenna and TNC in the 16th floor radio room of the municipal building. The computer was located in the basement EOC. While the connects were very poor and unreliable, we did get some. We ended up moving the TNC down to the basement, and have had reliable connects since.

So -- unless you are running a length of wire the equivalent of 16 floors, you probably could. I have no idea what the maximum length should be, but you should be OK!

> Why? How is that relevant?
>
> : -Tom R. N1OOQ randolph@est.enet.dec.com
>
> 73 and live better digitally
> Jim, VE3XJ
>

Are you STILL defending your anti-CW beliefs Jim ?
You should spend half as much time enjoying CW as you do opposing it.

Oh, by the way, you never DID reply to the questions in my last
message to you back when I had time to be a CW supporter...
(I see many of the pro-CW supporters have some out of the woodwork..
the silent majority !?)
You stated something to the effect of being involved in the changes
to get the No-code licence put into place here in Canada (or that's
how it sounded).
I wanted to know if you are a Government official or ISC employee...
the way you were going on sounded like you were right there witnessing
the signing of the final draft to the new regulations.

It's such adamancy that causes one to wonder if there is some sort of
personal gain to be had. So fess up Jim ! Got a finger somewhere
in the pie ? Are you directly or indirectly involved in the sale of
Ham related items ? Might it get you somewhere if CW is eliminated
from the testing ?

Don't get me wrong, CW may not be as important as is was in the mid
part of the century but it still serves a purpose in the testing and
until it can be replaced with something that makes a person EARN their
ticket then it shall remain. I guess the governing bodies still believe
so anyway !! We couldn't have incompetent operators screwing up
communications worldwide. That's the whole point of exam...
to test for operator knowledge and competence... how to deal with
interference, be it from local contention from the transmitter or to
other communications around the globe.

Is CW a WRONG thing ? So what that it is not the most efficient means
of communication. It's fun ! It's not impossible to learn mind you the
lazy or stupid might disagree...I guess they're the ones who might also
not understand how to deal with interefence problems...
"I want HF phone privs but I don't want to have to work for it."

I gave many examples of why CW is still useful in Amateur radio...
I never heard any reasons as to why it should go. This is my rudimentary
question. ("Because its outdated" is a weak reply.")

Regards..Hugh VA3TO

Hi Ben

Auto Parts stores these days don't sell components they sell complete kits.
And only if they have a part number to go buy.

I found the same problem, no washers in the new antenna packages. At first
I was cutting my own from truck innertubes. But when I was at an electrical
supply house, found several rubber washers used to seal outdoor electrical
boxes.

Most come with a snap cap which raises the price a little, but they had all
sizes from 1/2 hole all the way up to 4 inch hole and outside diameters
proportional to hole diameter. The black rubber was also UV protected so
they were ideal for the purpose.

I required one with a 1 inch hole also, the washer, complete with snap cap
I didn't want was $2.85. So check out your electricians supply houses in
your area.

Gary

1841. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-29 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.sJDZ9c1w165w@GRAFex.sbay.org>
Source record: 241463
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your
system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

Source record: 241519

Hi all
TNX for the look

We the local radio club are installing a new repeater at ou local site
and we will require an IM study.. We will be running about 8 repeaters
and several point to point links from this site.
The proble we have is the local Phone company and a majour site 0.6 Km
from us. They have over 300 different transmitters at this site.

We are looking for a program to calculate 2,5,7, etc order harmoics. the
standard type stuff. the only program we have is hard to use as it will
not read data from a file for the input frequencys.

Any one know of a good program and where I can get it.

Tnx

There is a harness somewhat like this sold in American ham radio
magazines. It uses a nylon pad on the chest and the radio is strapped
on it with velco. Shoulder straps secure the holding pad.
If you need an address, I'll try to dig it out for you.

Theoretically, once punishment is over, rights should be restored.
Otherwise, we are condemning everyone convicted of a crime to punishment
much more sever than that prescribed by law.

On the other hand, given the (often) light sentences and early release
programs now in abundance, I'm not so sure the lengths of incarceration
meet the original definitions.

I agree with you regarding reassimilation, but I also worry that recent
trends put the rest of us at greater risk.

1846. A favor from Hams who speak/write another language

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-29 00:00:00 UTC
From: skremer@iquest.net
Message-ID: <DCHorl.2A3@iquest.net>
Source record: 241522

My QSL card shows a photo of the car that won the first running of the Indianapolis 500 in 1911. The card also carries a caption (see below) with some history of the car. I had the caption translated into Spanish and French, for my contacts who speak those languages as their primary language.

Recently I have put up my own Home Page, "Amateur Radio & Funny Stories" at

http://www.iquest.net/~skremer/

Keeping up with the international tradition of amateur radio, and for the fun of it, I thought I would try to have the caption translated into as many languages as possible.

I have already had it translated into Espanol (Spanish), Francais (French), and Deutsch (German).

So if you write a language other than English, if you could translate the four following items and E-mail it to me I would appreciate it very much. Your translation will be converted to HTML, the computer language, so if you are familiar with HTML and could convert any unique characters to their HTML code that would be a help.

1.

Carmel, Indiana is a suburb of Indianapolis. Pictured is #32, the Marmon Wasp driven by Ray Harroun to victory in the first Indianapolis 500 auto race in 1911. Above the steering wheel is the first ever rear-view mirror on an automobile.

2.

Translation courtesy of: (your name and call sign)

3.

Back to Steve's Home Page.

4.

(The name of your Language, in your Language) (ie. German = Deutsch)

Thank you and best 73,

EOSS-24: CENTRAL COLORADO REPEATER/ATV BALLOON LAUNCH

Region: Central Colorado

Date/Time: July 30 / 9:00 AM MDT, 15:00 UTC

Location: Monument, Colorado (20 miles north of
Colorado Springs)
Site Coordinates: 39.09 North Lat.
104.87 West Long.
ATV: 426.25 MHz AM (1 watt output) NTSC color
video
VHF/UHF Repeater: 446.000 MHz FM Input
147.555 MHz FM Output
(note change as of 7/16/95)
Beacons: a) 147.555 MHz carrier from repeater always
on; (periodic Morse ID audio on FM)
b) 144.34 MHz Morse ID audio on FM
(periodic; frequency shared with packet
telemetry)
Telemetry: 144.340 MHz FM (1 Watt output) - AX.25, 1200
baud mostly plain english text; includes APRS
position data string.
Foxhunters: Pikes Peak FM Association, 448.450 MHz

No. The article didn't say *that*. As far as I know, there is no audio monitoring point on the P-38. I'm confident the reviewer was saying he couldn't hear the RTTY *from the radio speaker*. However, I also expect (I don't have one yet so I can't say positively) that the P-38 is far more than a matched filter and a slicer. If that's all it is, then it isn't achieving anywhere near what is possible. I expect it is exploiting the coherent correlations in the encoding, likely using oversampled sigma-delta integrate and dump techniques. That can offer real decoding gain with a uniform element code. It doesn't help Morse, because Morse isn't a uniform code.

Let me reiterate, machines are not better than alert, attentive, highly trained human Morse operators at decoding Morse code. They can be as good (though most of the junk sold to amateurs *isn't*), but not better than the best human operators operating at their best (though that's not something a human operator can do for long, but that a machine can do 7x24). Of course, that puts machines well ahead of the average amateur operator, but put that aside. Where the machines shine is with encodings that are better than Morse (and frankly most are). Humans have problems with uniform code recognition, and humans can't do the sigma-delta correlations that machines can do on coherent uniform codes.

The real improvement comes from the better *codes* not from just replacing the human with a machine. We only have to use machines because humans can't cope with the better codes. If humans could decode trellis codings in their heads, then we wouldn't need machines to do it, and weak signal performance would *still*

be dramatically improved over OOK Morse encoding. It's the code that makes the improvements possible.

The brain is a marvelous adaptive matched filter. That's why skilled Morse operators can copy signals that are in the noise floor of a 500 Hz filter. Their brains are simulating a matched filter approaching the actual 35 Hz (average) bandwidth of the signal. But average matched filters aren't sufficient for really weak signal work. To do really weak signals, a better code is needed that allows exploitation of other information included in the encoding; phase, timing, etc. The human ear is practically phase deaf, has only crude absolute pitch resolution, and humans' sense of timing is crude at best, certainly far from sub-millisecond resolution. That's where the human loses to the machine, when the codings contain information a machine can easily extract, but that the human cannot resolve. It's that extra information that yields decoding gain. It's a direct consequence of Shannon's information theorem.

C=B*ln(1+S/N) transforms to S/N=exp(C/B)-1

What that tells us is that the more information we can extract from an encoding about its symbols, the higher the effective SNR will be. So a coding that is information rich in the sense of offering more clues to whether a symbol is a 1 or a 0 gives us a coding gain, *if we can extract those clues*. Machines can from uniform coherent codes, humans by and large can't.

Uniform coherent codes have another advantage over non-uniform codes like Morse. Their spectra is discrete. The OOK Morse spectrum is a hodgepodge, consisting of incoherent dot, dash, intra-element space, inter-element space, and word space durations, all mixed with no a priori order. A uniform coherent code has precisely two discrete states (to the first order). This means a perfect matched filter can be used on a uniform coherent code. A perfect matched filter is impossible for Morse because the spectrum varies depending on what is being *spelled*. The receiver has no a priori knowledge of that (that's the information it's trying to figure out), so the receiver can't construct a perfect matched filter for the modulation, and Shannon's Theorem says the effective SNR declines in such a case.

This is all rather basic information theory, as it applies to communications systems. It's something every ham should know deep down in his gut. But, like the idea that Morse is language, rather than what is being *spelled* in Morse being (some) language, this is something that many hams obviously do *not* know So we still see Morse being touted for "getting through when nothing else will" from time to time.

>earth and CW?

I love it! That isn't what he's saying, however. Suppose I received
THE .-. .. --# HR IS. I'm not going to think it says THE RIM HR IS.
That nasty static crash took out the last element of the letter G,
so I'm going to know it should read THE RIG HR IS. Now one could
assume that from QSO English context, but knowing that static
crash obliterated the last element of the character in question is a
bit of elemental knowledge we wouldn't have looking only at the
printed text. Since we know the last element was trashed, and since
we know that the only three element letters begining with -- are
--- and --. , we've shrunk the universe of possible answers to only
two, O or G. Without that extra elemental knowledge, we might assume
the missing element was at the front, giving us O or W. Now we know
thanks to elemental knowledge the sentence fragment must read either
THE RIO HR IS, which makes no sense, or that it reads THE RIG HR IS
which does in the context of QSO English. Without elemental knowledge,
we must also include the possibility that the fragment reads THE RIW
HR IS. Which in this case makes no sense in QSO English either, but
could make sense if the crash had taken out an element in another
context.

Fortunately, machines can also use this information. In the coding
scheme proposed by Karn, the static crash would generate a bit of
knowledge called an erasure bit. Thus the elemental clue would be
preserved for later contextual analysis. In the case of Karn's
scheme, this elemental clue is passed to the FEC algorithm, simplfying
its job of identifying and correcting the erroneous element.

KLIXON (division of Texas Instruments) thermal switches show up in electro-junk stores for less than a dollar around here, but the selection of temperatures is not real great. There are thermal switches in the Newark Electronics catalog.

Or you might try an LM335 + LM339 temp sensor and comparator. If your control system has a spare analog input, run the 335 into that and track the temp of the heatsink directly by software.

disposal station?

> In the final analysis, it is aesthetics which determine the quality of
> our lives.

The problem with using aesthetics to determine "rights" is what
principals do you apply to determine the extent to which aesthetics
can be imposed? I find bell bottom jeans unaesthetic. Does that
mean it is reasonable to write a CC&R that prohibits bell bottoms?

> Aesthetics are NOT nonsense. The aesthetic sensibility is probably the
> only thing that is uniquely human. In denying aesthetics, you are denying
> your own humanity. Go back to the jungle and live with your ape cousins,
> Monkey-Boy - they won't care if you build a tower.

The only thing that is uniquely human? What a stretch. For someone that
claims to do object analysis and design, you have an amazing ability to
exclude relevent domains from your analysis. If aesthetics were so unique
and important, why didn't our founding fathers feel the need to protect
them in the Constitution? Because aesthetic arguments subject one to
the whims of those in power. Perhaps that's why they felt the need to
explicitly spell out a long list of rights that are inalieable. They defined and
used a set of principles to make those decisions instead of popular fashion
which is generally all aesthetic arguments often amount to.

73,
Todd
N9MWB

PS "Monkey-Boy"? How cute. Would you like to insult my mother while
you're at it? Or perhaps you'd like to have your father beat up
my father? Good grief! I find your aesthetically displeasing, perhaps
you should be tried for that and executed. ;-)

One wonders how having "done their time" would make up for their violent
acts against society such as murder, rape, armed robbery... These
type of folks should be kept off of the air.

"... name here is Joe, WX is FB, just finished 10 years for killing a cop

Hey, be thankful we aren't talking about our gall bladder operations
like some old wheezers do ON THE AIR. You'd turn the dial if you found
that boring there. Here just hit the 'n' key (but not before reading
my latest post, it's good). We can't carry out these discussions on
the air because we don't share common modes (that we're willing to
use) there.

And BTW, I've been a busy little bee this evening, having several
intersting chats on the other screen ON THE AIR with those folks
down under, and on the *other* screen with some folks across town.
Love those VTs. Can't you multitask?

>we can improve the statistics. The best time for meteors is in the early
>mornings from 0400 to 0800 LOCAL time. But it is not much worse the rest
>of the day...

BTW, best success will be had with the beam pointing through the
radiant of a shower, or toward the dawn line in early morning.
That's when your beam's conic will intersect the largest number
of meteor trails. Low gain antennas will work best, about a 60
degree beamwidth is near optimum to illuminate the most likely
shared volume with your intended recipient.

You'll also do better if you string several frames together in
one burst. The odds are that when a trail appears it will occur
during a frame, which will then be discarded, but if you have
several frames in flight, one or more should "hit the window"
offered by the trail. You might want to turn PASSALL on in your
TNC to see these partial frames.

Most trails at 2 meters will, unfortunately, be underdense, so
expect noisy signals most of the time. Things will be better on
6 meters. Toward dawn, the meteors will hit the Earth at highest
velocity (combination of their intrinsic plus the Earth's orbital
velocity) so you'll likely have some nice dense trails that will
produce "clear as a bell" signals.

Good luck, and watch for KE4ZV.

Well, interference is *different* from gaussian white noise, but information theory tells us that GWN is the *worst* case (for a given SNR). In either case, matched filters do the best job possible of rejecting interference or noise occurring outside the instantaneous spectrum of the signal. Detectors that can switch between mark-not-space, space-not-mark, mark-only, and space-only will work better against discrete interference than against GWN. What matters is the SNR in the match filtered channel. There's always GWN there, but interference usually won't hit *all* of the signal spectrum at once like GWN does, and so can be rejected by a smart detector.

You are probably perfectly correct about the antenna already being weather tight, but the gap still bothers me. Don't want to use silicon sealer, because it would be a nuisance when removing the antennas.

Thanks for the reply. Still looking for rubber washers with a ~1" inner diameter.

>I would like to find out the proper way to fully discarge ni-cad
>batteries so that I can correct the memory. The radio (HTX-202)
>shuts off at 5 volts but I want to fully discharge them. Thanks in
>advance!!

DON'T DO THIS!

Modern NiCad chemistry does not develop "memory". And you will surely
reverse a cell in the pack if you try to discharge it all the way.
That will ruin the pack. The only safe way to discharge a NiCad pack
is to remove the individual cells and discharge each of them separately.
Since that will mean breaking the spot welds that hold the cells together,
you don't want to do that.

NiCad memory was a very esoteric condition that could occur with
older chemistry cells if they were cycled many times in a very
particular way. This never happens in HT packs, so even if your
cells used older chemistry, they still wouldn't develop memory.
Lay that myth to rest right now.

Now if your pack shows reduced capacity or depressed voltage,
there are a couple of things that could cause that. One is a
cell that has previously been reversed. That's fatal and requires
a pack replacement insert. The other possibility is abusive charging.
A poorly designed rapid charger can do this, as can leaving the
pack on a slow charger for weeks. When your radio says the pack
is discharged, put the pack on a slow charger for 15 hours, then
use it until the radio says it's discharged. Do this a couple of
times and full capacity and voltage may be restored. If not, then
it's time for a pack rebuild.

The most important thing to maximize battery life is proper charging.
Don't overcharge, don't overheat, and don't leave on charge for long
periods of time. There are a few good rapid chargers on the market,
but there are many bad ones. A pulse charger with end of charge sensing
is generally OK, but timed rapid chargers are death on batteries.
If you use a slow charger, IE a 0.1 C rate charger, make sure the pack
is discharged to where the radio complains before putting on charge,
charge for just 15 hours, no more, and then take off charge. Don't try
to charge a partially charged pack, IE one with a terminal voltage
greater than 1.0 volt per cell. And don't slow charge for more than
15 hours.

1874. 20 Meter CW receiver question !

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-30 00:00:00 UTC
From: buddy10@aol.com
Message-ID: <3vgksn$7h9@newsbf02.news.aol.com>
Source record: 241400

I have purchased a 20 meter CW practice receiver for W1AW code practice(cost about $50.00). It does not come with an antenna. Could i use a piece of #12 copper thhn wire as an antenna ? How long should the wire be ?

P.S. The frequency on the receiver is not adjustable,just the volume. I must assume that it is set to the exact W1AW frequency at the factory.

P.P.S. Just passed my 5wpm CW test yesterday & I gotta get ready for the 13wpm next month !

• SCAN-Z1 (1:202/731)
•••••••

got to dig a bit...

8. LCD Backlight Mod: You will see three wires coming from the rear of the LCD display (red, white, blue). Follow the blue wire to where it is soldered to the board. Move it to the empty position just to the left of it's current position. This feature will now enable the light whenever you transmit... So you know that you are Keying up the rig, and what frequency you are transmitting on.....

9. Locate IC6, (a square 48 pin chip) that is above and to the right of the lithium battery. Get a small jumper wire (#26 or smaller) and connect one end to pin #7 to either side of chip resistor R3.*** NOT CLEAR HERE BUT VERBATUM *** the function switch will now provide another "bit" to address the memory channels. i.e. when not holding the button and tuning a memory channel: YOU NOW GET 16 EXTRA CHANNELS !!!

10. Close everything back up, tucking the extra wires in and being sure none of them get pinched by the case.

11. RESET the CPU and your off !!!

NOTES: Perform the modifications at your own risk. Be sure that you have a good level of soldering skill before attempting to try this modification. Having the service manual at your side will be a great help. A Scope for fine tuning the circuits to work at the new frequencies will definitely be a plus. A Digital Multimeter can't hurt either. Best of luck !!! 73 De N2JBO

Can anyone tell me the FTP site where I can download the latest version of Super Morse from ? Please e-mail me.
Thanks !

Joe,

I bought one of those adapters to feed the audio from my TS-50 into my car stereo, but one problem. I was running 100 watts HF, and the RF got into the tape deck and speaker system. It was great as long as I was listening...but when I transmitted it fed back through the speakers

73,

Steve Kremer

It is inside the front panel -- sandwched between two boards -- and
its NOT an over the counter battery. But if you are game -- and want to
chance it -- remove the old battery and bring out two wires (+ and -) so
that the battery can be located elsewhere -- as any space and insulation
you can find.
I have a brain-dead 331 at the hamshack, at work that I will be
moding on Tuesday.

Please don't discuss this issue in this newsgroup (rec.radio.amateur.misc). It really belongs in rec.radio.amateur.policy.

Thanks.

Like when I worked RG8U or T4XB (he was running a Drake xmtr)?

Anyway, Sri Lanka is 4S...

What exactly are "Call cards"?

You mean QSL cards?

You have RELAYS in your REPEATERS in 1995? Arrrrggghhhh!!!

Oh Come ON guys, move into this decade, at least.

There are no push-to-talk (i.e., keying) relays in our entire repeater SITE.

Good Grief!

Hams advancing the state of the art, phooey.
- Brian

: >Wait a minute ... you, your neighbors, and your real estate agent all
: >"know" towers (not "appearance or condition" in general) affect values
: >(not "curb appeal" but sale prices) of neighboring properties -
: >*regardless* of any scientific evidence? Wow.
: >
: >I'm sorry, but I find evidence more convincing than I find the "it
: >fits our prejudices, so it must be true" sort of argument"

: Sorry Dave - you're living in dreamland.. I have gotten active
: in "Block Watch" recently, and none of my fellow neighbors
: found my 40 ft. tower and tri-bander to be "attractive"...
: I personally LOVE to go out and just stand there admiring it,
: but for some odd reason they don't have the same appreciation
: of alunimium I do. I suspect this is a universal trait!

I'm with you! But how does that prove damage to property values? How much really comes off your neighbors' selling prices because of the tower? "I don't particularly like your tower" is not necessarily the same thing as "I don't particularly like your toxic waste dump." Failure to satisfy mere whims won't do much harm to property values. My claim, remember, is that polls can't tell you the story. Only (well-done) studies can.

(OTOH, my *opinion* is that if - *if* - towers don't damage property values, they're too trivial to restrict, and neighbors should mind their own damn business. The problem is the neighbors can outvote hams. Who said politics was fair? Our only hope is to outlobby them. Clamorous minorities frequently get their way, but not if people whink damages is being caused when it isn't.)

1890. Ham stressors

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-30 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7934-233704801@ccsnet.com>
Source record: 241416

Here is the list of stressors, along with their relative weights, from Drs. Thomas H. Holmes and Richard H. Rahe, psychiatrists at the University of Washington Medical School. K1OIK made certain additions:

Event Relative Rating
Talk to an attractive female direct 200
Talk to a female on the air 103
Forced to sell rig 102
Theft of rig 101
Death of spouse 100
Ham takes a bath or shower 100
Antenna falls 100
Try to fix own rig 99
Spouse walks into ham shack 99
Divorce 73
Receiving a packet message 69
Marital separation 65
Jail term 63
Death of close family member 63
Sending a packet message 54
Personal injury or illness 53
Listening to a repeater 52
Marriage 50
Fired at work 47
Marital reconciliation 45
Retirement 45
Change in health of family member 44
Pregnancy 40
Sex difficulties (all hams have this) 39
Gain of new family member 39
Eyeball "QSO" 34
Change in financial state 38
Death of close friend 37
Death of a ham friend 01 (all hams are dead anyway)
Change to different line of work 36
Change in number of arguments w/ spouse 35
Change in number of QSOs 33
Mortgage over $10,000 (!) 31
Foreclosure of mortgage or loan 30
Change in responsibilities at work 29
Son or daughter leaving home 29
Trouble with in-laws 29
Outstanding personal achievement 28
Outstanding ham achievement 67

Wife (spouse) begins or stops work 26
Begin or end school 26
Change in living conditions 25
Revision of personal habits 24
Trouble with boss 23
Trouble with rig 87
Change in work hours or conditions 20
Change in residence 20
Change in schools 20
Change in recreation 19
Change in call sign 99
Change in church activities 19
Change in social activities 18
Mortgage or loan less than $10,000 17
Change in sleeping habits 16
Change in # of family get-togethers 15
Change in code speed 15
Change in eating habits 15
Vacation 13
Christmas 12
Minor violations of the law 11
Receiving a QSL card 09
Ham's child dies 07

Feel free to make additions and I will update the list.

Burt K1OIK.

1891. Ham guts

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-30 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7934-233707502@ccsnet.com>
Source record: 241417

A man went to a guts store to get some guts for dinner. He sees a sign remarking on the quality of guts offered at this particular gut store. So he asks the butcher: "How much for Engineer guts?"
"3 dollars an ounce."
"How much for teacher guts?"
"4 dollars an ounce."
"How much for ham operator guts?"
"100 dollars an ounce."
"Why is ham operator guts so much more?"
"Do you know how many hams you need to kill to get one ounce of guts?

1892. Off to the RACES

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-30 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <7934-23370803@ccsnet.com>
Source record: 241418

From: WF2R@WA2YSM
To: RACES@NEBBS
Subject: Is it really necessary?

There has been much discussion about ARES/RACES etc on the packet system. One message "crows" about the quality of volunteers in California, another "cackles" about a dispute between RACES and ARES members in TEXAS.To all these people whom are looking to carve their niche in amateur radio by participing in so called emergency communications: you are wasting your time. Emergency communications is already provided by many other groups, including the american red cross. Yes, the ARC was granted use of 220-223 MC by the FCC for their emergency communications use. Their attorney who petitioned the FCC is also the ARRL General Counsel in WASHINGTON DC. Most of the members belonging to these groups ARES/RACES are bored, lonely people with no social ties, the remainder are CONTROL FREAKS, people that want to do ONLY THEIR WAY. Just read the packet messages that come out of California regarding this topic, and judge for yourself. If you are new to this hobby, and somehow you have been corralled into this "we have to provide emergency communications syndrome" you can easily bail out now and avoid agruments, personality clashes etc. Just tell the group leader you are out, you will be better off in the long run.

OK alright already take it for what it is, a file I found.
AND I AM NOT A NEW TECH! DON'T think I7m some stupid no coder because that
isn't
the case yes there are quite a few lid no coders that just wanted something to
add to their cb equpiment but tthen there are radio tech , computer programmers
and other intelligent people (mostly in elctronics fields) that know what they
are
doing. You can't stereo type a group like that...

Why do you think it is called bgus htx 202 mod?

wnewkirk@iu.net (Bill Newkirk) writes:
>Peter Lemken <plemken@mail.hb.provi.de> writes:

>demonstrations of such communications would be in the military in wartime
>conditions. they're the guys with all the new toys.

Most will not understand this but a DX pile up can be much more severe
than what one would encounter in the military. The military wouldn't
purposely limit themselves to a single frequency, and they would not
permit dozens and dozens of stations to call a single operator.

So many folks in this debate like to pretend we're the military or
commercial operators, but of course, we are not. We seperate our-
selves from them by intentionally chasing DX, building our own
equipment, freely choosing frequencies within a band and freely
choosing bands, freely choosing modes such as moonbounce, ragchewing,
modifying our gear, turning our radios on or off when we feel like it,
contests, swap meets, working and ignoring whom we please, (you've seen
me list these and more before...).

>>PROVE what you want to tell us. Prove a 200 QSOs per hour rate with a
>>digital mode. Show us the QSL-cards, confirming your digital contacts with
>>3Y0PI, 9M0S, 5A0A and other real dx and then we can start a discussion. But
>>arguing about dx without knowing what dx is about in reality is stupidity,
>>stupidity, stupidity. Think about it.

>you going to lug the gear to those places?

No, I believe he's refering to the folks who reside at these places.
The guys in the South Pacific that I QSO with will only have CW and
SSB for a long time to come; many use only CW gear they've built
themselves.

>my computers send code pretty well. how are you going to know if i'm
>a computer or a real operator (tm)? at your end we're just going to "beep".

It's pretty easy to tell the difference between a fist and a computer.
Also, I can impart such a swing in my sending that your computer won't
be able to decipher what I'm sending. (Back on the military circuits
I used to be able to determine who the op was just from his swing.)

>exposed disturbing. Tried several hardware stores, and an auto parts store,
>looking for a rubber washer, and they looked at me like I was from Mars (and
>I don't mean MARS).

>Any ideas on where to get a ~1" inner diameter rubber washer?

I faced this exact problem and found several solutions. The best is
to go to a hardware store (for me, Home Depot and Ace Hardware) and get
a number of the large neoprene washers used to seal the bolts of toilet
bowls. The largest I found were 2" in diameter. They come in the thickness
you need, but only have 3/8" inner diameters. I happen to have a
Greenlee punch for octal tube sockets left over from a previous life
in the vacuum-tube era and used it to make the hole large enough
for the Larsen mounts (I have LMO's, not NMO's). Lacking this tool,
you will have to do some skillful trimming on the inside of the washer
to get it to fit. I did this too, originally, with a pair of small,
sharp diagonal cutters with reasonably good results. The bottom
skirt of the antenna loading coil will cover minor mistakes.

The other thing you need to know is that Larsen dealers carry these
washers as a separate item costing maybe a buck. HRO here in
Phoenix had them last time I checked. I prefer my "homemade"
versions, though. The Neoprene is absolutely impervious to the
UV radiation that eats up the stock Larsen rubber washers. And
the larger diameter (2") of my washers makes the antennas much
more water-resistant (hard to really tell here in AZ, though).

Finally, it is possible that you will find these washers but they will
be too thin. I had this problem with Ace, they just didn't have the
1/8-inch thick washers. The solution is to glue two of the thin washers
together with RTV and then ream out the center as above.

I'm happy to see that I am not the only person that has been
bugged by Larsen washers. ;-)

73,

Jim Bromley, W5GYJ

1898. Re: ARRL Callbook digitally ?

>
> Am I right ? If so, does anybody know, where ?

The ARRL does not publish a Callbook. There is at least one private company publishing callsign info, and a couple of companies that sell that information on CD-ROM.

If you have access to TELNET, you can access the latest Federal Communications Commission database records at:

callsign.ualr.edu 2000

This database is updated daily, if my understanding is correct, from the latest FCC database records.

Keep your radio tuned to 52.525 MHz...thats the international simplex
calling frequency. I've worked many stations there from my car.

You may also want to listen below 50 MHz for some police, utility and
commercial communications from other states when conditions are rolling.
Once you hear some action there, pop up to .525 and start calling CQ.
Sometimes the MUF doesn't get as high as 50 MHz but it's one of the few
skip indicators that you can use on FM.

Actually, the Sporadic-E season for this spring/summer is tapering off.
Openings will be less frequent until Dec./Jan. when the shorter winter
Sporadic-E season kicks in. Not to be discouraged, there are still
openings between the "Es seasons", they're just more 'sporadic' !

Regards..Hugh VA3TO

The following is a QST

Australian hams loose part of the 70 centimeter band and the
F.C.C.issues new fines against four New Orleans hams. Find out

more on Newsline report number 936 coming your way right now!

(*****
VK HAMS LOOSE AT UHF

Australian hams have suffered a major blow to their amateur radio operations. This, with the loss of important spectrum on one of the worlds most popular UHF band.

"Amateurs in VK have lost part of the 70 cm band. In fact 3 Mhz. All the way up the coast to VK4 radio location is now the primary use and is being used for marine applications.
The Spectrum Management Agency in Australia says that no new applications will be processed for this part of the spectrum. It all comes back to the old adage, Use it or Lose it!" VK4BB

The portion of the 70 centimeter band affected is from 440 to 443 MHz. VK4BB says that this spectrum was primarily used for repeater interties and linking. We will have more international news later on.

(*****
FINES REDUCED

Here in the United States, four New Orleans area hams cited by the Federal Communications Commission for malicious interference on the 2 meter band have had the amounts of their monetary forfeitures adjusted downward. But only because an appeals court said that the commission has no other choice.
The four are identified as Joseph F. Richard III-N5JNX, Vernon Paroli-KA5OWW, Will T. Blanton-N5ROC and John B. Genovese-WB5LOC. There were originally cited for transmissions made in the spring of 1993. In September of that year, all four received Notices of Apparent Liability from the FCC's New Orleans office. Two months later, in November, after reviewing responses of the four hams, the F.C.C. issued Notices of Forfeiture in the amount of $2,000 to each ham.
All four men appealed the Notice of Forfeitures. While these petitions were pending, the Court of Appeals for the District of Columbia Circuit vacated the F.C.C.'s forfeiture guidelines for fines in all services. As a result the F.C.C.'s Compliance and Information Bureau was forced to reduce them.
On July 10th, the F.C.C. again issued Orders in all four cases. The agency reduced the fine for N5JNX, from $2,000 to $1,000. It also rejected his claim that tape recordings used by the F.C.C. in its case against him were inaccurate or misleading.
KA5OWW, had his forfeiture amount reduced to $700. This, based on his claim of being financially unable to pay the $2,000 dollar forfeiture originally assessed.
The forfeiture amount for N5ROC, was also reduced to $1,000 while that of WB5LOC was lowered to $500, because of the shorter duration of his transmissions.

The F.C.C. also paid tribute to the hams of New Orleans who developed the evidence leading to the enforcement action against the four hams. The evidence in these cases was compiled by the Amateur Auxiliary. The commission said that the use of amateur volunteers for the purposes of monitoring violations in the amateur service is permitted by the Communications Act. It said that the New Orleans Amateur Radio community has distinguished itself for its self policing operations.
At airtime it is not known if the four hams will pay the fines or go the expensive route of appealing further to the federal courts.

(*****
MITNICK GOING HOME

Federal prosecutors in California, not North Carolina, will handle the prosecution of computer hacker Kevin David Mitnick, N6NHG. Mitnick has entered a consent agreement with the government to move the case to his home state. There he faces more charges, including probation violation.
Assistant U.S. Attorney John Bowler says that the consent order signed by Mitnick on June 29th declares that Mitnick wishes to plead guilty to the offense charged. That he also consents to the disposition of the case in the Central District of California in which he is also accused.
Mitnick, who is originally from Van Nuys, California was arrested on February 15th and charged with twenty three counts of computer fraud. Under the plea agreement, N6NHG agreed to plead guilty to one count of illegally using fifteen stolen phone numbers to dial into computer databases. He faces eight months in jail on that conviction.
Mitnick already has served a year in prison in California for illegally tapping computers at Digital Equipment Corp. He also broke into a defense computer network as a teenager. In 1992, he disappeared while on probation and became a fugitive. A computer security expert from San Diego helped track Mitnick to Raleigh, where he had rented an apartment under a false name. Mitnick was arrested after cellular telephone technicians tracked his cellular phone signal to the apartment complex.

(*****
INDECENCY

Broadcasters and civil libertarians say they'll challenge a recent appeals court decision that broadens the government's power to limit children's exposure to adult programming on radio and television. The U.S. Court of Appeals for the District of Columbia has given broadcasters new instructions to follow when airing indecent programs limiting them to after 10 p.m.
Under F.C.C. current rules, TV and radio stations may air indecent shows only between 8 p.m. and 6 a.m. The court ruling

narrows the so called safe harbor for these programs to between 10 p.m. and 6 a.m. Cable television is not affected.
The court's decision does not affect the F.C.C.'s longstanding indecency definition, but rather the hours when broadcasters may air such shows.

(*****
SKYWARN EWAS

Many hams are familiar with Skywarn, and the next time you visit Alabama you can count on knowing about severe weather as it's happening. This, just by listening to one particular amateur repeater. In Birmingham, a story about a handy new feature amateurs there thought of, designed and built themselves:

Tune in Birmingham's 443.75 Mhz repeater during threatening weather and you may here this:

"Attention all amateurs. Please stand by for an important weather announcement direct from the National Weather Service forecast office in Alabaster.

The National Weather Service is issuing a severe thunderstorm warning for western Shelby and southern Jefferson Counties. Please say tuned important weather information will be filed very shortly."

It's called EWAS. Emergency Weather Alert Systems. It's believed to be a first for amateur radio in Alabama.
EWAS is the creation of Ron Arant, N4PHP. Arant is active in Skywarn Communications Services. He is a control operator for the W4OW repeater, which is used frequently during Skywarn nets.

"Originally amateurs were forbidden from broadcasting or rebroadcasting National Weather Service information. When they changed the rules, immediately it became evident that would be an added benefit to hams involved in Skywarn and that kind of activity." Ron Arant, N4PHP.

EWAS consists of an alarm equipped weather radio and circuitry to send its signal through the repeater. When the National Weather Service sends its emergency alarm tone during severe weather watches and warnings, EWAS uses digital technology to alert hams that emergency information is about to air. Weather radio then retransmits, over the repeater for a preset time. The alert system also includes customized announcements stored in computer chips.
EWAS is strengthening central Alabamas Skywarn effort. That's because it gives spotter stations official information as quickly as it is released.

"It just helps the amateur community by making the information available quicker. Especially if this is hams in the field doing

storm spotting. That's were it really comes in handy. They don't have to have 6 radios around listening to it. They are already listening to a repeater, passing traffic back and forth. The same repeater provides them with actual weather service information." N4PHP

Previously hams had to listen to weather radio directly, or they had to wait for the information to be relayed by someone else listening to a weather radio. Now emergency weather information comes directly to them. Immediately and automatically via the repeater they are already monitoring. It's all thanks to EWAS.

"This important weather information was provided in the public W4OW repeater remote base system." recording

Retransmitting National Weather Service weather radio over amateur frequencies used to be illegal. But that changed on September 14th, 1993, that's when the F.C.C. amended its rules about prohibited communications on amateur frequencies.

(*****
ARRL vs. APPLE AT 5 GHZ

The A.R.R.L. is saying no to Apple computer in its bid for new spectrum to create a license free public data communications service. The League has filed comments in opposition to the Apple sponsored petition for rule making that would allocate 300 MHz of spectrum in the 5 GHz band. An proposal that the A.R.R.L. says will affect the Amateur Radio Service.
The Apple petition is designated RM-8653. It asks for spectrum for a new, unlicensed radio service that the League called "essentially unregulated, save for certain technical rules." That the new service proposes the use of directional antennas and relatively high power, and a protected allocation status in shared bands by non-technical persons.
Part of the spectrum being sought by Apple includes 150 MHz, at 5150 to 5300 MHz, and 5725 to 5875 MHz. Amateurs currently have access to the entire range 5650 to 5925 MHz on a shared basis. And in defense of the Amateur Radio allocation in the 5 GHz band the A.R.R.L. cites activity in a number of metropolitan areas around the U.S.
The League says the petition doesn't show why 300 MHz is necessary for such a service. It asks why existing allocations are not sufficient; why existing wireless and wireline services aren't sufficient; and why a proceeding such is this should not wait until current proposals on such services are resolved.
The ARRL also says the petition fails to consider compatibility between the proposed new radio service and other services including Amateur Radio.

(*****
AMIGA COMING BACK

From the U.K., word that Amiga should be back again soon.
G0AMJ reports via packet radio that the German company Escom has succeeded in the buy out. Chris says that Escom will be re-introducing the A1200 and A4000 with a few tweaks. They may also re-introduce the A600 at very low cost.
Escom is said to be the 2nd largest personal computer manufacturer in Europe.

(*****
BENCHER DEVOURS BUTTERNUT

Bencher Inc has announced that it has acquired the business assets of Butternut Electronics Inc of Olmito, Texas. In its June 1st press release, Bencher said it would continue to make Butternut products at the Olmito facility and would market them through the existing Bencher network of Amateur Radio dealers.

(*****
RS-1

Still with science and technology, heres one for you ham radio history buffs. Were you aware that the first Russian satellites were launched on October 26, 1978?
RS-1 and RS-2 were those birds and both contained Mode A linear transponders. Now over 15 years old, RS-1 is still giving signals. Its battery open circuited soon after launch, but the spacecraft's 29.401 MHz beacon can still be heard sending "55" when the solar cells are in full sunlight.
Sadly, the power is insufficient to provide that needed to operate the Mode-A transponder. RS-1 is still up there, but is only a ghost of what it was supposed to be.

(*****
ARRL & NSTA

What does the A.R.R.L. have in common with 20,000 science teachers? They met in Philadelphia, Pennsylvania for the 43rd annual National Science Teachers Association national convention in late March. As in past years, the A.R.R.L. exhibited Amateur Radio and SAREX at the invitation of the National Aeronautics and Space Administration. The exposition of science teaching materials at N.S.T.A. is the largest school exhibit in North America.

(*****
HEARD ISLAND TO BE ACTIVATED THIS YEAR

In DX, for several months a group from the 3Y0PI team has worked discretely on a new DXpedition. K0IR, the organizer and leader of the 1994 3Y0PI Peter I Island DXpedition, will lead a team to Heard Island in November with Sir Edmund Hillary will be the Honorary Expedition Leader.
The Australian Antarctic Division has issued permit number 95/1 allowing a full-scale amateur radio operation. All environmental

assessments and letters of indemnification have been filed and approved. A separate proposal for scientific work during the stay is expected to be approved.
A 140 foot vessel has been chartered for the trip. The team will sail from Fremantle, Western Australia, on Nov. 1, 1995, and expects to land on Heard Island Nov. 12. They will remain until Dec. 1, returning to Fremantle around Dec. 12. The team will be active on all bands and modes, including digital and satellite. The team will elaborate on the strong points of the 3Y0PI expedition, and hopes to take advantage of technical innovations resulting from the 1995 Easter Island and Salasy Gomez expedition in September. Radio equipment is being provided by Yaesu, ETO, and Cushcraft.

(*****
3456 MHz RECORD

Also, extraordinary conditions for tropospheric propagation in the U.S. Midwest have resulted in a new overland record on the amateur 3456 Mhz UHF band. At 12:24 UTC on July 12, Al Ward, WB5LUA, in Allen, Texas, worked Gary Morhlant, WA0BWE, in Maplewood, Minnesota over a distance of 841 miles. The previous record of 736 miles was set on May 1, 1992, between WB5LUA and W9ZIH, in Malta, Illinois. This time around WA0BWE was running about 5 watts and WB5LUA operated 100 watts to a 5 foot dish at 65 feet.

(*****
FUND ADMINISTRATORS REPORT

And now the item you have all been waiting for. The monthly Support Fund Administrators Report. Well, wait no longer.

We begin this months report by sending a BIG HI Linda Reader of Salt Lake City. It is always great to hear from our regulars. We heard from Si Field, KB9IKO from Park Forest, IL. And from the Years Wide Band Repeater Network based in Evansville, IN. From the Golden State we heard from Barbara Kincade of Hawthorn and the Golden Triangle Radio Club of Wildamar. And that is it! We need to hear from more of you to keep these newscasts coming. Remember the clubs who support us with the club name, repeater call and service area get a mention during the newscast id break.

Listen for Andy's next report in about four weeks.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

(* *
(* The following is an important closed circuit advisory. *
(* Attention all bulletin stations. We have received word *
(* from our support fund administrator that the money needed *
(* to pay the our monthly bills is once again dangerously low. *
(* According to N6TCQ, there is currently only $500 in the *
(* account, over a $1000 in bills on file and at least that *
(* same amount coming in every thirty days. *
(* *
(* The bottom line is that this is an emergency situation. *
(* If the funds to pay the July and projected August operating *
(* expenses are not found quickly, we can tell you that *
(* Newsline will disappear before the end of August. This, *
(* because the phone company will turn off our service. *
(* Without telephones there is no Newsline. *
(* *
(* Yes, there are many sources of ham radio news, but for *
(* the past seventeen years, nobody has been able to bring you *
(* this news as quickly and as accurately as Newsline. The *
(* ham magazines have a two to four month lead time. The *
(* various ham radio newsletters are at least a week or two *
(* behind what's happening. And while the ARRL has a very *
(* fine news dissemination operation with it's W1AW Official *
(* Bulletin Station, it is primarily geared to disseminating *
(* ARRL information on the high frequency bands. *
(* *
(* It is Newsline and only Newsline that brings you up to *
(* the minute ham radio news direct to you over your favorite *
(* repeater. That means you can listen to it at home, in your *
(* car or even walking down the street carrying your hand held *
(* radio. *
(* *
(* As we have said many times, the decision whether *
(* Newsline stays or goes is 100% yours. If you want this *
(* service to continue, we will need your financial support. *
(* The address for the Newsline Support Fund: *
(* *
(* NEWSLINE SUPPORT FUND *
(* P.O.Box 660937 *
(* Arcadia, California *

(* 91066 *
(* *
(* Your assistance is needed IMMEDIATELY. We thank you *
(* all for your ongoing generosity and support. Again, and *
(* as always, we thank you. This ends the closed circuit with *
(* Newsline report number 937 for release on Friday, July 28 *
(* 1995 to follow. *

The following is a QST

The A.R.R.L. Board meets in Connecticut, the F.C.C. tells the nations V.E.C.'s that they cannot copyright the question pool and a California ham triumphs over the giant Bank of America. His story and more on Newsline report number 937 coming your way right now.

(*****
ARRL BOARD MEETING

The A.R.R.L. Board of Directors met in its second session of 1995 on July 21st and 22. A number of major actions were taken that will affect the way that the league approaches and enters the 21st century.

The biggest decision out of this meeting involves the terms of Division Directors and Vice Directors serve. Board members voted to institute three year terms for both positions in each division. It's a decision Southeastern Division Director Frank Butler, W4RH voted against.

"The thinking was that if you don't have to have an election every three years, there is some savings in postage and the labor involved with an election. You can't argue with saving money but I felt and some members might feel the three year term is too long." Frank Butler, N4RH

The terms presently last for two years. The new three year terms will start using a transition schedule beginning in 1998. In other league news, changes were also made to the operating procedures of the A.R.R.L. Awards Committee and Advisory Committees. Membership of the Awards Committee was reduced to six and an ad hoc committee has been formed to review the terms of reference and operating methods of all Advisory Committees. And the A.R.R.L. is getting into the RFI immunity testing of electronic gear. The Board directed that the staff create a plan, including a budget, for the creation of standardized RFI immunity testing procedures for consumer electronics equipment. In other news, the Board has declined to have the A.R.R.L. participate actively in the recently created corporation of volunteer examiner coordinators. On the other hand it has adopted

a resolution thanking NASA for its continued support of the SAREX program.
And before adjourning, the Board of Directors expressed its gratitude to recently retired President George S. Wilson, W4OYI, for his many years of dedicated service to the league and to the Amateur Radio Service. The Board of Directors bestowed on George the title of A.R.R.L. President Emeritus. An honor that he truly deserves.

Look for a complete wrap up on the boards decisions in the September issue of Q.S.T. magazine.

(*****
V.E.C. FUNDING

The F.C.C. will not permit the nations Volunteer Examination Coordinators to copyright the Amateur Radio testing question pool. The government agency says that the preparation of the question pools is a part of the volunteer activity expected of V.E.C.'s. For some time, the V.E.C.'s have been toying with the idea of copyrighting the question pool and then selling commercial publishers access to it. But speaking at the annual meeting of V.E.C.'s, the F.C.C.'s John B. Johnston, W3BE said that the entire purpose of the question pools is to inform examinees, examiners, educators, the amateur radio community and any other interested party as to exactly what a person has to know in order to obtain a ham radio license.
Copyrighting the pools says Johnson, would be fundamentally contrary to the Commission's goal of giving the public the best possible service at minimal cost.
Johnston said that there is one and only one source of funding available to those who function as Volunteer Examination Coordinators. That source of revenue is the testing fees paid by examinees. The dollar amount of those fees is tightly government controlled so as to preclude a V.E.C. from showing any profit from its testing operations and no other solicitation of funds is authorized under the V.E.C. system.
Johnston noted that the National Conference of Volunteer Examination Coordinators, an umbrella organization formed by the V.E.C.'s may collect dues from its members, but it is forbidden to do any other form of fund raising until and unless congress passes legislation to authorize other fund raising activities.

(*****
V.E.C.'s INCORPORATE

In a related story, the majority of the V.E.C.'s attending the conference voted to incorporate as a not for profit 501c3 organization. They will be known as the National Conference of Volunteer Examination Coordinators. As already noted, the A.R.R.L. has decided to not be a part of this new V.E.C. corporation.

It was also agreed that the group will seek additional funding from outside sources. This, to help finance the attendance of the smaller VEC's at the annual meeting.

(*****
RM-8626

Look for the F.C.C. to dismiss RM-8626 with little comment. Several sources close to the F.C.C. indicate to Newsline that the Commission is going to reject the petition filed by publisher Fred Maia, W5YI that asks severe limitations be set on high frequency bulletin station operations.
Only a tiny handful of hams filed in favor of Maia's idea. Well over five hundred commenters filing in opposition said that they favor increased selective enforcement action against those few bulletin stations the Amateur Radio community deems inappropriate to be on the air. This, as an alternative to Maia's suggested all out ban.
The only problem with selective enforcement is that it would be constitutionally non-valid if based on what ham radio operators want or do not want another ham to say. The only criteria permitted the F.C.C. for issuing fines or pulling licenses is direct proven violation of the Part 97 rules.

(*****
INDECENCY WIN

The federal government won yet another legal victory in efforts to keep legally indecent programs away from children. In a 2 to 1 decision Tuesday July 18th, the U.S. Court of Appeals for the District of Columbia found that the Federal Communications Commission's policy of fining stations for violating indecency standards is fully constitutional.
The FCC has 84 cases pending involving allegedly indecent broadcasts. The decision comes less than one month after the same court broadened federal power to limit the hours of indecent programs. It means that a lot of broadcasters will soon be getting notices of very heavy fines for violating the F.C.C.'s rules on indecent language. More important for us, it sets the stage for similar punitive action to begin in other services, including Amateur Radio.

(*****
GUNMAN KILLS THREE CALIFORNIA HAMS

An allegedly disgruntled Los Angeles city employee went on a shooting rampage at a downtown office building on Wednesday July 19th, killing four of his supervisors, three of them licensed radio amateurs. The suspect, identified by police as 42 year old Willie Woods, apparently believed he was about to be fired from his job as an installer of fire department radios.
The victims, all longtime employees of the city's Department of

General Services, were identified as Anthony Gain, W6KFN; Neil Carpenter, KA6QIB; Marty Wakefield, N6BZ and non-ham James Walton. One man died at the scene. Another was pronounced dead on arrival at the Los Angeles County U.S.C. Medical Center. Two others died at the hospital despite efforts to revive them.

(*****
SEDSAT UPDATE

Turning to news from the Amateur Radio space program, we have several items. First, Dennis Wingo, KD4ETA, the project manager for the SEDSAT 1 experimental satellite reports from Huntsville that the satellite and its support program is doing fine right now. Wingo says that he has two graduate students and six undergraduate students working on the project full time. He also has two PHD level professors given to us for the summer to help in getting our experiments together.
KD4ETA adds that the group is expecting delivery of its Mode L transponder shortly and will put it on the air locally for use in test mode for high data rate communications.
SEDSAT One is currently on manifest for a July 17, 1997 launch. This from the space shuttle during the STS 85-flight.

(*****
CALL SIGNS TO FLY ON PHASE-3D

Ron Broadbent, G3AAJ, Honorable Secretary of AMSAT-UK, has announced the formation of a program whereby individuals making a donation of 150 Pounds Sterling or more to the AMSAT-UK Phase 3D Fund will have their personal names and call signs placed in the spacecraft prior to its launch in 1996.
Similarly, commercial, governmental or trade organizations will have their names inscribed in the satellite for a donation of 2000 Pounds Sterling or more under the same program.
Ron's idea has been enthusiastically endorsed by key members of the Phase 3D International Project Team.
G3AAJ also reports he is now beginning to receive donations from participants wishing to take part in the program.

(*****
AMSAT NEWS SERVICE NEEDS HELP

The AMSAT News Service needs your help! The service is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this weekly bulletin, please send your observations to WD0HHU at his Compuserve address of 70524,2272 or on the internet at wd0hhu@amsat.org.

(*****
SINGLE DAY CONVENTION TREND GROWING

Look for more and more ham radio conventions become one day events. A recent issue of the Repeater Journal, a publication of the SouthEastern Repeater Association says that there appears to be a major shift toward downsizing large and mid-sized conventions and hamfests from two and three day events into single day affairs.
Repeater Journal says that attendance patterns in the South Eastern United States having changed over the past five years. The vast majority of those in attendance show up on opening day with fewer than 10% coming the second or third day. As a result, many show planners have decided to cut back their shows into single day high volume events.
It will be interesting to see if the trend toward the consolidation of ham radio conventions to single day events becomes a national fad. Also, what will be the reaction of the Amateur Radio supply industry may of whom fly 1500 to 3000 miles to a show. Will they still be willing to attend a convention that only provides eight to ten hours for exhibiting and sales?

(*****
HAM RADIO - GERMANY

While attendance at ham conventions in the United States may be dwindling, the same is not true overseas. The proof? Official figures just out say that twenty-one thousand hams attended this years Ham Radio Convention in Friedrichshafen, Germany. The three day event which is sponsored by the Deutscher Amateur Radio Club was up a several percent over the number of hams that showed up in 1984.

(*****
SOCAL INET

Hams in the Los Angeles area can find Internet information on the Internet Roundtable Net. This is a net held every Tuesday, 8:30 pm on the 146.925 MHz Santiago Peak repeater. Topics discussed include the World Wide Web, e-mail, gateways, and Internet Phone. Internet Phone is a new way of communicating by voice over the Internet without the use of long distance phone lines.

(*****
RDG-WWW

If you have an Internet World Wide Web viewer, be sure to check the new Radio Design Group World Wide Web Service. The Radio Design Group Web Page is the creation of Westlink Radio Network founder and Newsline Northwest bureau chief Jim Hendershot, WA6VQP. Contact Jim at his callbook address to obtain the Universal Source Locator for his internet locator.

(*****
CHAVERIM MEET

The Western USA and Mexico chapter of the Chaverim will hold its annual meeting in Las Vegas, Nevada's Riviera Hotel from December 15th to the 18th. Chaverim is the Hebrew word for friend. The Chaverim organization was founded by the late Hal Crystal, K2BYB as a way of promoting closer ties between Jewish hams and their friends here in the United States to the Amateur Radio community in Israel. Those interested in attending the Western U.S.A. and Mexico Chaverim meeting should contact K6AIZ via packet radio at WB6WFH or direct to his callbook address.

(*****
DX 6M

In DX, 9H5EE reports another major 6 meter opening across the Atlantic ocean. The second one in his log for this year. John says that he worked WA1OUB from FN43 was around 50.115 in early July. He also heard WA3TBG at about the same time. Six meter enthusiasts say its a bang up year for DXing that band, even for a 9H station with 25 watts into a 3 element beam.

(******
WA6HMC VS BANK OF AMERICA

A Canyon Country California ham, angered by an allegedly deceptive call left on his answering machine by a telemarketer for the Bank of America has won a substantial award after taking his case into court. Robert Arkow, WA6HMC, is a member of a group called Private Citizen, Incorporated. Private Citizen is a nationwide organization that opposes unsolicited telemarketing phone calls. Arkow filed his law suit in February of 1994 after entering into a loan in which he included a do not solicit rider in the contract.

"I received a telephone call indicating that a gentleman from the Palmdale Branch, named Jason, wanted to talk to me. It was my local branch at the time regarding my savings account. When I called back I got a voice mail. Then I called the branch and found that Jason wasn't there. Later on I tracked him down and found he was in another city over a 100 miles away and he was really telemarketing me for investment services." Robert Arkow, WA6HMC

The suit was adjudicated last month. Arkow's action claimed breach of contract and violation of F.C.C. rules. The lawsuit asked $500 for breach of contract, $500 for failure to provide a written do not call policy and $1000 in punitive damages. This because the message left on his answering machine implied there were problems with his bank account causing him unnecessary worry. In its defense, the bank maintained that this was a courtesy call to Arkow. The judge however found that the bank had actually violated two F.C.C. rules and awarded Arkow $1000.
WA6HMC says he is happy with the way things worked out so far, but he is still waiting to hear from the F.C.C.:

"Well what disturbs me is that a spokesman for the bank made a statement in a local paper saying that we are not going to change our policy and yet a complaint filed with the F.C.C. regarding this has seen any action.
I as a ham find it uniquely interesting that we can't get F.C.C. action against a major bank for violating F.C.C. rules and invading the privacy of thousands of its customers. We are always told they are too busy with other things. I work in the commercial two way radio business and we can't get them to respond to problems there. I'm a ham and we can't get them to respond to problems in the amateur bands and now we can't get them to respond when thousands of our phones being invaded with deceptive messages." WA6HMC

Sound familiar?

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

Before we go, a word of congratulations to some very close friends of Newsline. To Charlie Gilliland, WA0KDC and his wife Judy on the marriage of their daughter Cathy, KB0FDU to Mr. Stephen Lentz on Saturday July 22nd. As regular listeners know, Cathy who is 18 is the co-host of the upcoming ham radio promotional video Always on the Air.
Please join with us in wishing the newlyweds many decades of joy and happiness together. Congratulatory cards can be sent to Cathy and Stephen at Cathy's Callbook address.

See the latest ARRR handbook

Don't go below 1.1 volts per cell
"A dead NI-Cat Cell will always remember when it is dead"
That is about the only memory a CELL has.
A battery (which is a group of cell) has other problems.

1916. How did someone transmit on two freqs at once...?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-30 00:00:00 UTC
From: davidf@alumni.EECS.Berkeley.EDU
Message-ID: <3vg1h0$g2h@alumni.EECS.Berkeley.EDU>
Source record: 241470

Over the last two evenings, my department has experienced a problem with an unlicensed operator transmitting on one of the Police Department frequencies we monitor by contract for a seperate department. Friday night, the operator began transmitting a variety of messages, and was ultimately given the FCC "textbook" warning. The operator returned to the air last night, and as the FCC began attempts to triangulate to locate the operator, we decided to take operations to our auxiliary frequency, intended for business transmissions. It turned out the operator was transmitting on both freqs at the same time.

Now, I know that the 'obvious' way to do this would be to have two radios, one set on each freq, and key them both up while you talk. But I have been searching to find anyplace that the secondary frequency is listed, and I can't! It's not listed in Police Call or any other scanner freq listing I can find... (Well, it is listed, but only as assigned to other agencies... We do have the transmitter and frequency assignment license in our station, though).

Is there some way an operator could modify a radio so it would transmit on both freqs at once? (Note that the freqs are in the 141 and 145 range, so it's not bleedover...)

The operator has committed several felonies (including bomb threats against my dispatcher and another local high school) as well as transmitting on a police frequency, in violation of Title 47, USC. Anyone who can help me understand HOW this person is operating will be helping me STOP this person from operating.

Thanks,

Dave Friedman, A-6

Check grounding of radio. If mounted to metal bracket in car, you should 90% of the problem solved. If mounted to plastic dash or Velcro'd to
console , etc. run a good ground strap. A thru the glass antenna had
minimal grounding also. The better the radio ground the less RF floats
inside the car. Hope this helps somewhat.

Just wanted to bounce these ideas off the readers of this newsgroup and get some input.

1) Get an old Motorola Minitor pager (or something similar) crystal it to the freq of a local repeater (preferably with reverse autopatch) - and allow people to access the repeater, dial in DTMF tomes to activate the pager, and then leave mesages for me. Anyone tried that?

2) Get an adapter that allows people to play CD players through a car's audio system (via the tape deck) and use that for my HT when I'm in the car. My car has a lot of road noise, and I'd like to be able to hear the radio through the car's audio system if possible. I would like to here what people here have to say before I go out and buy one, only to find that it wont work.

Thanx in advance...

: : jcumming@dgim.doc.ca (Jim Cummings) writes...
: : Therefore, those claiming that CW is technically superior to digital
: : communications are petulant, if not ignorant.

: : Nobody is claiming CW is technically superior.

Jim wrote:
: On the contrary, that is often claimed by those who are pro-CW. Just
: re-read the above quote from Brown.

Follow your own advice, Jim. Go ahead, re-read "Brown's" quote. I
don't know about your neck of the woods, but around here "nah" means
"no". My comment "Technical superiority? Nah." referred to Morse, Jim.
That seemed to be fairly obvious.

Tom wrote:
: : We're trying to get the point
: : across that for communicating with the majority of real HF stations, that exist
: : and are operating NOW, CW beats the only other mode available to the majority
: : of real HF stations.

Jim wrote:
: It is a rather trivial to say if I only have CW and SSB, that CW is the
: superior mode. If that is your only criteria with what one has at hand,
: there is no arguement.

Thank you, Jim. You do get the point, however you still seem to fail
to understand the significance. It is hardly "trivial". It is at the
core of one of the purposes of Amateur Radio.

: However, that has not been the thread of these
: discussions. The thread has been an discussion of the superiority of one
: mode over the other. The fact that you or I or anyone else does not have
: the capability to use that mode is irrelevant to the discussion.

Actually, the discussion of pure technical superiority is irrelevant.
While it may be of interest to you, I doubt seriously if those who
actually maintain the requirement for Morse (ITU and signitory
governments) do so because Morse is or is not technically superior. I
doubt you'll find the topic even discussed in that forum.

Tom wrote:
: : The fancy digital mode mentioned in the referenced article is nice, and I don't
: : doubt its conclusions whatsoever. But if you'd like to make real contacts with
: : real stations, 99.9% of whom don't run that fancy digital mode, you have two
: : modes to choose from: SSB and CW.

Jim responds:
: Again, you are bringing in factors to the discussion that are hardly
: relevant.

Hardly relevant? The ability to communicate with other hams is
irrelevant to Amateur Radio?

: Indeed, if I have Amtor capabilities, and you do not, then we
: will be unable to communciate in that mode. Although you may believe
: that CW is superior, because you have no experience with digital modes,
: you are entitled to your beliefs, but your beliefs have little bearing
: which mode is superior.

And which mode is technically "superior" has little (if any) bearing
on why Morse is required. But if it will make you happy, Jim, with
apologies to "The Wrath of Khan", I'll say it. (In this scene, Jim
will be played by Ricardo Montalban, I will be played by some no-name
minion about to become a silent key...with my last breath):
"Yours...is the superior...mode..."

By the way, isn't that a plastic chest you're pounding, Ricardo?

1928. Free - Mac Ham Test Simulators +

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-30 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-3007950602430001@wd1v.mv.com>
Source record: 241482

The new Macintosh Ham Test Simulators are HERE!

Novice Ham Test 5.0 SA.sea
Technician Ham Test 5.0 SA.sea
General Ham Test 5.0 SA.sea
Advanced Ham Test 5.0 SA.sea
Extra Ham Test 5.0 SA.sea

The latest versions feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
the need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version 5 Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals written by Diana, KC1SP.

You may obtain a Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk
mailer for the return.

Each Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included are a collection of text files that relate an
interesting variety of ideas about the best way to study CW and
prepare for tests.

If you load these onto file servers where others can gain access
via Internet, please let me know so we can point others in that
direction.

Your comments and suggestions for future versions are always
welcome. Stay in touch and good luck with your next test!

73,

: communications: you are wasting your time. Emergency communications is
: already provided by many other groups, including the american red cross.
: Yes, the ARC was granted use of 220-223 MC by the FCC for their
: emergency communications use.

Yeah right.

Having permission to operate in a given band segment doesn't mean
that ARC has the equipment deployed, or the operators for same.

Last I spoke with the head of the ARC's communications operation
amateur radio figured quite prominently in their future plans, and
I'd guess that it'll stay that way.

Simple fact in the SF bay area anyway is that ARC is still using
the old VHF single channel gear, and actually doesn't try to
use this hardware at all during real emergencies since there are
several different regions within VHF range of each other. ARES/RACEs
IS the communications branch of the local chapter around here and
is depended upon heavily by same.

Steve Wilson KA6S

: Their attorney who petitioned the FCC is
: also the ARRL General Counsel in WASHINGTON DC. Most of the members
: belonging to these groups ARES/RACES are bored, lonely people with no
: social ties, the remainder are CONTROL FREAKS, people that want to do
: ONLY THEIR WAY. Just read the packet messages that come out of
: California regarding this topic, and judge for yourself

So you are judging every amateur in the largest state in the union
by the propaganda coming from essentially from one person! This also
implies I should judge every amateur in 1 land by the
nonsense you put out... I don't think so. Hey Burt...why don't you
try and get active and help people in a constructive way instead
of sitting back on your laurels and taking pot-shots at people who

are trying to make a difference. The kind of postings you are famous for serves nothing but your own ego at considerable expense to others.

1935. RF/Coax Relay Design ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-31 00:00:00 UTC
From: molson@cray.com
Message-ID: <1995Jul31.153648.20320@ned.cray.com>
Source record: 241239

Can anyone out there help me find out what makes a RF relay, a Rf relay?

My understanding of the design so far is that an RF relay has either the contacts enclosed (shielded) or that the coil is shielded from the contacts.

I would like to learn the design parameters of Rf/Coax relays for use at VHF and UHF frequencies, and possibly build a few.

Any help would be appreciated, especially a pointer to some reference books.

Thanks in advance!

Mark Olson N9LTJ

The output of the NC-28B wall wart charger that came with the stock
battery is 8.7 volts. This should give you a clue as to why you could be
having problems charging a 12 volt battery with it... ;-)

Hook the pack up to the right charger and see what happens.

Mods are

cut CR1, CR2, CR403. Cut the receive antenna loose from the
antenna relay and install a bulkhead-mount BNC connector for it
either above the short can on the side of the receiver about 1.5"
back from the antenna relay, or on the underside of the lid
(less desireable as it make servicing harder).

While you're at it, drill a hole in the handle so you can push
the lid release button without having to unlock the radio and
drop it off the mounting tray.

Manual:
the schematics are large foldouts and the board layouts are
multicolour with greyscreen printing. They don't Xerox worth
a damn. The manual is like $35 from Motorola. I won't give
you their 800 number, I promise.

: The problem with using aesthetics to determine "rights" is what
: principals do you apply to determine the extent to which aesthetics
: can be imposed?
I didn't say that aesthetics should be used to determine "rights". In
fact, I believe that the constitution is very clear on what determines
rights. And there is no right (as enumerated by the constitution and
upheld by many levels of courts) to build a radio tower in your backyard.

: I find bell bottom jeans unaesthetic. Does that
: mean it is reasonable to write a CC&R that prohibits bell bottoms?

Absolutely. And I'd vote for it (the bell-bottom prohibition) at your
local neighborhood association meeting (if I lived there)! :-).

: > Aesthetics are NOT nonsense. The aesthetic sensibility is probably the
: > only thing that is uniquely human. In denying aesthetics, you are denying
: > your own humanity. Go back to the jungle and live with your ape cousins,
: > Monkey-Boy - they won't care if you build a tower.

: The only thing that is uniquely human? What a stretch. For someone that
: claims to do object analysis and design, you have an amazing ability to
: exclude relevent domains from your analysis. If aesthetics were so unique
: and important, why didn't our founding fathers feel the need to protect
: them in the Constitution? Because aesthetic arguments subject one to
: the whims of those in power. Perhaps that's why they felt the need to
: explicitly spell out a long list of rights that are inalieable. They defined and
: used a set of principles to make those decisions instead of popular fashion
: which is generally all aesthetic arguments often amount to.

Again, seem to think the issue is rights, which I have not commented on. I
do believe that people have rights (I just don't think that the erection of
huge metal structures is one of them). I am referring to humanity which is
a completely orthogonal issue. A dog which you own has a right by law not
to be maltreated by you, nonetheless, it is not a human. What would you
regard as a milestone for humanity, if not aesthetic sensibility? In the
past, people have plausited language (probably not true as shown by teaching
apes to use ASL), intelligence (obvious disproven by entities such as Con-
gressmen and the average Usenet poster :-), tool use (probably not true as
primitive tool use in chimps has been proven in behavioral experiments), a

soul (an interesting concept, but hardly one which can be proven), and so
forth...

: PS "Monkey-Boy"? How cute. Would you like to insult my mother while
: you're at it?
OOOH!!! Can I, can I???

: Or perhaps you'd like to have your father beat up
: my father?
Nah, I'd rather have my mother beat up your mother!

: Good grief! I find your aesthetically displeasing, perhaps
: you should be tried for that and executed. ;-)
Even though I do believe that people have the right to prevent major
aesthetic offenses, I do not believe that it should be a capital crime
(else I would have been deceased long ago :-). On the other hand,
public taunting is usually a good enough penalty...

Curtis,

You are living in a dream land. (or rather...California ;-)

California has a full disclosure law NOW. They didn't 10 years or
so ago when I bought my house in the San Jose area! This law
isn't universal either. You won't necessarily get the same treatment
in other states.

The other simple fact that you are ignoring is that Real Estate
agents are of the same ilk as used-car salesmen! (and me doing
this after yelling at Burt Fisher to stop painting all CA hams
active in RACES/ARES with the same brush ;-)

I'm afraid that you'll find that Jack's point of view comes
closer to representing reality in most states.

>
>Can anyone shed some light on this?

I am not familiar with the W&W equipment, but if your charger is meant to charge 7.5V batteries, that could be the problem. You can't charge a 12-13.8V battery with a 7-8V charger. Plain and simple, the electrons won't go the right way.

You could have a damaged cell. Even with a proper charger, a damaged cell can result in lost capacity. Look at the battery terminal voltage under load (TX) - lower than rated voltage under load can indicate shorted one or more shorted cells. You can also check the voltage on the terminals at the end of a charging cycle (while the battery is still in the charger) - A good 12-13.8 volt battery may normally show 14 or 15 volts after charging (still in the charger). A battery with a vented cell might show abnormally high volatge, like 17 or 18 volts while still in the charger.

If the cells are damaged by venting or complete reversal, the battery needs to be replaced.

One thing to note about battery care. Gary brought this up in a previous post and it is worth repeating...MEMORY IS A MYTH. You do not have to completely discharge a battery to maintain capacity. In fact, deep discharges (to less than 1V per cell) can ruin your battery. Most problems are usually due to undercharging or continuously overcharging. Most batteries are pretty tolerant to some overcharging but it is not advisable to leave batteries on trickle charge for longer than the recommended charge time.

Actually Jason my call book shows that you are a no coder. Now I
don't think that brands you as stupid but you seem to think so by
the above remarks. If you would like I can provide you with the calls
of a dozen no code PhDs.

yes there are quite a few lid no coders that just wanted something to
> add to their cb equpiment but tthen there are radio tech , computer
programmers
> and other intelligent people (mostly in elctronics fields) that know what
they
> are

There you go again now no coders are lids. Have you passed the code
recently? Why the hostility?

A number of people on this news group tend to make a very firm statement
about HTX-202 mods because people have a tendency to believe what they
want to believe and will take a pot like yours seriously. Someone who
knows little about the innards of an HT could trash his radio from
your post.

> doing. You can't stereo type a group like that...
>
> Why do you think it is called bgus htx 202 mod?

I think most of us recognized the mod file as a put on but why post
it at all?

>>else) do when we're unsure and about to operate? Look at a chart!
>Russ KI7FL

I suspect that those questions are there for the simple reason
that it is thereby drilled into you that there are indeed different
freqs for different license classes. I had to learn a lot of
e.g. mathematical tricks for solving equations when I was a spotty
youth, and while I can't remember them all now, at least I'm aware
that they exist and I know vaguely where to look to find them when
I need them.

Without having gone through the tedium of learning or memorizing
the frequencies, a new op might well get on the air and start
transmitting wherever he or she feels like it.

One of several good reasons for being Extra class is that the
frequencies are much easier to remember - 14000, 21000, 7000 and
so on.....

> > 73 and live better digitally
> Are you STILL defending your anti-CW beliefs

Jeez, enough already. Is there a Coke versus Pepsi newsgroup somewhere? You guys can each take a side (ie. Coke is CW and Pepsi is SSB) and then argue to your hearts.content. It never ceases to amaze me that a lot of pepople never realize that different people do different things for their own various reasons. But as soon as they choose to do whatever that activity automatically becomes the best and those who aren't doing that activity are somehow misguided or worse. There are Coke drinkers and there are Pepsi drinkers and there are people who enjoy both. It is the same with CW and SSB or digital or whatever. To hear about it ad nauseum doesn't do anything for either side and turns off people. I'm sure there are a lot of non-hams out there lurking because they are interested in ham radio. CW vs SSB isn't what ham radio is about. Don't give them a false impression of our great hobby. Give it a break.

P.S. This is a general statement and not pointed at you two gentlemen in particular.

Hmmm.... have you taken a close look at your comm system design? Is it possible you've got a forgotten repeater sitting around somewhere that only keys up when a particular PL is being squawked and your normal radios don't have PL enabled?

>>-We do have the transmitter and frequency assignment license in our station,

If you've got an FCC license for the unused frequency, it should be in the license database. The perp may have searched by name for all assignments to your department without regard to which assignments are in use.

The FREE Icom charts are great to help you find out where you should,and should not, be on the bands. Any Ham shop has 1000's of them to give away ! BE RESPONSIBLE !!! I just passed my 5wpm CW test & would not think about going to places on the bands I should not be. I haven't earned those priveledges yet.

1958. Anyone try LogWindows or Pakratt/Win?

Newsgroup: rec.radio.amateur.misc

Has anyone tried the latest versions of either LogWindows or PC Pakratt for Windows, both from AEA?

I've seen a few reviews, which seemed positive, but I'd like some more input from anyone who's use either or both packages.

Thanks!

Joe, KQ3F

I don't have the schematic handy (otherwise I could figure it out), I need the location of test points TP2, TP3 and TP4. I did the MRF477 Mod, but no schematic handy. This is to adjust the idle, etc of the new final.

I think they are the points with the PCB shorting bar, but which is which?

2 3 4 ?
| | |

Only (on the rf/modulation PCB) TP I found marked was TP5.

This is to introduce Don Root, the Communications Coordinator for the OES Coastal Region (Monterey to Oregon border.) Don replaces Art Botterell, who moved to a position with FEMA.

Before this assignment Don was with the Headquarters staff as the Digital Systems Specialist. Prior to that he was Communications Coordinator for State OES Southern Region (Los Angeles, etc).

Don is a longtime FCC licensed Radio Amateur (WB6UCK) and is one of the original supporters of the state ACS program. For years he was on the Southern California Frequency Coordination Council. He is Past President of the California Public Safety Radio Association chapter of the international APCO

>From OES Headquarters Stan Harter and Cary Mangum will be working with Don in strengthening (or building as appropriate) ACS/RACES organizations such as exist in other State Mutual Aid Regions; both at the county levels and in support of the Oakland facility.

The new Oakland OES facility (which replaced Pleasanton and is upgraded) will support extended ACS/RACES activities as part of the new Coastal Region Emergency Operations Center.

Applications are now solicited for ACS/RACES Radio Officers and other volunteer staff positions with the State OES Coastal Region Because of the size of the OES coastal region (Monterey to the Oregon border, it will be an administrative challenge that requires skills in management. Those with this interest are particularly solicited. A radio licens is NOT required, although definitely preferred for the position, as people-skill is more important than technical ability for a Radio Officer in today's government relationship.

As Don is occupied with this installation, all queries should be addressed to either Stan or Cary: 916-262-1603 (Stan) or 916-262-1670 (Cary) or via intermail: seh@oes.ca.gov or crm@oes.ca.gov.

Welcome, Don Root, to the California OES Coastal Region.

By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 389 - For Release 7/31/95
MGT - Volunteers- Images & Issues 2/7

In one emergency management agency, the development of policy on use of volunteers was assigned to a staff person. However, in ten years nothing was really accomplished, primarily because the input of those directly involved with volunteers was never obtained. Eventually, a planner was assigned the same project and again it languished due to overload and other priorities. The agency had a highly qualified volunteer manager who could have brought the project to culmination in short order but was not given that opportunity -- or even consulted. That agency's "volunteer policy" still languishes in a never-never land; a situation not unusual for government.

A major issue (or hurdle) in government is this: "Why should I even consider the use of volunteers?" To that the best response we know is this: "Because, when done with an understanding of the right program, it can PROVIDE YOU WITH BENEFITS you cannot obtain otherwise -- significant and rewarding benefits." [Explanation to follow.]

Another issue in government is the reluctance to deal with volunteers. In some areas there is a notion that you have to baby volunteers, go to great lengths not to offend them or some how relate to a volunteer differently than you do with an employee. However, THAT IS NOT SO! [Explanation will follow.]

A related concept in the minds of many government managers is that they cannot possibly take on another program or a bunch of people because they are already overloaded and overworked. Some even think that they personally have to deal with 15, 50 or 150 volunteers, attend meetings and spend time they simply do not have available. Again: THAT IS NOT SO! [An explanation will follow.]

How very true, Gary. GPS uses a air of signals in quadrature PSK configuration
on the same carrier at 1575.42MHz. The C/A signal has a 2MHz bandwidth due to
its 1Mhz (ok 1.023MHz minus a relativistic tad) "chipping rate." The P code has
a 10MHz chipping rate and is some 20Mhz wide. No scanners *I* know of have
bandwidths like that anywhere south of the first conversion. Without *VERY*
heavy modifications he'd not hear anything recognizeable. And even WITH
conversions all he'd hear would be 50Hz digital almanac and health information.

Since the antenna will not be transmitting, exact length is not
supercritical. I am guessing you have a bunch of #12 THHN on hand and
this will serve the purpose just fine. Cut a length about 32 feet long
and you should hear just fine.

Great work on passing the 5 WPM !!! I remember the joy and satisfaction
you are feeling now Buddy!

Subject: HERE'SWHATWETOLD'EM

Here's what we told our VEs:

Volume Ten July, 1995

Number Four

Now that the FCC's database reflects "Technician Plus" as a separate class of license, and the published databases are reflecting the "P" class, it becomes apparent there are many more errors than either the FCC or we can comfortably abide. WCARS/VEC has offered to help correct the errors of differentiation between "T" and "P" The offer was verbally accepted by the Chief of the Licensing Division, FCC, Gettysburg.

There will be no charge for the service, nor will we transmit an E-Mail message for the purpose of a correction alone, but will include it in the next data file going up the pipeline.

We will need a completed and signed FCC form 610 [November 1993 only] marked for purpose 4B, a copy of present license, and the necessary documentation to prove credit for 5 WPM. DO NOT list them on the session summary, and DO NOT HAVE VE SIGNATURES on that 610. IT IS NOT part of a test session, although it can be physically included in the same envelope as the paperwork of a session. If you do it that way, turn it reverse to the other forms, or in some manner alert us to the fact that it is different.

We want undisputable documentation of the Tech Plus standing. We will accept this documentation directly from the licensee or through a VE team. The reverse of this page is an advertisement that will replace the one we have run for several issues in the Repeater Journal, starting with the August issue. Although not mentioned in the ad, of course a Novice license of the same call sign and name of licensee will serve quite adequately as

documentation. One thing we are quite particular about is that we will not recognize a copy of a CSCE unless one of our people COMPARES THE ORIGINAL. We have had too many problems in the past with changed photocopies to take the risk in a maneuver that would be most difficult to reverse should we let one slip past us.

If the licensee asks you to handle the matter for him, if he should furnish a photocopy of a CSCE documenting credit for 5 WPM, WCARS/VEC will not process it unless the VE who accepts it writes "ORIGINAL COMPARED" and initials it ON THE FACE OF THE CSCE. If he sends the actual original, that is OK too.

The call sign itself can serve as documentation IF IT IS, OR IS IN THE SERIES OF AND BEFORE the last "Group C" call sign issued March 1, 1991. The codeless license was effective March 14, 1991. The last Group C calls issued March 1, 1991 are N0MWW, N1IJV, N2LPZ, N3IVB, ALL N4s, N5RZI, ALL N6s, N7QEI, N8NIS, N9KMA, KH0AM, KH2EW, KH3AE, KH4AE, KH6YH, KH7AA, KH8AI, KH9AE, NL7VY and NP2EC.

We also know there are some that show in the database as "P" when they should be "T" We are not going to handle a "downgrade" electronically, and will not handle it at all unless the LICENSEE, [and no one else] makes the approach and asks us to relay his request for correction. In that case, have the request put in letter form and send it to WCARS/VEC. Use due care so far as identification is concerned to ensure it is the licensee making the request. We will E-Mail it to Gettysburg for their handling.

WCARS/VEC WILL CORRECT T to P
if there is an error in FCC database

The Technician Plus (P) is now formally recognized as a separate class of license, and the VEC-maintained Tech-Plus database has been merged into the official FCC database of amateur licenses outstanding.

The FCC database was adjusted without issuing corrected licenses reflecting the Technician Plus class to those who in fact hold that class of license. DO NOT make the determination that the database is incorrect from the actual license you physically hold in your hand.

If you are now shown IN THE FCC DATABASE as a Technician and you can DOCUMENT that you should be Technician Plus, WCARS/VEC will correct the error for you. Send a completed and signed FCC form 610 (November 1993 ONLY) marked for purpose 4B together with the a copy of your present license and the original of the documentation (CSCE or written confirmation from the VEC that coordinated the session) to either of our coordinators listed below and we will be happy to include it in the next electronic file we transmit. If you wish the original of the documentation returned, also include

a copy of it for us to keep and an SASE for return of the original.
We MUST see the original of the documentation.

There is no charge for this service.

WE'RE STILL LOOKING FOR A FEW GOOD VE TEAMS!
==========
For your purposes, something like the below may be more
appropriate. You may edit this further if you feel it is
justified, just don't loose the concept that it is being offered as
a public service.
==========
Now that the FCC's database reflects "Technician Plus" as a
separate class of license, and the published databases are
reflecting the "P" class, it becomes apparent there are many more
errors than either the FCC or the amateur community can comfortably
abide. The Western Carolina Amateur Radio Society/VEC, Inc. has
offered to help correct the errors of differentiation between "T"
and "P"

There will be no charge for the service, nor will they transmit an
E-Mail message for the purpose of a correction alone, but will
include it in the next data file dispatched.

They will need a completed and signed FCC form 610 [November 1993
only] marked for purpose 4B, a copy of present license, and the
necessary documentation to prove credit for 5 WPM.

They want undisputable documentation of the Tech Plus standing, and
will accept this documentation directly from the licensee or
through any VE team of their appointment.

A public announcement follows this text. Although not mentioned in
the announcement, a Novice license of the same call sign and name
of licensee will serve quite adequately as documentation. One
thing they are quite particular about is that they will not
recognize a copy of a CSCE unless one of their people COMPARES THE
ORIGINAL. There have been too many problems in the past with

changed photocopies to take the risk in a maneuver that would be most difficult to reverse should they let one slip past.

A photocopy of a CSCE documenting credit for 5 WPM, WCARS/VEC will not be processed. If the licensee wishes to send the original for examination as well as a photocopy for their files and an SASE for return of the original CSCE, that will be done.

The call sign itself can serve as documentation IF IT IS, OR IS IN THE SERIES OF AND BEFORE the last "Group C" call sign issued March 1, 1991. The codeless license was effective March 14, 1991. The last Group C calls issued March 1, 1991 are N0MWW, N1IJV, N2LPZ, N3IVB, ALL N4s, N5RZI, ALL N6s, N7QEI, N8NIS, N9KMA, KH0AM, KH2EW, KH3AE, KH4AE, KH6YH, KH7AA, KH8AI, KH9AE, NL7VY and NP2EC.

It is also known there are some that show in the database as "P" when they should be "T" They are not going to handle a "downgrade" electronically, and will not handle it at all unless the LICENSEE, [and no one else] makes the approach and asks his request for correction be relayed.

WCARS/VEC WILL CORRECT T to P
if there is an error in FCC database

The Technician Plus (P) is now formally recognized as a separate class of license, and the VEC-maintained Tech-Plus database has been merged into the official FCC database of amateur licenses outstanding.

The FCC database was adjusted without issuing corrected licenses reflecting the Technician Plus class to those who in fact hold that class of license. DO NOT make the determination that the database is incorrect from the actual license you physically hold in your hand.

You have to understand that Mission Viejo is an extreme case. Only
001% of the US has laws forbidding parking on the street. Most of
the US is covered with cars, and they have to sit for 10-30 days
before they can be towed off.

Judging the US by the customs of Mission Viejo is like watching the OJ
trial and thinking we all have Kato type dudes with bitchin' hair
living in the guest house. It's true for a few people and that's why
we watch then on TV. Much more exciting than our own boring lives.

In article <3vg1h0$g2h@alumni.EECS.Berkeley.EDU> you write:
[A jammer on 2 public-service freqs at once]
Yep, he probably used two transmitters.

[How did he find the freqs?]
If it is not listed obviously in the FCC database, maybe he found it by
scanning around a previous time it was used, or by using a handheld frequency
counter near someone transmitting...

-We do have the transmitter and frequency assignment license in our station,
-though).
Could he have seen it on some visit there?

-(Note that the freqs are in the 141 and 145 range, so it's not bleedover...)
^^^
I sure hope that is a typo...

: >73 es tnx de kg9DE

: Don't know for sure that this will work, but I've been told by others
: that it does. There is a metallic "spray paint" available at
: electronic parts type stores. You can use this "paint" to coat the
: inside of the plastic monitor cover.

A few words of wisdom if you're going to try this. These conductive EMI sprays work because they contain very fine metal dust in along with the paint. BE SURE that you spray over the conductive paint with several coats of regular spray paint. This will prevent these little metal flakes from falling into/on the delicate electronics housed within.

Good luck!

Message-ID: <7935296002@inferno.com>
Source record: 241353

DA>Over the last two evenings, my department has experienced a problem with an
DA>unlicensed operator transmitting on one of the Police Department frequencies
DA>we monitor by contract for a seperate department. Friday night, the
DA>operator began transmitting a variety of messages, and was ultimately given
DA>the FCC "textbook" warning. The operator returned to the air last night,
DA>and as the FCC began attempts to triangulate to locate the operator, we
DA>decided to take operations to our auxiliary frequency, intended for business
DA>transmissions. It turned out the operator was transmitting on both freqs at
DA>the same time.

DA>Now, I know that the 'obvious' way to do this would be to have two radios,
DA>one set on each freq, and key them both up while you talk. But I have been
DA>searching to find anyplace that the secondary frequency is listed, and I
DA>can't! It's not listed in Police Call or any other scanner freq listing I
DA>can find... (Well, it is listed, but only as assigned to other agencies...
DA>We do have the transmitter and frequency assignment license in our station,
DA>though).

DA>Is there some way an operator could modify a radio so it would transmit on
DA>both freqs at once? (Note that the freqs are in the 141 and 145 range, so
DA>it's not bleedover...)

DA>The operator has committed several felonies (including bomb threats against
DA>my dispatcher and another local high school) as well as transmitting on a
DA>police frequency, in violation of Title 47, USC. Anyone who can help me
DA>understand HOW this person is operating will be helping me STOP this person
DA>from operating.

DA>Thanks,

DA>Dave Friedman, A-6
DA>California State University Police Department
DA>Cailfornia State Polytechnic University, Pomona
DA>davidf@alumni.eecs.berkeley.edu

dave, you still haven't stated why you are so certain that the person
isn't using two radios at once. all you have stated is that the second
frequency is not listed in a frequency guide. this does not guarantee
that the culprit would have no way of knowing it. anybody that sits
around and jams a communications service certainly has some time on
their hands, which just says to me that this person must have stumbled
across your department's secondary frequency while searching the band.
this brings us back to the first conclusion you drew, which was that the
jammer could be using two radios at once, and i see this to be true.

now, as far as finding the bastard, it'll take some work. is your radio system simplex or a repeater system? does it have only one transmitter/receiver for the base or is it a multiple site voted system with microwave links to the control station. is this a high-level site or low level?

i'd love to help you (i'd even drive down, it'd give me some entertainment to catch the bastard!), but unless you can provide some better information than what you have, we're back to square one.

good luck

greg

1983. ### I need info/mods on Kenwood TH-22AT Handhelds

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-31 00:00:00 UTC
From: 93102208@comet.np.ac.sg
Message-ID: <3vir8f$3i1@comet.np.ac.sg>
Source record: 241355
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm interested in purchasing a TH-22AT, however, silly as this may sound, I need mods for it.

I need to restrict it to RX and TX from 144-146 -ONLY-. It's a requirement by our licencing here (Singapore) before the equiptment can be 'type approved'. Long story, I shan't go into it.

Preferably, a mod that can be reversed.

Oh yes, I'd also like the mods for expanded RX/TX if any are available, and if there are any keypad mods/tricks.

This is posted to r.r.swap as I'd like to know if there are any technical manuals or the like for the TH-22AT where I can purchase to help me figure out how to restrict the RX/TX if possible.

Alternatively, anyone knows of any nice HTs that can be restricted to 100% TX/RX from 144-146 only?

Thanks for any info.

1984. ### I want info/mods/used HTX202 Handheld

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-31 00:00:00 UTC
From: 93102208@comet.np.ac.sg
Message-ID: <3vis4d$3vm@comet.np.ac.sg>
Source record: 241356
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.misc

I'm looking for a 2nd hand HTX-202, I'm on a tight budget, but if you've got one to let go off, email me, and let me know how much you're willing to part from it.

The info I require on the HTX-202 is what is the TX/RX range. I've been reading thru my old collection of texts on the unit, and it just keeps mentioning RX in the ham bands. Is it safe for me to assume it RX strictly from 144-148 only?

If I need to mod it to RX/TX from 144-146 only, how can I go about doing this? Anyone out there can help advise?

In one of the old posts I was reading regarding the HTX-202, it had a para that read:

"Repeater offset can be adjusted from 0 to 4 MHz in steps as set
by the scan frequency step selection (5, 10, 20, 25, 50 or 100
KHz)."

I don't understand this. 8(- Perhaps I'm just not familar with the terms. What does it mean?

Thanks for any info provided... Email response is prefered.

Rgds!

Ed, 9V1ZY.

Silent key

Silent key -- Mal VK2VEU

It is with sincere remorse today that I have to advise you of the passing of a friend and fellow amateur,Mr.Mal Charrington VK2VEU. Mal died yesterday (28th July) after suffering a massive heart attack at his home - he was aged only 54.

Mal and I had been associated for a period of twenty years and over this period of time we shared many hours of fun, laughter, truths and frustrations. He was a man who believed in what he was doing, he held with great value his pride, his honour, and his integrity. Mal always believed that his handshake was a contract.

Sadly today although rarely admitted these values seem lost. Mal lived at Riverstone with his closest friends Don Cross VK2EYI and Don's wife Marie Cross - these two people were to Mal his life. Mal's constant quest was to make sure that Don or Marie wanted for nothing, for the past twenty years Mal pursued the challenge of amateur radio with his friend Don. He seemed relentless in his efforts to assist Don with the erection of many towers and antenna systems his primary goal was to give his mate the best that he could offer. Mal rarely considered himself and I believe that he simply saw Don and Marie as his life. I would not profess to understand the loss that they must feel but I do know that Mal will always be with them.

Words never seem to be sufficient when trying to express one's feelings about someone that they have loved and lost, and I am at a loss to try so I will simply say that I hope that he has found peace and the memories of his friendship will remain with me for the rest of my life.

73s Mal ...

from Bill Brodie

President's note: Mal Charrington was a particular friend of mine. Mal was employed for many years by Marr Communications of Sunnyholt Road Blacktown. He will be remembered by his many customers as that portly chap with the infectious smile ever willing to help. He always gave more than was required. Mal was a typical Australian. He would give you the shirt off his back .... even if he did not have one. I for one will miss him immensely ... (from Mike Corbin)

Funeral arrangements will be announced in the press.

Callbook closing call

Call book entries closing

This is a further reminder to the repeater groups and club officials that the input to the repeater listings in the next edition of the Australian Call Book close at the end of July.

If your club's entries were incorrect in the last edition, were not included or you have had changes or editions this year then you need to advise the FTAC committee without delay. There is not the time to pass this information through the NTAC committee so you need to mail or FAX the changes direct to:-

The Chairman
Federal Technical Advisory Committee
P.O. Box 2175
Caulfield Junction Vic 3161

or by Fax to:
03 9523 8191

Deadline 31st July 1995.

VK2 WICEN News

WICEN News

There are, or were, many events today; the Yengo Horse Enduro, run by Alan Whitmore VK2YYJ, and also the State Annual General Meeting, at Hornsby RSL Club, starting at 11am; we will have details of the AGM next week (these are usually rather quiet affairs), along with the result of the Deputy State Coordinator (2) vacancy. There is also the WIA Trash and Treasure Sale and the WIA Federal Convention (held in Sydney this time).

The next major event is the annual City to Surf Fun Run, on 13th August, for which David Shaw VK2TIP is the event commander. He needs quite a number of people for this race, and he can be contacted at home on (02) 588-5061 or at work on (02) 588-5100. This is followed by the Shahzada Horse Enduro, run by Andy VK2XRX over 21st-25th August.

The Hunter region are running a training camp on the weekend of 7-8th October at Crangen Bay, Lake Macquarie; all regions are invited, and further details can be obtained from Pauline VK2GTB on (049) 49-8786, or Frank VK2XVJ at VK2KLW.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd

Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Dural report

Dural Report

Here again is a report on the various activities at the Dural broadcast station VK2WI.

As listeners will know, the Divisional beacon keyer failed just after the AGM; it was traced to a failure of the 6m beacon taking out the keyer. These units are now back in service; however, the 2m beacon appears to have an unstable oscillator and is also low in power, and has been removed. We wonder whether one of our listeners, especially VK2ZRH who apparently built it, is willing to examine the unit.

As advised some time ago, our 23cm repeater will be changing frequency to accommodate the new Band Plan. As from Sunday 6th August, following the morning callbacks, it will be transmitting on its new frequency of 1273.500 MHz; it will have a 20 MHz positive offset, so its input will be 1293.500 MHz. In other words, it will be normal that morning, but you get to find us that evening.

The packet radio BBS apparently stolen from Dural last year (along with a complete HF station) still has not been located, although we have our suspicions. In the meantime, we would like to announce that the forthcoming Divisional TCP/IP system will be setting up shop on channel "5175" i.e. 145.175 MHz under the callsign of VK2KFU (until the licence has been approved); the actual IP address will be announced later on (when obtained). It will temporarily forward on the other Divisional channel of "4850" until the paper warfare has been won. Once again, if Sydney listeners want to try out something a little more advanced than the usual telephone-type BBS systems, you might like to try out VK2KFU on 145.175, on an IP address to be advised. Provision will be made for those stuck with ordinary AX.25 systems.

We are aware of the motion passed at the recent AGM, seeking the return of the popular BBS removed from service last year by the Council of the day, for reasons of their own. Please be advised that Dave VK2KFU, who is supplying the hardware for the advanced TCP/IP system, is NOT providing the other hardware; however, a BBS-type service will be made available that is compatible with the FBB forwarding system. If users want a genuine FBB BBS

system, then extra hardware will have to be obtained for it; perhaps it can be recovered from somewhere else?

-- Dave VK2KFU, Acting Dural Engineer

Contest news

Contest News

Are you taking part in this year's RD Contest? If not, why not? It seems that this contest was not given the publicity it deserved over the last couple of years, due to internal politics etc. The Remembrance Day Contest commemorates those Amateurs who gave their lives in the Second World War, and is held on the weekend closest to the anniversary of the cessation of hostilities. This year, it will be on August 12-13th, and full details appear in the July issue of "Amateur Radio" magazine. Perhaps we can work towards getting the Remembrance Day Trophy returned to its rightful home here in VK2; it has not graced the cabinet at Parramatta for quite some time now. Please consider taking part in this important contest.

-- Dave Horsfall VK2KFU

News briefs

PARROT REPEATER TO OPERATE ON SUNSAT

A "Parrot" repeater will soon be operating on the two metre band, providing fun communications to Radio Amateurs and scholars throughout the world. The repeater will be incorporated in South Africa's first satellite, called SUNSAT, which is currently under construction at the Electronic Systems Laboratory in the Department of Electrical and Electronic Engineering at Stellenbosch University.

The satellite is being built by students who have done all detail design and software. System level design was done by lecturers, some of whom studied at the Universities of Surrey, Stanford and MIT. It is therefore not strange that the satellite is very similar to the UoSATs built at the University of Surrey.

NASA scientists have learned much about the Earth by detailed studies of the magnetic field and the gravitational field, and had arranged for the Danish OERSTED micro-satellite to be launched as a secondary payload on a USAF Delta II from Vandenberg Air Force Base, on the P91-1 ARGOS mission in January 1996. NASA and Stellenbosch have now agreed to carry SUNSAT into the same orbit instead of a counterweight for OERSTED.

In exchange for the launch, SUNSAT will carry a precision GPS receiver and a set of Laser retro-reflectors. These will enable NASA to study fine orbital perturbations for gravity field recovery, and for cross verification of GPS and NASA's laser tracking

network. The orbit will be the same as OERSTED, namely polar, 400 by 840 km. The equatorial crossing will initially be at approximately 15:00, and drift an hour earlier every seventy days.

During the initial stages of the design of SUNSAT, ideas were sought for what should be included in the satellite. Very optimistically, a two meter repeater was suggested as this would be the one item that nearly all amateurs would be able to operate. However, SUNSAT is a micro-satellite and to get space on a launch vehicle, weight and size must be restricted. So, there was no room for the large duplexer that is part of a two meter repeater. A Parrot repeater was then suggested.

A Parrot repeater operates by digitizing audio sent to it on the uplink and then storing it in memory, of which SUNSAT has 64 Megabytes. When the operator on the ground releases the PTT, the digital record is converted back to audio and fed to the transmitter which is on the same frequency as the receiver.

SUNSAT's Parrot repeater will sample audio at 8000 times per second. Data words will be 8 bit, and records will be restricted to five minutes each. The repeater will periodically announce that it is available for use. The voice system will also be used for transmitting messages which will be uploaded by the command team.

MARS DROPS MORSE CODE

The following memo, dated 28 June 1995, was released by the Assistant Secretary of Defense for Command, Control, Communications and Intelligence, subject: MARS Continuous Wave (CW) Morse Code:

"Effective October 1, 1996, it is directed that the CW mode of communications will no longer be used on any Department of Defense (DOD) MARS circuits, networks, or frequencies.

MARS has been steadfastly evolving to newer technologies to improve service. Technology such as single side band replaced amplitude modulation to provide greater frequency efficiency. Likewise, packet radio, AMTOR, PACTOR, GTOR, and Clover modes of operation have replaced radioteletype. CW use and need in MARS communications has diminished over the years. It is recognized that CW can no longer compete with the rapid advancements in radio technology. Therefore, CW is to be retired from use within the DOD MARS. Signed, Emmett Paige, Jr."

--MARS Broadcast number 21, Dated 19 July 1995

Thanks to WIA

The Broadcast Officer
WIA NSW Division

Dear Sir,
I am writing to show my appreciation for the assistance given by the Institute when I appealed over the weekly broadcast for anyone who could let me have a copy of Instruction manual for a FT207R handheld. The response was very helpful and I was able to secure a copy of this manual from VK2BEU Mr. P. Stuart.

I would like to thank the broadcast reader Pixie Chappell and Mr. P Stuart for their kindness in helping me so quickly.

I am
Yours sincerely
H.R. Chapman
VK2BHC

IPS report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(21 JULY - 27 JULY)

ISSUED ON 28 JULY 1995

SUMMARY

Date 21 22 23 24 25 26 27
10cm 69 69 68 69 70 69 70
A 5 7 7 29 10 7 (5 ESTIMATED)
T 15 18 19 13 4 16 15

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET ON 21ST TO 22ND JULY, AND 26TH TO 27TH, QUIET TO UNSETTLED ON 23RD AND 25TH. ON 24TH, CONDITONS WERE AT ACTIVE TO MINOR STORM OVERNIGHT. SUDDEN IMPULSE OBSERVED NEAR 03 UT.

IONOSPHERIC F2 CRITICAL FREQUENCIES DURING THE PERIOD WERE NEAR PREDICTED MONTHLY VALUES, EXCEPT FOR A DEPRESSED PERIOD 00 TO 05 UT ON 25TH. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 21ST, 26TH AND 27TH JULY.

Club news: AAPRA

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

For Bulletin Board Operators and Node Controllers AAPRA will soon have USCC 4 systems which can run up to 4 ports and any combin-
ation of baud rates.

Our shareware library is updated to include new versions of the NOS family including TNOS Ver 2.0 which now allows compressed for-

warding.

The German programs BAYCOM 1.6 and TPK 1.82 are available and we have a simple Casspak modem to interface these with the radio.

TNC users can obtain PAKET 6.0 plus a manual - still the best packet program in the world.

For more information it is suggested that you contact AAPRA either:

- by sending a packet message to VK2IN @ VK2AAB;
- by writing to the address of VK2IN in the callbook.
- or by phoning Sydney (02) 489-4393

Welcome to any newcomers to packet from AAPRA

-- Geoff VK2BQ Publicity Officer.

Club news: Illawarra

The Illawarra Amateur Radio Society's next monthly meeting will be held August 8th starting at 7.30pm at the S.E.S. building Montague street North Wollongong visitors most welcome.There will also be a raffle of a telephone so bring ya money with ya.

Cheers de Brain [?] vk2ubf.

Club news: St George

From the St George Amateur Radio Society

The next meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout hall, corner of Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30 pm next Wednesday evening the 2nd of August 1995.

As no guest speaker has been arranged for this month, it will be an ideal opportunity to mingle and chat with fellow members and visitors.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attnding.

from -- Allan VK2XF Publicity Officer

Club news: Mid South Coast

Greetings from the members of the Mid South Coast Club. Our next quarterly social gathering and meeting is to be held at Hancock's "H Ranch", Little Forest Road Milton, on Saturday 5th August. To reach the ranch, turn off the Pronces Highway 3km north of the historic village of Milton and follow the signs.

We look forward to a good attendance. The site is a spectacular one. Our southern hospitality is famous and we welcome visitors.

Our speaker will be Jim VK2 [?] who will give us a talk on his recent sojourn in the Antarctic.

Arrivals are from 10.30 onward, bring your family and your lunch. The club provides the tea, coffee, etc and there will be a particularly interesting speaker.

from David VK2CX, club secretary

Club news: Summerland

Radio Club Hamfest

Final notice for the Annual Summerland Amateur Radio Club Hamfest.

Next Sunday, 6th August, at our clubrooms, 412 Richmond Hill Road, Richmond Hill, via Lismore, from 9am.

Many tables of electronic and computer bargains available.

Bring & Buy stalls. Commercial displays of new equipment.

Radio Foxhunt, find the Bug, Competitions, Refreshments, BBQ, Freebees.

For more info please contact Ken, VK2HE, on 066-24471, Graeme, VK2GJ, on 066-851336, or on our local club digipeater, VK2SRC-2 via VK2RPL-2, 668900.

We advise that our Byron Bay repeater, VK2RBB, 146.625 MHz, is now back on the air and performing better than ever,

Also applications for the next Amateur examinations close today, 30/7/95, at the clubrooms.

Graeme, VK2GJ, Publicity Officer

Club news: Blue Mts

The Blue Mountains Amateur Radio Club invites all interested people to attend our August meeting on Friday.

In the interest of inter-club relations we are pleased to announce that Ken Christianson, VK2QD, from the Fisher's Ghost Club has agreed to be our guest speaker.

Ken is going to talk about broadcast transmitters and associated equipment. It is going to be an interesting night, especially for all you QRO operators, so please come along.

The meeting will be held at the Blue Mountains Amateur Radio Club venue on Friday, 4th August, 1995 at 8.00 pm Springwood High School, corner Grose Road and Chapman Parade, Faulconbridge; enter from Chapman Parade.

The customary cuppa and scones will be served.

Thank you

Alex, VK2ICL Publicity Officer

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS. News Bulletin 869 30TH JULY 1995

PERTH DX CLUSTER ON AIR. REPORT FROM KEITH VK6XH

AT LAST THE PAVILION SOFTWARE HAS ARRIVED FROM THE US OF A.
ITS INSTALLED ON THE SYSTEM HERE AT AT VK6XH AND AUSTRALIAS
** FIRST ** DX CLUSTER IS ON THE AIRWAVES.

KEITH HAS ASKED FOR DX INPUT FROM LOCAL AMATEURS, AND IS
RUNNING A HELP FILE TO THAT PURPOSE.

HMMM, WHERE ARE THE EAST COAST DXERS? IF THERE IS NO SYSTEM TO
SUIT HERE, AT LEAST YOU CAN SEND YOUR DX INFO OVER TO KEITH
AND MAKE THE NEW DX CLUSTER A SUCCESS.

WISH YOU ALL THE SUCCESS OVER THERE IN VK6, HOPE YOU GET
PLENTY OF SUPPORT.

KEITH SUGGESTS WE EASTERN-STATERS GET A CLUSTER GOING WITH AN
INTERNET LINK AND WE WILL THEN HAVE A NATION-WIDE CLUSTER.

SARTG WW RTTY CONTEST

SPONSORED BY THE SCANDINAVIAN MATEUR RADIO TELEPRINTER GROUP

WHEN: AUGUST 19-20, 1995

CONTEST PERIODS: THREE SEPARATE PERIODS: 0000-0800 UTC SATUR-
DAY, 1600-2400 UTC SATURDAY, AND 0800-1600 UTC SUNDAY.

ARLD039 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, The OPDX Bulletin, Bob, WB2YQH, The 599 DX Report, The Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

SVALBARD, JW. Listen for Dominik, DL5EBE, who will sign JW0K until around August 10. He is a member of a scientific expedition and will be on the air during his spare time.

ETHIOPIA, ET. ET3AA frequents 14224 kHz around 0200z. QSL via POB 60258, Addis Ababa. On CW, look for ET3YU at the low end of 20 meters around 2230z. QSL via YU1FW.

LEBANON, OD. OK1EE/OD5 should be active until August 12. He has been heard on 14010 and 7003 kHz between 0200 and 0300z. Most of his operating is on CW. QSL via OK1FMR.

BAHRAIN, A9. Adam, A92MM, has been active on 20 meter SSB. QSL him at Box 116, Manama, Bahrain.

INDONESIA, YB. Jack, YB2ARW, is active weekends on 17 and 20 meters around 0700z, looking for the West Coast. He is also QRV daily on 20 meters around 1200z.

BERMUDA, VP9. G3AVJ/VP9 will be active during afternoons and early evenings until July 26. QSL via his home call.

ST. PAUL ISLAND, CY9. Ron, AA4VK, Murray, WA4DAN, Bob, KW2P, Bill, K4TVE and Vance, W5IJU, will be active from July 27 until August 2. They will sign their home calls /CY9. Operations will be on CW, SSB and RTTY, 160 through 6 meters and the satellites. Look for their CW on 1830, 3505, 7005, 10105, 14020, 18075, 21020, 24900 and 28020 kHz. For SSB try 3790, 7090, 14195, 18120, 21295, 24940, 28395 and 50120 kHz. And on RTTY check out 7085, 14080, 21080 and 28080 kHz.

IOTA - Actvities

1. RA9LI/9 in AS-089

RA9LI, Vasily is qrv since July, 16.1995 as RA9LI/9 from AS-089. He located on SHARAPOVY KOSHKI (AS-089, RRA: RR-06-03), about 40 km SW from CAPE CHARASAVEY (ca.71N, 67E). Vasily was setting down by helicopter and lives alone in a old refuge. He works with a homemade-transceiver (about 100 W) and a GP 10m high, mostly on 14.250 - 14.270 Mhz. He has a generator and about 600 litres fuel and hopes to be qrv until the middle of August. He 'll join in IOTA-contest.

QSL via DL6ZFG, pse be patient, the cards will be print after receiving the logs from Russia.

2. RU0B in IOTA-contest

A group of members of RRC (Russian Robinson Club) leaded by Valey, RW3GW started July, 20. from Krasnoyarsk via Dikson-isl. to Russki-Island (AS new??, RRA: RR-06-19) in Nordensheld-archipelago (77N, 96E). They will be qrv in IOTA-contest with the call RU0B. QSL-route was not given.

After the contest the group will be qrv from AS-087, Island Arkticheskogo Instituta (RRA: RR-06-15).

73, good hunting!
Rolf, DL6ZFG

1992. Re: Amateur (jerks) Electronic Supply

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-31 00:00:00 UTC
From: Ed Juge <ed@cis.compuserve.com>
Message-ID: <3vimtu$c01@dub-news-svc-4.compuserve.com>
Source record: 241364

Sorry to hear about your bad experiences, Duffy. I've had excellent luck with AES and HRO -- in
person. I travel extensively in my work and visit several of their stores most times I'm in the
area. Most couldn't be more attentive or helpful. The manager of the Las Vegas store even
offered me a guided tour of the facility --shop, warehouse, etc.-- on my last visit.

Could it be you were expecting a bad experience? I spent 11 years in the ham business and can
tell you that many customers walk in the door with aan attitude -- chip on their shoulder.,
looking for a fight, sure they're about to be screwed or determined to argue the price down below
cost. They do NOT get favorable treatment. In fact, the guy behind the counter frequently can't
wait to get 'em out the door. I'm certainly not suggesting you are any of these things but my
experience was that many such folks don't even realize what their attitude is. I'm the kind of
person who sports rose-colored glasses... I expect good things, and they generally happen for me.

Ed

1993. Code vs. other ideas

Newsgroup: rec.radio.amateur.misc
Date: 1995-07-31 00:00:00 UTC
From: gross@camelot.bradley.edu
Message-ID: <3vinkc$94q@camelot.bradley.edu>
Source record: 241365

I have read many posts about the code vs
no-code (the lic class I hold). Many people
seem to be worried that all the Ham bands will
become a big CB land. Understand I still support
the idea of code being required for HF (I hope to
test for my General in Sept), but I have always
wondered why all the questions are printed all over
the place. I have taken state and national exams
for other things, and never has the test pool been
in print for public access. I have heard of many
people remembering all the questions and answers
insted of learning the material. I am sure we all
used the test question bank to prepare for the
exam, but could there be a better way to test people?

What I mean by better is provideing the material,
like the books from the ARRL, with the needed info
and not the question pools.

I may get attacked for this, but I will survive..

I have a TM-732 (50W@2M/35W@440) with a dual-band antenna on the
roof. There is no interaction between the radio and any vehicle
electronics.

Occasionally I run a TS-440S @ 100W with a HamStick on the rear
bumper .... again, no problems.

Car is a 1992 Olds 88.

Would seem the cruise control in the Buick and Olds should be the
same. Likely, too, the computer.

I will be visiting the Charleston area next week, and I wonder if there are any open autopatches, or if someone would be nice enough to use their closed patch for the week. I will be operating on 2 meters.

Thanks in advance,

Rickey/KD4UCB

It's meaningless anyway due to the self-selection of the sample.

He could have still gotten it from the FCC database. That's a public record, and microfilms of it exist at all FCC offices. I've done many such searches at the local FCC office. It may even be in computer accessable form by now.

Several conclusions can be drawn so far. This person obviously has it in for your department. That may indicate a previous relationship, either as an employee, or as the subject of your department's actions. The person also obviously has radio transmitting equipment capable of covering your frequency assignments. That's going to be either commercial type equipment, or modified amateur equipment, or more remotely likely, home built equipment. And the person has access to your alternate frequency either through previous direct access to your license documents, a search of the FCC database, use of a signal sniffer near one of your transmitters (last night, indicating close physical proximity), or, as you suggest, access to one of your radios, either now or in the past.

So, I'd suggest that you're looking for a former employee, a current disgruntled employee, a student, a member of the faculty, or a member of the administrative staff. That person may hold an amateur license or may work for a radio shop that has serviced your equipment sometime in the past. The person may have neither association, but still must have some knowledge of radio systems, perhaps by being one of your

current or former employees. The content of the transmissions may
give you additional clues.

>I may get attacked for this, but I will survive..

> Oliver
> N9UWI

Oliver,
I agree with you 100% that the exams are made way too easy by providing the answers. In fact, I'd even go farther than (I think) what you suggest, if you're suggesting that the ARRL books, for example, stay the same, just without the questions and answers. I suggest that the FCC just provide wide areas that you need to learn about. For example, for the Extra test (the one I'm studying for now), they would tell us that we needed to know about satellite operations, EME, FSTV, etc. Then the ARRL (or whoever) could publish books that covered these subjects in depth, so that we're ready to answer any question the FCC can think of. This way you actually have to learn the material, and will retain it once the test is over.
One other thing about testing. I think they should take out the asinine questions on spectrum allocations. I don't know about you, but _I_ sure can't remember "the CW-only frequencies in the 40-meter band for Advanced-class operators" or any such nonsense. So what do I (and everybody else) do when we're unsure and about to operate? Look at a chart!
That last paragraph was just venting. I'm better now.

73,
Russ KI7FL

>15-20 minutes per day spent practicing the code will gain you
>HF privileges - and what a wonderful privilege that is!

When I watched TV, they paid me $35 an hour to do it. My consulting rate now is $100 an hour. Now if you figure it takes between a lower bound of 120 manhours and an upper bound of 2,000 manhours to achieve manual Morse proficiency, that's between $4,200 and $200,000 worth of sunk cost per Morse operator. If we look instead at minimum wage, costs drop to between $510 to $8,500. So even if you are so unproductive that you can't find something better to do with your spare time than clerk at Radio Shack or flip burgers at McDonalds, there's still a considerable hunk of change tied up in those sunk costs to learn manual Morse, certainly more than sufficient to buy one of the better digital appliances that will have better performance on the air than OOK Morse.

In short, you are suggesting people spend their unproductive time doing something productive, which is fine, but what you are suggesting that they do isn't even cost effective at minimum wage in terms of communications performance. You may argue that they have acquired a new skill, and I'd agree, but I have to ask what value that skill represents in today's market. In times past, it might have opened up employment opportunities, but no more. The few remaining paying Morse positions are disappearing rapidly, and Morse operators are being laid off, not hired. OTOH, there is a growing demand for those with digital communications experience. If we're going to train operators, we should at least be training them in skills that will be in demand.

Part 97.1 says amateur radio is to provide a self-trained pool of operators skilled in the radio arts. Read in the context of CCA'34 that means radio arts of use to the government and/or the general public interest, IE the skills mandated should have some applicability outside the confines of amateur radio sport. That's

largely not the case with Morse Code anymore.

I don't know who the "they" are that you are referring to, but I
haven't yet heard most amateurs (or the FCC) refer to the amateur
frequencies above 30 MHz as CB. (I have heard it from a disgruntled
few in Maryland, but I consider the source.)

>15 hours.

I have a different problem which maybe someone can shed light on. I
havea 12V battery pack for my FT530. It discharges at a rapid rate to
where it is alomost useless. When I attach it to the radio after charging,
the voltage drops continuously from 13.8V or so to discharge (display
blinks) in 30 min or less -- even if not transmitting. I have been very
careful about charging my batteries so they don't overcharge. I'm using
the charger I got with my FT530 7V battery to charge the 12V pack
(purchased from W&W). Someone suggested that this might be the
problem - that it needs a different charger. I plan on calling W&W to see
what they have to say when I get a chance.

Can anyone shed some light on this?

Thanks.

>tautologous???? So what?

Ah, but that's the point, you don't *have* to be able to hear them to
work them using better digital codes. The '95 Handbook has an interesting
chart, showing Clover operating at -10 dB SNR. You won't hear that, but
the message still goes through.

>: The early
>: SSB operators couldn't intercommunicate with envelope detector equipped
>: AM operators either, but eventually the superior mode became dominant
>: anyway.
>
>Nice apples-to-oranges comparison. SSB is a "better" way for two
>people to "talk" to one another. Computer-aided, machine-to-machine
>digital modes have little in common with human coded and de-coded
>Morse. You would be more accurate comparing modern digital modes with
>traditional RTTY.

Hand coded Morse is just a less efficient way to transmit text, no
different in concept from RTTY or the more modern digital modes.
In all cases it is what is being *spelled* that matters. That's
the human contribution to the conversation. The purpose of any
communications medium is to facilitate the transmission of thoughts
and ideas from one person to another. The more quickly and accurately
it does that, the better. Almost any digital mode does that better
than manual Morse.

When conditions allow, voice can be even better in terms of communicating
nuances than a text mode, and with even better conditions, visual modes

are better still (the old one picture is worth a thousand words), but when the going gets tough, its the modern digital modes that keep going when the other methods can't hack it. They represent the most robust signaling systems we know how to construct within amateur constraints. They also happen to be the most cost effective and spectrum and power conserving methods we can use under harsh conditions. Clover for example occupies only 0.67 Hz per bit of information passed, nearly 20 times better than OOK Morse at the same signalling speed.

The performance difference between Clover and manual Morse is several times greater than the difference between SSB and AM. If SSB won out against AM in transmitting analog voice because of superior performance, there's little reason to think digital modes like Clover won't ultimately win out over manual Morse for transmitting text. Sure, the equipment required is a bit more complex in both cases, but amateurs have elected to pay that cost for SSB, and there's little reason to expect that they won't also ultimately be willing to pay the cost for a better performing text mode too. Besides, with modern advances in VLSI, costs have actually declined for both modes. Today's SSB rigs cost less in constant dollars than comparable AM rigs did in their day. And there's no doubt that modern digital electronics costs have plummeted compared to the costs of only a few years ago, even neglecting inflation, while manhour costs continue to skyrocket.

I have faith that many of the newer amateurs will make the change, if they are shown the truth. Perhaps many of the old installed base of amateurs, set in their ways, will continue to fight the change, but in time they'll all be taking dirt naps, and the issue will be settled, as it was with SSB vs AM.

Grumble, I'm going to be up on 2 with everyone else I guess. That's ready to go, and I won't have the six meter station back on the air in time. (Long sad story about that.) My highest priority is to get my UHF gear installed in my new Jeep. I'm in here cooling down from running the DC for that project right now (Did someone say heat wave? It's barely noon, and already too hot for any self respecting person to be out fooling with a car). And my second priority is to repair the power supply of my FT736R. *Then* I'm going to think about 6 meters again.

Well, the military does have artillery, but shutting up those enemy
jammers is harder than it sounds. Military systems have to work against
a malevolent, intelligent, and resourceful enemy trying their best
to disrupt the communication using every megawatt at their disposal.

Wait, that *does* sound like a DX pileup. Now if this 105 had the range
to reach that lid down in Texas...

At the last hamfest I went to (earlier this month) there were now
about 7 or 8 companies making CD/ROMS with the FCC amateur database.
I think the cheapest one was about $12. Of course it wouldn't
interface with any of the logging programs but if you just want a
copy of the database then it seemed like a heck of a deal.

I would like to get your honest opinion regarding this unit. I am thinking of getting rid of my PRO-39 scanner and HTX 202 to get the unit. Please e-mail your thoughts about the radio and your opinions. Thanks in advance.

2016. How to improve my CW speed to 13wpm ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-01 00:00:00 UTC
From: buddy10@aol.com
Message-ID: <3vmksh$t7a@newsbf02.news.aol.com>
Source record: 241188

I just passed my 5wpm CW test. I want to take advantage of the "momentum"
i've built up ! I know that if I slack off now it would be real hard to
"get back on it." I want to get up to 13wpm a.s.a.p. I do not have an
HF or HT unit(yet !). I have SuperMorse,Morse Academy,Morse tutor gold and
NuMorse(the best of 'em I.m.h.o.). What would be the best best way to get
up to 13wpm ? I will be studying CW about 1hr a day. How long do you
think it would take to get up to 13wpm ? Please e-mail me.
I thank you all in advance for any help you can provide.

2017. Next Hamfest in IL/IN?

There will be a hamfest in Onalaska, Wisconsin on August 26th at the Omni Center 255 Rider's Club rd. Talk-ins will be available for those unfamiliar with the area. Onalaska is just north of LaCrosse. There are still a few tables left for anyone wanting to set up. For more information, E-Mail me gfarobin@aol.com or contact Dick Low K0JYB at (608)784-9176.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 AUGUST AND FORECAST FOR 02 AUGUST - 04 AUGUST

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 31 Jul
Daily Proton Fluence >1 MeV: 1.1E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 3.7E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Aug 03 Aug 04 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Aug: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 31 Jul
Learmonth 5 2222 1111
Fredericksburg 7 7
Planetary 5 6

Observed Kp for 31 Jul: 2320 1123
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Aug 5 Quiet
03 Aug 5 Quiet
04 Aug 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

01 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Aug normal normal normal
03 Aug normal normal normal
04 Aug normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
01 Aug 24 near predicted monthly values during local day then
15-30% enhanced.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
02 Aug 15 Near predicted monthly values
03 Aug 20 Near predicted monthly values
04 Aug 20 Near predicted monthly values
COMMENT: Darwin MUFs: near predicted monthly values to 30% below with
spread F during local night.Townsville MUFs: about 5% below predicted
monthly values with spread F during local night.
Hobart MUFs: near predicted monthly values with spread F.

Jack Palladay (Jack.Palladay@InternetMCI.com) wrote:
: Jeez, enough already. Is there a Coke versus Pepsi newsgroup
: somewhere? You guys can each take a side (ie. Coke is CW and Pepsi
: is SSB) and then argue to your hearts.content. It never ceases to

The only people that bring up SSB is those using CW to show how much
better it is then SSB. What the arguement really stems from is some people
who want to spread falsehoods about CW being able to get through when nothing
else will, and the discussion of Morse code as a testing requirment for
licensing. The first is continous brought up, because many feel it's time
to put that myth to rest. The second because some feel it is a good lid
filter while others think it's no more valid then testing SSTV.
The second arguement is a decision each of us choose, the first is a
provable fact.

The subject matter is not as simple as choosing your mode (or cola) and going with it. Your Cola analogy doesn't quit fit in though in simple terms, it's like a group trying to do away with Coke and telling all new cola drinkers that they must drink RC Cola now (and it's cheaper stuff) though it's much more complicated than this.

Sounds like you're sick of it all so we'll leave it at that ! :)

Regards..Hugh VA3TO

2023. RF/Coax Relay Design ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-01 00:00:00 UTC

>
> Any help would be appreciated, especially a pointer to some reference books.
> Thanks in advance!
> Mark Olson N9LTJ

Hi Mark... I own a couple of good quality RF switches..here's an attempt
at describing the inner workings that might shed some light on how the
design is important.

Specifications which an RF switch are rated by:
Power rating, Impedance, Insertion loss, VSWR, Isolation and Contact
resistance.

Shielding is imperative and part of the integral design but here are some
other things that make an RF switch special...
A good quality switch, especially important as you go up in frequency,
will maintain the correct impedance. For example, the 2 position
RF switch that I have uses a heavy block of metal that has a machined
channel in the shape of a "Y". The common connector is at the bottom and the
2 selectable connectors are at the top. The rotary part is purely mechanical
in that the knob turns a shaft that has a cam made of teflon on the end
inside the switch. This cam pushes one of 2 Berillium Copper leaf springs
(one for each position coming from the RF connectors) to make contact with
the common RF connector. The unselected leaf gets pushed to ground. The
opposite is true when the switch is rotated to the 2nd position. A metal
plate covers the bottom of the switch. It is the physical dimensions of
the channel and leaf spring contacts that maintain the coaxial impedance.
And grounding the unused contact provides better isolation to that piece
of equipment. I've heard of a case where 2 rigs were connected to a cheap
RF switch and common went to the antenna, the unused contact was not
grounded and of course stray RF from the transmitter in use found its way
over to the unused contact and then up the coax to the other radio and
poof !

I have a nice B&W RF relay that is theoretically the same...the machined
channel and leaf spring affair that is switched by a soleniod rather
than a manual rotary switch.

Hope this is of some help. It is difficult to convey by written description...a picture would be worth a million words...true in this case.

Regards..Hugh VA3TO Toronto

jwprice@unity.ncsu.edu (Jim Price N3QYE) suggests:

>>You'll just have to practice the code, take the test, and then
>>forget about it like I did.

Or you could practise it, take the test and then work 320 DXCC
countries using it, as I have (not trying to be being immodest
here, just mentioning that you can actually use Morse code).

And don't tell me that learning Morse code should be left to the
individual amateur - had I not had to learn it in order to get
a license, I don't know that I would ever have bothered to learn
it. I figure the gumment is actually doing us a favor making us
learn a minimal amount of code, then we can take off from there if
we want to.

OK, so not everyone wants to become a DXer, but you don't know
that before you try it. Even if you don't use it for DXing, the
fact is that it is used extensively on the amateur bands, for
whatever reason. Is it out of date? Probably no more than the
whole idea of communicating using the ionosphere, I don't think
the pros do that much these days, do they?

Vote for what? The FCC has never asked me to vote on a change to Part 97.
Yes, I can comment on proposed changes to the rules but I doubt
if we will ever see Part 97 amendments on ballots.

I need a little help.

I am in need of the correct wiring setup to connect my TNC and HT togather.
The TNC and HT are listed in the Subject line.

I also need the values of any resistors and or caps that need to be
installed in line. I have went through my docs several times and I can
not find any values even though the spects say to install them...

Thanks

Look in the February 1995 issue of Monitoring Times. There is an article about computers and RFI. The author (as of time of print) was/is selling a conductive paint known as RFI-822, or you can send him the monitor with a check to have his business coat your monitor for you.

If PKUNZIP doesn't work then you might have an out of date PKzip util
I think the most up to date one is PK204G.exe If that doesn't work then
look for a Unix compression utility.

Jim:

Note that if you are trying to UNZIP a recently zipped file
with an older version of PKUNZIP, it probably wont work. I
believe the latest PKUNZIP is 2.04g and has a date of mid-1993.

Are you telling us that your on your own regarding tower restrictions if no one tells you about them? That you can't add conditions to any offer on a house in a state other than California? The offer I made on the last house I bought had some blank areas to fill in where things like "the seller will have the carpets profesionally cleaned upon vacating" and CC&R's had to be reviewed. They were written in at the end of the offer before I signed it.

What this tells me is that hams that live in other states are pretty stupid not to have researched tower/antenna restrcitions when they buy a house. When you make an offer, make it with contingencies, like, "I have to sell my house", "the seller will provide documentaion of all covenants and restrictions RECORDED with the the property" - if they want to sell you the house they, will provide it. If you are willing to buy the house without seeing this information, you get the restrictions you deserve.

Again - I am talking about California - the going broker commission around here is 6%. That can easily equate to $6K and up. When you have a realtor act in dual agency (the broker represents you AND the seller) they are getting it all. Make them do something for you, earn the commission and provide the information. I don't buy the claim that realtors just don't want to bother with it...if they don't want to bother, they don't deserve the business.

Once again...the information is there. Make someone give it to you. Nothing should sneak up on you after you buy the house in regard to antennas.

BTW- Even Dreamworld has CC&Rs - keeps out the riff raff.

>
>...and from the Houston area, and from southern California...

I live in Southern California, and operate 2m frequently. There
sure has been a great amount of growth on 2m since 1991, but
it really doesn't subjectively strike me as much more like CB
than 2m did in 1978. I've seen some notes here on the Usenet
from someone that live in Hawaii describing the 2m climate in
SoCal, but I don't think he has operated 2m in Los Angeles
for a long time.

>Never let facts get in the way of a good argument, right, Gary?

Look, Splut, don't make me smack you....

2036. Re: What is "HAM"??

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-01 00:00:00 UTC
From: tigger@jcomm.uoregon.edu
Message-ID: <3vkoof$d52@maureen.teleport.com>
Source record: 241280

I remember reading a long time ago (before I was a ham) that the term "ham" was used so far back that no one knew what it meant anymore. Could be wrong, but I have never heard anything to the contrary.

From: tigger@jcomm.uoregon.edu
Message-ID: <3vkp4r$d52@maureen.teleport.com>
Source record: 241281

Morse Academy is a CW program for PCs. I have the 5.1 version and I think it is a great program. The one I have came from a package called Ham Operator by The W5YI group. Cost me $30 and it came with a program for all the written exams too. I know MA is also a freeware program available from the ARRL, but I don't exactlly know where. Try http://www.acs.oakland.edu/barc/arrl.html to get to the ARRL homepage and look around - it should be there somewhere. If you need any more help, feel free to email me.

2038. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-01 00:00:00 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-807274833@gonix.com>
Source record: 241282
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

Posted-By: auto-faq 3.2.1.3
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.15 07/29/95 09:31:08
Changes: List now in 3 parts, updated archive site info
Posting-Frequency: posted on the 1st and 15th of each month

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under
the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port
5555 (if the standard Gopher port of 70 was used, the ":5555" part
would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with
callsign.cs.buffalo.edu via non-standard port 2000 (if the standard
Telnet port of 23 was used, the ":2000" part would be replaced by
":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from
your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all
http: URL's in this directory also have corresponding ftp: or gopher:
URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all
URL's through the Lynx WWW client, any referenced documents external
to this document are subject to future changes beyond my control. In
addition, with networks and their administration being what it is,
many services with up-to-date URL's may be temporarily unreachable.
Please consult with your local gurus, consulting staff, or help-desk
to confirm that it's a non-local problem, then ask the Elmer him or
herself (me in the case of URL's which appear outside of individual
entries). The currency and accuracy of URL's should be at least no
worse than that of the Elmers entries themselves (which are each
individually confirmed by me every 2 years, and updated within 1 month
on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described in the list of Frequently Asked

Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list. (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info

news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar
with them, and cannot offer much technical support regarding their use.
(I'd appreciate feedback on whether or not you find them useful,
though.)

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW sites:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers/top.html
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html

The advantage of reading the Elmers list at these sites via WWW client
software is that all URL's are converted to hypertext links.

see also the newsgroups under comp.infosystems.www.* (I haven't listed
URL's for all of the newsgroups under this hierarchy as there are now
about a dozen of them (!!!).)

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

If you want to access the BBS via Telnet, all you have to do is access:

! telnet://wb3ffv1.sed.csc.com/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

! ftp://wb3ffv1.sed.csc.com/

and login as 'anonymous' (may not be necessary, depending on your FTP
! client). This system is currently attached to the Internet via a dialup
! SLIP link, and should generally be available 24hrs, but at times the
! modem will drop the line. Also, since this isn't the fastest link, I
! will be limiting the maximum number of anonymous sessions for the
! moment.

is an experimental Mac interface at this time, I'd like to make it an
officially-supported platform.

+ The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to
+ -E-mail-address listings and is growing daily.
+
+ We have a WWW page where you can input your E-mail address directly into
+ the QRZ! Callsign Database, where it will be published on both CDROM and
+ on the Internet. When you use this page, your E-mail address is made
+ instantly available to the online database.
+
+ Everyone is encouraged to check in and add their E-mail address to the
+ server. There are no charges or listing fees, and it's free to all
+ radio amateurs. The procedure takes only a second, and you are only
+ asked to supply your callsign and E-mail address.
+
+ The URL is:
+
+ http://www.qrz.com/email.html
+
+ Register your E-mail address today!
+
Please pass on any ideas, suggestions, comments, etc., to my E-mail
address above.

+
+ rec.radio.amateur.misc Frequently Asked Questions (FAQ)
```

```
+
+ Available from:
+
+ http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/
+
+ Currently the posting of these articles have been suspended indefinitely
+ (and will probably be removed from the above sites shortly). New
+ editors are being actively sought to take over maintenance of the above
+ resources and keep them from disappearing from the net permanently. As
+ with any volunteer effort, new volunteers are often needed. We need new
+ editors to post the above FAQ's. Preferably this should be someone who
+ has enthusiasm for hobbyist radio, experience with Usenet, and the
+ ability to work with the other editors. No single person can know all
+ the various aspects of these diverse hobbies so the editorial review
+ groups are intended to make a greater combination of experience. A new
+ maintainer is desired at this time to provide a fresh outlook as well as
+ the opportunity to train new volunteers and avoid overreliance on a
+ small group of people.
+
+ The FAQ's were posted with the auto-faq software, which is written in
+ Perl (see Paul Schleck's entry). So it would be a plus for volunteers
+ to post the FAQ to have Perl installed on their system and be able to
+ use "cron" or "at" so that postings can go unattended.
+
+ With widespread net acceptance and use of the World-Wide Web, it might
+ be desirable to rewrite the FAQ as a minimal "pointer" article with URL
+ links. Such a minimal FAQ would reduce maintenance burdens, ward off
+ criticism of the document for being "too big," and could be maintained
+ as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an
+ ASCII file for posting to news (to cover users who don't use WWW, as
+ well as to actually feed a couple of automated FTP, Gopher, and WWW
+ sites; see the companion posting to this file, "Amateur Radio: Elmers
+ List Info and Administrivia" for more information).
+
+ Anyone who wants to make their contribution to the Net as a volunteer
+ should contact the Elmers Directory maintainer at
+ elmers-request@gonix.com.

State Frequency Coordinator, Texas VHF-FM Society
(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10
years. I don't know it all, but through my contacts I can find someone
that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts
through the ARRL and a BBS.

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@kentrol.synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to

no-one else. While that's perfectly OK in and of itself, public service
is a good way to break out of that mold and get more fun from radio
while really helping out.

JPS Communications, Inc.

For those interested, JPS Communications, makers of DSP noise filters
and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses
of DSP in amateur radio. If you know of some, I'd appreciate hearing
about them. There are a lot of people experimenting with new
modulation schemes, voice compression, noise reduction, DSP IF
techniques, and lots of other interesting applications. I'm planning
to add a page with links to this information, so keep an eye out for
it, and if you have something to share, please drop me a line.

Brian Hammill, KD4BFJ | brianh@dante.exide.com
Software Engineer | Exide Electronics - Small Systems Group
Raleigh, NC | "Powering Your Network with Intelligent Solutions"

I am especially interested in VHF/UHF and microwave amateur bands as well
as Amateur television. I am treasurer and a founding member of the
newly-formed Triangle Amateur Television Association in Raleigh-Durham-
Chapel Hill, NC. I am willing to share my expertise in the following
areas:

ATV - Getting started, starting local activity, repeaters.
VHF/UHF - Propagation, what you need to get started, operating portable,
contesting, weak signals, and DX.

Sealed Lead Acid Batteries - How to take care of them.

++

Lance Halle KC7FVX

lanceh@crl.com

I will be glad to field questions in the following areas:

DFing - Local interference committee chairman
OO questions - Phoenix area Official Observer Coordinator
BSA Merit badge - Advisor of Ham Radio Explorer Post

Just let me know what all you need and I'll do what I can.

News of local enforcement actions and FCC Notices of Apparent Liability (NAL) may be found on the WWW page of the Arizona Repeater Association (of which I am a member):

http://www.indirect.com/www/ara/

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive

Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org

with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

++

Richard Hieber DL8MFQ, AA8CP (Extra Class)

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise: QRP work
mobile operation
computers (DOS, OS/2, Linux)
Packet Radio
wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html
http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free environment for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there

are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note: The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a

teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both
in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for MS-DOS
users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line). Through
user support I hope to keep the latest and greatest ham software on-line.
The BBS also offers access to nearly all of the Internet (USENET) NetNews
groups, plus access to most Internet services such as E-mail, FTP, TELNET,
Gopher, WWW, Callsign Lookup, Etc... Below is the information that is
needed in order to access the BBS via Telephone, Telnet, or FTP. Please
pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET/FTP - telnet://bbs.abs.net/ (login: bbs)
ftp://ftp.abs.net/

WWW - http://www.abs.net/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's

AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
G8BPQ PC-Node (Version 4.08)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of available archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic directory.

If you want to access the BBS via Telnet, all you have to do is access:

telnet://bbs.abs.net/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://ftp.abs.net/

and login as 'anonymous' (may not be necessary, depending on your FTP client).

ampr.org IP Coordinator for Maryland Subnet (44.060.xxx.xxx)

(see James Fay's entry instead for ampr.org IP coordination in Prince George's, St. Mary's, and Calvert Counties)

Fred Lloyd, AA7BQ flloyd@qrz.com
Scottsdale, Arizona | finger flloyd@qrz.com for PGP Key | http://www.qrz.com
---

Author of the QRZ! Ham Radio CDROM. I am interested in receiving
amateur-radio-related public-domain and/or shareware programs, data
files, frequency lists, etc., that would make a useful edition to the
QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and
will donate copies of QRZ! to qualifying non-profit organizations. Send
E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

ftp://ftp.qrz.com/
http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

The URL is:

http://www.qrz.com/email.html

Register your E-mail address today!

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State Univeristy
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

Chuck Adams K5FO

adams@sgi.com

Maintainer of Standardized Info Sheets on QRP Rigs

They are available from the QRP-L WWW Pages at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html
http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

Owner of QRP-L Mailing List

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

VHF packet (AX.25 and TCP/IP)
HF SSB and RTTY
FM/repeaters
Clubs/activities
Public relations
Writing (for newsletters and ARRL publications)

My job at as QST Features Editor at ARRL HQ includes (among other
things) writing and editing general-interest feature articles for QST,
and writing the FM column, Up Front in QST and Strays.

I'm the "handling editor" (copy editor+) for other regular columns
conducted by other contributors, including Packet Perspective by Stan
Horzepa, WA1LOU; Public Service by Rick Palm, K1CE; Club Spectrum and
Section News by Steve Ewald, WV1X; How's DX? by Bill Kennamer, K5FUV;
Happenings by Jim Cain, K1TN; Contest Corral and Special Events by
Warren Stankiewicz, NF1J; Hamfest Calendar and Coming Conventions by
Gail Iannone; most of the contest rules announcements and results
articles; and I compile the Annual Index in the December issue.

I coordinate and often contribute to the New Books reviews and New
Products listings scattered throughout the magazine, and often

contribute to QST Product Reviews. I also wrote the "Modes" chapter in the 1995 ARRL Handbook and chapters in the ARRL Operating Manual, and I've contributed to several other publications, including W1FB's Help for New Hams (ARRL) and Ham Radio Horizons (CQ Communications).

I started working at ARRL HQ as QST Copy Editor in December 1989.

I'm 37 years old, I've been a ham since 1976 and I hold an Amateur Extra Class license. I'm a member of the ARRL, the ARRL A-1 Operator Club, Ten-Ten International Net (53313), and the Middlesex Amateur Radio Society/Connecticut Amateur Radio Emergency Service (MARS/CARES, an ARRL Special Service Club, in which I served two terms as president and a couple of years as newsletter editor). I'm also an ARRL Public Information Officer for the Connecticut Section. These days, most of my on-air time is limited to 2-meter and 440-MHz FM and 2-meter TCP/IP packet radio, although I crank up the HF rig when I can spare some time and try to join in VHF/UHF contests when I have the time and access to equipment. My favorite Amateur Radio activity is Field Day; the MARS/CARES club has a terrific time with that event every year.

I have about 10 years' experience with personal computers, including MS-DOS, Windows and IBM OS/2. I was a full-time professional commercial broadcaster for 12 years.

My latest volunteer public service project is that I'm the official Amateur Radio Liaison the the 1995 Special Olympics World Games, to be held in Connecticut. I report to Dr Chuck Bruder, N3AGA, the Special Olympics' Deputy Commissioner of Telecommunications. (This is supposed to be literally the biggest event in the US in 1995, and possibly the world! They expect 10,000-15,000 athletes, 45,000 international delegates from almost all nations, more than 500,000 spectators, about 20 hours of prime-time network TV coverage, and probably a visit from President Clinton and the First Lady...whew!)

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

Electronic Circuits
Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

++

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and

experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP,"
"MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.)
To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get
transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your
guest login name (if you have one). If you want a permanent login,
write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

++

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

++

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the
Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I
also use SSB. I have had experience with light service on both rigs
(including the internal antenna tuner on the 940 and the tube finals
on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF
stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2
meters, and have recently gotten involved in packet radio (having
gained some experience on the hardware end of setting up such a
station).

Boston ARC Web page: http://www.acs.oakland.edu/barc.html
ARRL Web page: http://www.acs.oakland.edu/barc/arrl.html

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is
available at ftp://oak.oakland.edu:/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service Rules and Regulations) at: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/rib/part97.txt

Programs mentioned in QST are in: ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too: ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive: ftp://oak.oakland.edu/pub/hamradio/mac/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list, I have incorporated both of these listings into the Boston Amateur Radio Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

With the cooperation of the Boston Amateur Radio Club, I have put together a World-Wide Web page for the American Radio Relay League (ARRL).

Since the ARRL does not yet have web capabilities of their own, this page is being offered on the same site as the Boston Amateur Radio Club's web page.

The address to access the page is:

http://www.acs.oakland.edu/barc/arrl.html

It has pointers to the ARRL Letter, E-mail addresses of HQ staff, official League bulletins, and much more!

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a copy of the page via E-mail; send a message to listserv@info.cern.ch with the word "help" in the body for more information). Ask me for more details about this.

>
>Ed
>
Gosh, I don't know how any ham walking into a ham radio store could
expect a bad experience. This seems to be a silly response. Every ham
I know looking to spend money is excited about the prospects of having
a new piece of ham equipment.

What I expect in walking into any ham radio store, or just about any
retail store for that matter, is to be greeted with a statement like, "
hello, if there is anything we can help you with, just ask." Or when I
walk up to the counter looking at radios, "can we show you something?"

But when you walk into a store and there are clerks standing around
with pained looks and no one acknowledges your presense, seems a little
stupid and careless. It says we really don't want to wait on you and
we could care less about your business.

I am glad to hear that your experiences in traveling the country have been so good. Many hams have acknowledged here that their experiences have not been as good. I can't believe that all these hams are walking into the stores or calling the stores, looking for a bad experience.

Maybe your personality is so magnetic that the salespeople willingly gravitate to you and not the rest of us hams?

Regards,

Duffy - WB8NUT

2045. Young Hams of America

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-01 00:00:00 UTC
From: bm133@yfn.ysu.edu
Message-ID: <199508011314.AA10051@yfn2.ysu.edu>
Source record: 241289

Greetings to everyone on the newsgroup.
I am introducing an all-new, exclusive Amateur Radio club targeted
toward its younger members.
The club is called Young Hams of AMerica (YHA). YHA actively pursues Amateur dio operators
under the age of 21 worldwide; however, all licensed
individuals are invited to join. While we are designed for our
younger members, YHA is really about securing the future of AMateur
Radio by instilling good operating practice on the younger operatorss
who will eventually inherit the airwaves.
If you are interested in becoming a member of this organization, leave you name and address
via e-mail at bm133@yfn2.ysu.edu.
thank you for your assistance in these efforts to provide a brighter future for
Amateur Radio.

nobody@nowhere.nodomain

rec.radio.amateur.misc Frequently Asked Questions (FAQ)

Available from:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html
ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

++

Bruce Perens AB6YM

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30.

Free CDROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

AMSAT-NA Life Member #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

++

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

Net Control, Best of 75 Net

Meets every Saturday evening at 1930 Eastern Time at 3.975 Mhz (75 Meter HF Amateur Radio). Guests via the KO4TA phone patch usually arrive about 2100 Eastern Time.

The purpose of this net is to bring the Amateur Celebrity to the Amateur for an opportunity to ask and answer questions. Past guests have included Barry Goldwater, Wayne Green, Hap Holley, Fred Maia, and Bill Pasternak.

The 3.975 Mhz frequency is also home of the Friday Night Trader's Net at 1930 EST as well as good-natured discussion in general almost any other time.

David Stockton, GM4ZNX

dstock@hpsqf.sqf.hp.com

SWL since 1960
Licensed since 1984 (UK full class A)
Degrees in electronics&comms and digital techniques etc.
Currently senior design engineer doing RF design

Fairly broad interest in amateur radio (but not contests!)

Antennas, Transmission lines,filters from fundamental theory to practice
Receiver structures and circuits from simple to state of the art.
Transmitters, ATUs
Test equipment
Wide experience of troubleshooting/repairing equipment.
Professional experience of EMC/RFI
QRP
UK Operation and Licensing

My morse is flaky, but I keep working on it
No interest in contests
No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL Technical Information Service Coordinator (tis@arrl.org)
ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership
benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in
one of the many books about Amateur Radio. Folks who call or write to
ARRL TIS staff are often referred to one of these books or to a past
magazine article.

However, most hams find that the fastest way to get the answer is to do
their own research. Publication catalogs often talk about what kinds of
information are available in different books. A few good books will
answer the vast majority of questions as well as enhance a ham's
knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of
articles appears in the December issue of QST and other magazines.
These indexes will usually have an article or two (or six) about a
particular topic. If an older QST or QEX article is not available
locally, the ARRL Technical Department Secretary can provide a copy for
a small fee. Back issues are also available from the QST Circulation
Department.

The ARRL Technical Information Service is a valuable source of
information and research for questions that cannot be answered by other

means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1) How to operate HF from your apartment without being evicted
2) How to pass tests, both written and code
3) How to make a virtue out of the necessity of your limited equipment,
and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the
baby is asleep, so the XYL demands silent running. Besides, with my
wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in
Eugene, OR, is pleased to announce the QCWA World Wide Web Home Page,
available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to
any radio amateur licensed today AND also licensed 25 years or more ago
(there is NO REQUIREMENT for continuous licensing over this time period
-- if you received your first ham license on or before January 1, 1970,
you're now eligible). Included on the Web page are:

- Photos, biographies, addresses and phone numbers of QCWA 1995-1996
Officers and Directors
- Database of local Chapters (nearly 200, worldwide), including name,

address, and callsign of Chapter Secretary
- Listing of on-the-air Chapter meetings
- Details of upcoming National Convention -- with photos, as soon as we receive them
- A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
- Rules and schedule for QCWA Phone and CW QSO Parties
- QCWA Memorial Scholarship Program
- Criteria for and recent winners of QCWA Awards
- A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
- Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive
access to a variety of information related to the amateur radio
satellite program. Use your Web browser program (e.g., Mosaic) to
access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server.
In addition, various files and programs are available for anonymous
FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB

elsewhere, unless the posting was obviously a public
press release. However, posters should realize that
anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian
element sets for satellites of interest to radio amateurs.
Like the ANS bulletins, these messages are posted in a
form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should
send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current
and planned NASA space missions. Be forewarned: at times
this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases
pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and
remailing aliases is done manually. Later, this service will
probably be automated and you will have to follow a strict message
format. For now, you may send requests in free format. They will
usually be processed within a few days. In general, you will not
receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the
one in your From: header.

You should not send messages about your subscriptions to any of the
mailing lists. Send them to listserv@amsat.org instead. This
includes questions, requests for changes, requests for information
about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing
service may be obtained by requesting the "address book". Note that
the address book as distributed contains only the callsigns of the
available addressees, not their actual Internet addresses. The address

book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and
is not limited to the US. This reflects the intent to make this
directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

: >so ago when I bought my house in the San Jose area! This law
: >isn't universal either. You won't necessarily get the same treatment
: >in other states.
: >
: >The other simple fact that you are ignoring is that Real Estate
: >agents are of the same ilk as used-car salesmen! (and me doing
: >this after yelling at Burt Fisher to stop painting all CA hams
: >active in RACES/ARES with the same brush ;-)
: >
: >I'm afraid that you'll find that Jack's point of view comes
: >closer to representing reality in most states.
: >
: >Steve KA6S

: Are you telling us that your on your own regarding tower restrictions if
: no one tells you about them?

Yes.

: That you can't add conditions to any offer
: on a house in a state other than California?

No...I didn't say that. I said that the agents aren't required to
disclose the existence of CC&R's in many states. It is up to the
buyer to insist on seeing them, and due to ignorance, not stupidity,
many amateurs buy houses because they were un-informed of the
these CC&R's. The simple fact is that if you buy a NEW house, they
WILL have restrictive CC&R's which will include antennas. Notice
how absolute I made that statement. I'd love to be proved wrong on
this, but I'd bet dollars to donuts that you can't find a
new house developement anywhere in the country that doesn't prohibit
external towers/antennas in some fashion.

: The offer I made on the last
: house I bought had some blank areas to fill in where things like "the
: seller will have the carpets profesionally cleaned upon vacating" and
: CC&R's had to be reviewed. They were written in at the end of the offer
: before I signed it.

Then you were intelligent AND informed before you bought. This doesn't
negate the fact that many people don't even know what CC&R's are!

: What this tells me is that hams that live in other states are pretty
: stupid not to have researched tower/antenna restrcitions when they buy a
: house.

I think this isn't called for. How many times has the average 25 year
old couple bought a house? You may be older/wiser than this...but
you aren't allowing for experience as a teacher! Think about it for
a second...why should the average electrical engineer right out of
school know that CC&R's exist. What in his experience of going to
school and being steeped in electronics teach him about buying a
house? I chose EE mostly cuz I are one, and because that is
probably the closest profession to amateur radio(allowing for
broadcast engineers as part of that community ;-) Anyway,
change the profession to any one you like...and unless it is
Real estate _____. (fill in the blank) there nominally
won't be anythin in this persons' past to even hint at the
existence of such evil things as CC&Rs. (No smiley here on purpose!)

:When you make an offer, make it with contingencies, like, "I have
: to sell my house", "the seller will provide documentaion of all covenants
: and restrictions RECORDED with the the property" -

In CA they will, but as has already been verified...not necessarily in
other states.

:if they want to sell
: you the house they, will provide it.

Or they can just wait for the next buyer who won't be so troublesome!

:If you are willing to buy the house
: without seeing this information, you get the restrictions you deserve.

That is your opinion... you insist on claiming that if you aren't
aware that something exists, you should still be weary of it.
How?

: Again - I am talking about California - the going broker commission around
: here is 6%. That can easily equate to $6K and up. When you have a
: realtor act in dual agency (the broker represents you AND the seller) they
: are getting it all. Make them do something for you, earn the commission
: and provide the information. I don't buy the claim that realtors just
: don't want to bother with it...if they don't want to bother, they don't
: deserve the business.

Well, there has already been someone else in this thread that said he'd
gone thru several agents before someone finally was willing to deal
with his requirements to see the CC&R's BEFORE he'd make the offer!
So..go ahead and ignore the evidence...but I've already got the
existence proof!

: Once again...the information is there. Make someone give it to you.
: Nothing should sneak up on you after you buy the house in regard to
: antennas.

This part I don't disagree with. The trick is for us to educate
our bretheren to the existence of CC&R's, and teach them to be
knowledgable buyers! Don't forget...ignorance ain't a crime...and
it's curable!

: BTW- Even Dreamworld has CC&Rs - keeps out the riff raff.

In your's maybe...not in mine!

hduff@humnet.humberc.on.ca wrote:

: Blah, blah, blah....

: Are you STILL defending your anti-CW beliefs Jim ?

I don't have any anti-CW beliefs at all. I just don't swallow all that dishwater of how superior CW is, as advocated by some, to the exclusion of all else.

: You should spend half as much time enjoying CW as you do opposing it.

I don't oppose CW, but neither do I enjoy it - I am rather neutral about it. I do believe that if anyone wishes to communicate in that mode, they are perfectly entitled to do so. What I won't accept is that it is superior.

: Don't get me wrong, CW may not be as important as is was in the mid
: part of the century but it still serves a purpose in the testing and
: until it can be replaced with something that makes a person EARN their
: ticket then it shall remain. I guess the governing bodies still believe
: so anyway !! We couldn't have incompetent operators screwing up
: communications worldwide. That's the whole point of exam...
: to test for operator knowledge and competence... how to deal with
: interference, be it from local contention from the transmitter or to
: other communications around the globe.

Making a person jump through hoops just for the sake of jumping through hoops is a waste of everyone's time - both for the candidate and the examiner. Indeed, there has no evidence that demonstrating one's skill in Morse code is indeed "earning" a privilege.

: Is CW a WRONG thing ?

There is nothing morally wrong with CW; I would encourage anyone who wished to learn Morse code should do so. On the other hand, there is nothing wrong with not knowing Morse code either.

: So what that it is not the most efficient means
: of communication. It's fun !

Perhaps for you it is, but that doesn't mean that is the case for me. I find it a greater challenge and much more satisfying to contact exotic places in the world with my computer, like I had with 9M8BT yesterday morning. In other words, you are entitled to use Morse code and indeed enjoy it. But you are not in a position to say it will be fun for me.

It's not impossible to learn mind you the
: lazy or stupid might disagree...I guess they're the ones who might also
: not understand how to deal with interefence problems...
: "I want HF phone privs but I don't want to have to work for it."

But that is not my perspective, and I daresay, the perspective of the most, if not all of those who do not agree is compulsory Morse code testing for access to the HF bands. I do not argue that priviledges have to be earned. However, there is no evidence that Morse code testing does indeed have any relevance to the earning of those priviledges.

: I gave many examples of why CW is still useful in Amateur radio...
: I never heard any reasons as to why it should go. This is my rudimentary
: question. ("Because its outdated" is a weak reply.")

Why is it a weak reply? If it is outdated, then it should be justified to indeed continue its testing. Make no mistake - I do not advocate the abolition of Morse code by regulation as a form of communcations in the amateur bands. I think the use of Morse code will be relegated, in the future, by a few users who wish to use it, in similar manner to those who preserve the use of amplitude modulation by S.P.A.M. - the Society for the Preservation of the Amplitude Modulation. However, there have been no convincing arguments to continue to test for the knowledge of Morse code for access on the MF/HF amatuer allocations.

From: pixel@lemax.inet.it
Message-ID: <3vlgue$1rcc@venere.inet.it>
Source record: 241297

I've found some undocumented behavior while trying to get my
ICOM IC-2340H do cross-band repeat operation.
And how I can have the expanded reception coverage ?

Does anyone know these and other undocumented features for this model?
Ora good ftp site / web where I could get this info or from where I
could get to a place where related info can be found?

I would be really happy to get this info!

Replies may be sent to: pixel@lemax.inet.it

For what it's worth, I ordered some items from AES Milwaukee last Friday (they haven't yet arrived, but that's probably because UPS hasn't arrived at my building yet) and spoke for a bit with the gentleman on the other side of the phone. He said that:

a) There are AES employees watching this discussion
b) There have been memos sent out *and*
c) He personally was watching himself carefully. I don't remember his name; he was very polite.

The upshot being: at least AES knows about the problem, and is going to make at least a token effort to fix it.

I know that HRO employees are on the net. Has anyone called up HRO to order anything recently and asked them about it?

I also know that Radio City is on the net, but I haven't seen many complaints about them.

The simplest solution is that your PKUNZIP is too old. The latest is
PK204G, and should be available from various BBSs or on the Net. I can
verify that the older PKUNZIP will NOT unzip the newer .zip files. The
reverse, however, is true - the new version will unzip the older ones.

Yes, he's happy, just as you're happy that there are Morse Code beepers and Voice Box Squawkers with whom YOU can talk. What is the big deal? If Gary doesn't want to talk with the morons on 14.313, will you take offense at that?

Since when is the thrust of Amateur Radio to "improve the human condition"? Your argument is so specious and weak that you must resort to silly _ad hominem_ attacks on Gary to further your silly point.

All computers-talking-to-computers are doing is moving the communication one level of abstraction up. It's still *people* who tell the computers to communicate with another (for now). I mean, we communicate via computer over Usenet, why is that so much different than ham radio? Is it so much more personal when you see my voice? (I suppose if we were using ATV in real time I would argue that THAT is somehow more "personal".)

>You appear to be a technical wizard, Gary, and you obviously put more

There's no problem with that, so long as these operators don't blindly cling to one form of communication, claiming it is the best for this or that or

whatever, even when they've been proven wrong.

There's nothing wrong with beeping along in CW (Even Gary did it!) at all. Just don't claim that it is the be-all-end-all-alpha-omega-savior-of-ham-radio.

<snip>

So, if I read you correctly, we should give up Morse in favor of being highly skilled at the radio art of operating a digital appliance. Hmm...
- typing
- plugging multi-pin D connectors together
- inserting floppy disks correctly
- running Windoze (or whatever)
- plugging option cards into the back of the PC

Sounds like an exciting future ahead. Yawn.

Seems to me if we're going to talk "training" or "skills in the radio arts", we should teach the basics. Skipping from "this is a resistor" to "error correction algorithms for digital data" teaches squat. I have been putting myself through the exercise of building from scratch a 40m CW receiver for the past few months... I'm taking my time and learning as much as possible about every circuit I use, the options available, the effects on performance, etc.

You don't get this from a TNC. Learning communications on a simple, basic level, like CW, is the first step to going on higher to fancy modulations and data encodings, if you wish to pursue them. I ODed on computers at work a long time ago, so having one do the communicating for me doesn't really excite me.

BTW, lest you think I'm totally anti-digital... one of my next projects will be a PLL controlled VFO, preferably programmable in some way.

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Greetings from ARRL headquarters!

The services that the American Radio Relay League provides via the internet include a World Wide Web page, an FTP file archive site, an automated email information server (Info-Server), a number of email mailing lists and direct email to most HQ staff. If you have any questions about the following information, please send them to me at mtracy@arrl.org.

Best regards - Michael Tracy, KC1SX, ARRL Technical Information Services.

* World Wide Web (URL http://www.acs.oakland.edu/barc/arrl.html)

The ARRL's Web home page is provided for by the generous folks at Oakland University in Michigan. This page, maintained by Scott Ehrlich, WY1Z, of the Boston Amateur Radio Club, features the following information links:

Access to our FTP archive files
The ARRL and our membership services
Lists of upcoming license exam tests
The complete text of FCC rules Part 97
Contacts for volunteers who assist with emergencies and disasters
ARRL sponsored hamfests and conventions listing
ARRL sponsored contests
The latest ARRL Letter
Links to the web pages of ARRL affiliated clubs
W1AW bulletins
...and more!

* FTP archive site (oak.oakland.edu)

This FTP site (also at the University of Oakland) currently contains a complete mirror of the files on our Email Information Server. It also features a growing number of files from the ARRL telephone BBS.

To access this site, FTP to oak.oakland.edu. At the "login:" prompt, type ANONYMOUS and at the password prompt, type your email address. Change directory to pub/hamradio/arrl/infoserver and get the file index.txt for a listing of what files are available (and in what directories!)

* Email Information Server (info@arrl.org)

The Email Information Server (Info-Server, for short) is an automated mail server that gives you access to many text files relating

to various facets of Amateur Radio. To obtain more detailed instructions
and a list of available files, send an email message to info@arrl.org
with any subject (it is not used) and the following text in the body
of your message:

HELP
INDEX
QUIT

Each file you request is then mailed to you automatically.

* Email Mailing Lists (listserv@netcom.com)

The following email lists are distributed by Netcom internet services
and are sponsored by Mike Ardai, N1IST, and the Boston Amateur Radio
Club. If you have any questions about these lists, please direct them
to Mike Ardai, N1IST at n1ist@netcom.com. For more information on the
Boston ARC, subscribe to barc-list.

arrl-exam-list: Amateur radio license examinations scheduled in the US
and in some foreign areas.
arrl-nediv-list: Bi-monthly bulletins from the ARRL NE Division director
arrl-special-olympics: Information about amateur radio's involvement in
the
Special Olympics
arrl-ve-list: Announcements to VEs and VE teams.
barc-list: Information, discussion and announcements for the Boston
Amateur Radio Club and hams in Eastern Massachusetts.
barc-races: RACES in Massachusetts and emergency management
ema-arrl: ARRL Eastern Massachusetts section discussions
fieldorg-l: ARRL field organization discussions
fox-list: Fox hunting and Radio Direction Finding
ham-tech: Technical discussions and questions about Amateur Radio
ky1n-list: VE exams in New England
letter-list: Redistribution of the ARRL Letter
newsline-list: Redistribution of Amateur Radio Newsline
w1aw-list: ARRL bulletins, news, and information

These lists are automatically maintained by the Majordomo software. To
sign up or inquire about these lists, send mail to listserv@netcom.com
with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.

To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information about a list: info <listname>
For more information about Majordomo: help
To post (to the two-way lists), send your message to <listname>@netcom.com

* Headquarters Email for the American Radio Relay League

The complete list of HQ email addresses can be obtained on the
Internet via:

World Wide Web (http://www.acs.oakland.edu/barc/arrl.html) -
Click on the "Contact information" link.

FTP (oak.oakland.edu) - At the "login:" prompt, type ANONYMOUS and
at the password prompt, type your email address. Change directory
to pub/hamradio/arrl/infoserver and get the file hq-email.txt.

Email (info@arrl.org) - Send an email to info@arrl.org with any
subject (it is not used). Put SEND HQ-EMAIL.TXT on a line by itself
in your message. For a set of instructions on using the email server,
add the word HELP on another line by itself.

Best Regards, Michael Tracy, KC1SX, ARRL Technical Information Services

Your local library may have a complete set of the Code of Federal Regulations
in the reference area; look for Title 47. There's maybe 5 volumes in
Title 47, Part 15 is in the first volume. You can also order this
book from the Government Printing Office for something like $20.

>100 watts, use 3 element yagi antennas, and, of course, digital coding.

This is quite an improvement over the hardware I've read about--I
recall about 300 watts for the slave and a kW for the master.
W1AW used to use one of the kW amps for its 6M bulletins. Running
300 watts off solar power isn't too difficult if the duty cycle is
kept very low.

>
>This operation is most efficient if done duplex, with the master's

>on all but the longest paths. Not a lot of power is required because
>when a meteor trail is present the reflection is strong, and when
>it is absent the scatter signal is too weak to be detected anyway.

However, talking to people who run amateur meteor scatter,
high power is a definite benefit. You can take advantage
of poorly located or very small meteors to indicate to the
other station that you are on frequency and trying to make
a contact via the bits and pieces heard. Thus, when you do
get a trail good enough for the contact, the other station is
ready to make the contact. Of course, this is isn't much of
a concern with a fully automated system with accurate time
and frequency standards.

2063. Recent radio related trivia...

For the last two weeks, I've been on holiday. For the first week we (i.e., me, the wife and the three kids) went to the Oregon coast. We happened to visit the US Coast Guard station in Newport. Nice folks, gave us a great tour, including the communications room. I asked the comm officer when the last time he used Morse was, and he looked at me quizzically. They don't even have a key in the comm room; they primarily monitor VHF marine and CB channel 9. So, if you are in distress off the Oregon coast, make sure to be prepared either with a VHF marine radio or a cheap CB radio. Don't waste your time trying to get help with Morse code :-).

Later on, we went to the Monterey Bay, and one of the places there we visited was Pebble Beach and the 17 mile drive. I was quite surprised to find out that Pebble Beach as established by Samuel F. B. Morse to conserve the natural beauty of the area. There's even a Samuel F. B. Morse Drive. I wonder what kind of CC&Rs they have there against amateur radio antennas?

2064. Re: RF/Coax Relay Design ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-01 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1995Aug1.140152.21657@ke4zv.atl.ga.us>
Source record: 241308

In article <1995Jul31.153648.20320@ned.cray.com> molson@cray.com writes:
>Can anyone out there help me find out what makes a RF relay, a Rf relay?

Usage. It's used to switch RF. Whether it's an ugly old open frame relay, a reed relay, a "coaxial" relay, or a high buck vacuum relay, the only thing that makes it an RF relay is that it's used to switch RF. Some relay styles are better suited to particular RF switching applications than others, but all types are used in some piece of equipment somewhere.

>My understanding of the design so far is that an RF relay has either the contacts
>enclosed (shielded) or that the coil is shielded from the contacts.
>
>I would like to learn the design parameters of Rf/Coax relays for use at VHF
>and UHF frequencies, and possibly build a few.

Coaxial relays have special constraints. While any type of relay can be used to switch RF, most types have to have their reactances compensated (often by being included in the equipment's input or output network impedances). A coaxial relay *should* be a constant impedance equal to the characteristic impedance of the cable type with which it is intended to interface along its closed contact path at all frequencies over which it is intended to operate. And a coaxial relay should maintain shield integrity. The latter is a fairly simple requirement, the former often is not. Depending on the switching configuration required, IE SPST is pretty easy, SPDT a bit harder, and SPxT, where x is more than 2, can be difficult indeed at higher frequencies.

There are two main types of coaxial relays, the longitudinal cavity type, and the rotary type. The most commonly seen coaxial relay in amateur circles is the SPDT longitudinal cavity type. The RSGB VHF/UHF Manual has machine drawings for constructing your own SPDT longitudinal cavity type coaxial relay from silver plated brass bar stock. This is a fairly challenging project for the home machinist. Because of the necessarily small switching movement of the swinger, in order to maintain as close to a constant impedance as feasible, longitudinal cavity coaxial relays are generally limited to rather low power and have rather poor isolation ratios. A high power rotary design is an even greater challenge, containing as it does convolute curves, but it can be designed to switch higher power levels and have much higher isolation. RCA used to make some 50 kW ones intended to switch 6 1/8 inch rigid coaxial lines that were real works of art.

Unless you have a home machine shop, or access to a professional machine shop, you'd better just haunt the surplus bins for your UHF coaxial relay needs. Transco is one of the better names, and you can often find SPDT Transcos for as little as $20 at fleamarkets. That's considerably cheaper than you can build your own. Many of these are ex-military contract items and use 28 VDC coils. It is practical to change out the coil to a 12 VDC coil at home. Or you can just build a 28 VDC relay supply.

2065. Shocking DIA experience.

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-01 00:00:00 UTC
From: miller@polaron.physics.colostate.edu
Message-ID: <3vlt97$967@polaron.physics.colostate.edu>
Source record: 241309

I had a really shocking visit to Denver International Airport last Monday. I had driven to Denver from Fort Collins to give a talk at a chemistry conference. My symposium was over at about 5:00, and a reception was scheduled to follow. I asked myself whether I would rather stand around, eat free food and drink free wine, or go watch airplanes. I decided to go watch the planes.

I had read a report on the net several months ago that there was a little-publicized public viewing area somewhere west of the airport, and I decided to go exploring and look for it. I didn't remember the directions on how to get to this place, but had a rough idea of where to look. I drove up Pena Blvd and got off on Tower Road and headed north. Eventually, I wound up heading east on 88th, and came upon four airport comm towers and the radar tower. Just beyond the radar installation is a big sign that points south and says something like "DIA public observation platform". I drove south about 1/2 mile on a dirt road. Sure enough, there is a parking lot with a wooden observation deck build on top of a 10 foot high dirt mound. There is a paved trail with a handrail leading up to the platform. It is about 1/2 mile north of runway 07/25 and about 2 miles directly west of the south end of the main terminal building.

The weather was warm, with scattered CU, bases at probably 10,000 agl, and sun was shining brightly. Unfortunately I didn't have my scanner along, but I did have my 2-meter ham handheld, so I decided to see if I could hit the CSU repeater in Fort Collins, which is about 50 miles north of DIA. With the rubber duck, I couldn't get any response, so I put on the 1/2 wave ASA Hot Rod antenna. This is a collapsible metal antenna which when extended gives very good performance. I could now hear people talking on the repeater, but still could not get in.

As all of this is going on, I am getting a great view of the departing traffic. Watched United DC10, A340, 737s, Beech 1900, and various assorted other aircraft taking off from the nearby runway 25. I was as happy as a pig in mud.

Now for the "shocking" part. During all of this, I was getting lots of interference from other Denver area repeaters on nearby frequencies, as well as some intermod from what sounded like paging systems. At one point, however, the radio began making a very strange buzzing sound. Simultaneously, I got this very strange feeling, like a swarm of bugs were surrounding my head. A few sprinkles of rain fell, and I looked up at the cloud above me and saw that it had grown into a towering CU and was beginning to produce rain. I touched the

metal handrailing of the deck and got a very noticeable electric shock. I realized that the strange buzzing sound was not coming through my radio's speaker, but from it's antenna! And those bugs swarming around my head were not bugs at all, but static discharges jumping from my head! Holy shit, here I was standing on the highest point within a mile under a developing thunderstorm. I dropped the radio and assumed the "grab your ankles and get ready to kiss your butt goodbye" position. For some reason, one of the first thoughts in my mind was that if I get struck, it is going to burn a hole in my brand new suit. I began to move toward the car, trying to stay as low as possible, below the level of the handrailing. About the time I got back to the car, the storm had passed to the east and the danger was over. I went back up and watched some more planes for a while and then headed home.

Don't forget too look up!

I would not use rebarb that is part of a foundation as a grounding point.
If you did happen to have a direct hit, it could cause your foundation
to shatter/crack/explode.

>Nope, not as long as there are other requirements to get on the air.

If you remember back in the 70's before "Smokey and The Bandit"
glorified CB radio, the FCC actually required you to file a license
application form, pay $5, and attest that you've read the applicable
laws etc. regarding CB radio. You could call these "requirements" to
getting on the air as well.

>Why should I? I didn't have to walk to school 10 miles, through a raging
>blizzard, both ways, like you did. Life got better. "I did it" is no reason
>to keep a requirement.

No, I agree with you. But what many code-afficinadoes(sp?) see is an
overall weakening of the structure of amateur radio by "dumbing down"
the requirements in response to increasing pressure by a society the
Japanese accurately described as "lazy".

I support the code requirement. I would also support relaxing or
eliminating the code requirement if someone could provide a
better alternative and we could insure that what happened to CB
radio when the FCC eliminated the licensing requirements won't
happen to amateur radio. Unfortunately, from what I've personally
seen over the past three years, just the relaxing of the code
requirement for a tech license has created a whole subculture
of transplanted post-1970's CBers complete with their bad habits
and foul mouths (I also realize that in other sections of the
country the no-code license has done alot of good.)

Followups to .policy.

You can take the General theory now and you'll have 365 days to pass
the code portion. You can not however use the general privledges until
you've passed the code portion.

I recently worked XJ3AT and can't find any references for XJ. My logging program says this is a Canadian call but no other QSL references on the Internet supports this. There was quite a pile-up and I thought I was lucky to get the call. I listened for several minutes for additional info from the operator but all he sent were signal reports and 73 T U. If anyone else remembers working this station I would appreciate an e-mail with QSL info.

Thanks ES 73

A number of years ago, there was a really cool lightning storm
in the Los Angeles area on a Saturday night. The geek that I
was, I happened to be at work, which was located next to the
Santa Monica Airport. There were all kinds of cool lightning,
like stuff out of Close Encounters of the Third Kind, and I wanted
to get a better look, so I rode my GSXR up to the top of the
tallest parking structure nearby (yeah, I knew what the risk
of doing this was).

It wasn't raining at first, and it was neat seeing the lightning
dance around the clouds, and strike trees and power poles, most
of which would glow for a few seconds afterwards. Anyway,
this other guy shows for the same reason. We started counting the
delay from flash to thunder; when it got under three seconds
we were kind of concerned, but a few bolts struck the airport
where the flash and the thunder had only a few hundred milliseconds
of delay which was very dramatic.

Anyway, the other guy says "Hey, look at your hair! It's standing up!". His was, too, even though it had started raining and our hair was pretty wet and heavy. I said "Uh, we better get down from here" and he bolted for the stairwell. I nonchalantly started up my GSXR and rode under the top level of the structure. Right then, there was this very loud crack and bright flash around the entire perimeter of the structure. There was little, if any, thunder. I'm willing to guess I was less than 10 seconds away from beyond struck...

ARRL Bulletin 76 ARLB076
From ARRL Headquarters
Newington CT August 1, 1995
To all radio amateurs

SB QST ARL ARLB076
ARLB076 Hurricane Erin update

Hurricane Erin is expected to hit the lower central east coast of Florida late Tuesday evening or early Wednesday morning. As of 11:00 AM EDT Tuesday, Erin is a Category 1 hurricane on the Saffir/Simpson hurricane scale. Amateurs are advised to monitor NOAA weather radio for storm coordinates, track and other information.

ARRL Southern Florida Section Manager Robert Van Winkle, AA4HT, reports that a regional net is in emergency session on 3940 kHz, with 7247 kHz as a back up.

The Hurricane Watch Net is active on 14325 kHz.

Amateurs are advised not to transmit on these frequencies unless directed to do so by Net Control Stations.

>dismay, they no longer include a large rubber washer to seal the gap between
>the bottom of the antenna and the roof of the vehicle.

Larson also sells caps that fit over the NMO mount for when it's not in use. These covers come with a rubber washer made specifically to fit on the NMO mount. They're about $3 at HRO.

I have 5 in my glove compartment to go in place of my antennas when going thru the car wash. One of my antennas didn't have a washer either so I just keep a washer from one of the covers on the mount with the antenna.

I'm pretty sure you can buy just the rubber washers from Larson, I think I saw them in the Larson catalog but I don't have it here at work with me. You could give them a call, they've always been very helpful when I've called (Larson Electronics: 800-426-1656 or 206-944-7551).

>your mode". In this regard, Morse beats the daylights out of those
>modes. Technical superiority? Nah. Current communications
>superiority? Yup.

You are right; but sometimes it works against CW-only bigots.

Ops who only operate CW or phone may find TY, Benin, comparatively
rare these days. Chod's most wanted countries list in the DX Magazine
shows it.

However, Peter, TY1PS, comes up all the time on steam-powered RTTY, Pactor
and (get this, you folks who think that only hams from first world countries
own computers) Clover.

I work three of the more common modes, and have countries which I have
only worked on RTTY, countries which I have only worked on CW and
countries which I have only worked on phone.

I'm trying to learn code also. Sometimes I associate "tunes" to specific characters. For example, one of my co-workers suggested I associate "Shave and a Haircut" with the "/" so it goes dahdididahdit. I associate "V" with the first four notes of Beethoven's Fifth -- didididah. Then I began to wonder...The letter "V" is also the Roman numeral five...The character "V" sounds like Beethoven's Fifth. Hmm...Reckon Samual Morse did that on purpose? Nah...I reckon it's just the code driving me mad.

Subject: ** ATTENTION EPA/SNJ REPEATER OWNER **
From: wb2din@wt3v.nj.usa.noam (Bob Reed)
Message-ID: <10463_WT3V> (Toms River, NJ)
To: qst@nebbs

To ALL Repeater Owners and
Club Officers Sponsoring Repeaters

Over the last year there has been an attempt bby several
repeater owners in this area to establish a new amateur
repeater coordination council covering the Eastern
Pennsylvania and Southern New Jersey ARRL sections.
The action undertaken by a group called the Amateur
Repeater Coordination Council of EPA/SNJ has come about
by the virtual abandonment of responciblity by TPARC, the
Philadelphia Area Repeater Council, which had been
representing the area for the past 10 years.

From the outstart of this action to create a new coordination
council I opposed the activity on the basis that TPARC was the
FCC recognized entity for this area. Regardless of what abilities
and backing ARCC had, it did not obtain by what the FCC had
previously stated to the ARRL and others the proper transfer of
authority to represent the area.

Over the last several months I have had several telephone
conversations with Gerry Smedley WB3BLG to spur some activity
by TPARC to perform its job and lately to find out why TPARC would
not work with ARCC for the benefit of everyone in the area.

It is now safe to say that the people making up TPARC are not
functioning as a repeater council and have avoided any meetings
with ARCC to discuss the few disagreements that they say exist.
Over the last 3 months TPARC has agreed to meet and for each
date has not announced where they would like to meet.

It appears that TPARC is deliberately avoiding a meeting.

Last month it was agreed that TPARC would contact ARCC to
discuss the remaining differences of opinion. Gerry Smedley
was offered the chance to pick the time and place but this has
not happened. Gerry asked and I agreed to act as a mediator
for this meeting. Everything has been done by all parties to
give ultimate courtesy and appreciation to TPARC but they have

avoided any discussions and have not performed their tasks
now for almost a year.

ARCC has agreed to sit the 5 band coordinators from TPARC in
the same position within ARCC to ensure continuity. I have
suggested and recieves a warm reception to allowing them to sit
in those offices for 2 years before elections were held for those
offices. TPARC's current coorinators would have the same
authority as before but now be accountable to the FM repeater
community under a set of public by-laws.

ARCC has also agreed to remove its decision to allow 1 MHZ
repeaters if that is TPARC's stumbling block.

Conversations with TPARC yield agreements as to their knowing
that they need to work with the FM community but at this point the
5 people who make up TPARC have held the area repeater owners
from any protection afforded by coordination by failing to act.

To allow 5 people to hold this area at bay CAN NOT be allowed
to continue.

There are steps now in process to deal directlt with the FCC and
ARRL to determine how to effect a solution to the problem. In the
mean time I am publicly announcing my support of ARCC as the
bonafide area coordinator for this area and will be working for their
approval by the FCC.

I urge anyone else involved with repeaters to contact Gene
Pressler W3ZXV at (215) 646-5892 and volunteer your support.

Huh? Go away because he is (or might not be) not a ham? Just because he doesn't like towers in his neighborhood? A bigot? Did he ever mention that he didn't like hams? - not that I recall.

He didn't include his call sign? So what. Do you have to ID at the end of any Amateur newsgroup posting? Or every 10 minutes when posting articles?

If you only want to hear "from your own kind", stay in your on world - stick to packet.

2095. Strange problem with HTX202 and 1 repeater

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-02 00:00:00 UTC
From: wejones@cbda9.apgea.army.mil
Message-ID: <9508021102.aa22501@cbdcom.apgea.army.mil>
Source record: 241139

Hi
Wanted to find out if anyone had any idea of what might be the cause of what I have been observing. I have an HTX202 that I use regularly on a variety of local repeaters and on packet, simplex, etc, and have had no problems with it. We routinely vacation in a remote location where there are several repeaters that use pl tones (none of my local repeaters use pl tones). On previous trips I have used the HTX202 to call one repeater that uses a 100 HZ pl tone, but with one repeater, even though I could receive it adequately, I could not bring it up with the 202, even though I could use it with 3 other radios (2 Alincos and a Yaesu). I assumed that the 100 HZ tone in the 202 must be off freq or low in amplitude, but when I experimented using tone squelch using at least 4 different radios, it worked fine in all cases. I assumed then that I must just have a marginal signal into the repeater in question. This trip, however, I put up an improved antenna, so that I get full scale reception on this repeater. Now, I can bring up the repeater with the 202, but no audio goes through the repeater, ie the repeater just has a dead carrier when I am talking! Again, the repeater works fine when I access it via one of my other radios, and I can still work other repeaters and other radios in tone squelch mode fine using the 202. I seem to have ruled out a problem with my 202, and I also seem to have ruled out a problem with the repeater. I am still assuming that the problem involves the 100 HZ pl tone, but can't understand why the repeater seemingly hears the tone enough to bring up the repeater, but not enough to allow audio through. The only thing I can think of is that the deviation may be a bit wide on my HTX202 and the bandwidth on the repeater may be on the narrow side, and all the other radios I experimented with are intermediate, ie I have seen situations where a wide deviation transmitter sounds like a dead carrier when received with a narrow band receiver. I have been told that the repeater in question was using pl tones because it was having intermod problems, so it seems possible that the repeater op narrowed down the bandwidth to avoid interferrence. I have observed packet signals from the 202 on a scope, and the audio does not seem to be over-modulated, but I don't have access to a deviation meter.
Does any of this make any sense? I intend to eventually contact the repeater op and see if he can monitor my signal, and intend to try to determine if the deviation of the 202 is excessive by tuning through the 202's signal with a narrow band receiver, but wanted to see if anyone had any other ideas that I might investigate?

Thanks in advance, de N3JLQ wejones@cbda7.apgea.army.mil

I found this some time ago, I am not the author, just seem to have kept
it for the past 6 months.

==========

Here is an interesting article I picked up from a local BBS. Seems
like the best explanation I have heard regarding the name "Ham".
Guess if some one really wanted to check it out they could go to
the Congressional Record for the dates listed as well as newspapers
of the time. Anyway it sounds good. Hope you enjoy.

WHY RADIO AMATEURS ARE CALLED "HAMS"
From Florida Skip Magazine - 1959

Have you ever wondered why radio amateurs are called "HAMS"? Well,
it goes like this: The word "HAM" as applied to 1908 was the station
CALL of the first amateur wireless stations operated by some amateurs
of the Harvard Radio Club. They were ALBERT S. HYMAN, BOB ALMY and
POOGIE MURRAY.

At first they called their station "HYMAN-ALMY-MURRAY". Tapping out
such a long name in code soon became tiresome and called for a revision.
They changed it to "HY-AL-MU", using the first two letters of each of
their names. Early in 1901 some confusion resulted between signals
from amateur wireless station "HYALMU" and a Mexican ship named
"HYALMO".
They then decided to use only the first letter of each name, and the
station CALL became "HAM".

In the early pioneer days of unregulated radio amateur operators
picked their own frequency and call-letters. Then, as now, some
amateurs
had better signals than commercial stations. The resulting interference
came to the attention of congressional committees in Washington and
Congress gave much time to proposed legislation designed to critically
limit amateur radio activity. In 1911, ALBERT HYMAN chose the
controversial WIRELESS REGULATION BILL as the topic for his Thesis at
Harvard. His instructor insisted that a copy be sent to Senator
DAVID I. WALSH, a member of one of the committees hearing the Bill.
The Senator was so impressed with the thesis is that he asked HYMAN
to appear before the committee. ALBERT HYMAN took the stand and
described how the little station was built and almost cried when he told
the crowded committee room that if the BILL went through that they
would have to close down the station because they could not afford the
license fees and all the other requirements which the BILL imposed on
amateur stations.

Congressional debate began on the WIRELESS REGULATION BILL and
little station "HAM" became the symbol for all the little amateur
stations in the country crying to be saved from the menace and greed of
the big commercial stations who didn't want them around. The BILL
finally got to the floor of Congress and every speaker talked about
the "...poor little station HAM". That's how it all started. You will
find the whole story in the Congressional Record.

Nation-wide publicity associated station "HAM" with amateur radio
operators. From that day to this, and probably until the end of time in
radio
an amateur is a "HAM"

I recently heard the expression "DX Criminals" from an important DX friend who lives in Hong Kong. I would never number Republicans, or even Democrats, into such a rank, but instead ask who wouldn't agree with applying the expression liberally to the List Lizzards and Net Nurds that hang out on 14,247? The epitome of DX crime took place today when the Head Man WA4JTK had the audicity to beg and plead with TI9JJP to give him 6-7 blank QSL cards from TI9 for him to fill out himself and give to fellow "DX" net control friends!!! Anyone listening in could tell that the DX station was embarrassed by such a shameful request. With there being only 2 other net controllers present at the time who might have worked the TI9 station, then why does this guy need seven blank cards? The Alanistas themselves who heard this inane exercise in groveling must be ashamed to receive QSL cards in this fashion. The TI9 station handled the situation rather well: he politely excused himself for dinner then QSY'ed to a regular DX frequency.

This kind of activity has indeed served to cheapen, degrade and pollute the DXCC program - so maybe with all the rumblings about an overhaul of the DXCC program, there's hope for reform.

This information should also be in the 1995 Ham Radio Almanac which is published by CQ. The last time I looked they even had a breakdown of the number of Amateurs in each US zip code area!

SB SPCL @ ARL $ARLX036
ARLX036 2 meter record claimed

ZCZC AX06
QST de W1AW
Special Bulletin 36 ARLX036
From ARRL Headquarters
Newington CT August 2, 1995
To all radio amateurs

SB SPCL ARL ARLX036
ARLX036 2 meter record claimed

An overwater distance record on the 144 MHz band has apparently been set between Hawaii and Washington state.

On July 1, 1995, Paul Lieb, KH6HME, on Mauna Loa volcano, worked Jim Costello, W7FI, in Woodinville, Washington, near Seattle, a distance of 4333 kilometers. The previous record was set between KH6HME and XE2GXQ, on Baja California, a distance of 4276 km, on July 13, 1989.

This tropospheric ducting opening began June 28 when the 144.170 MHz beacon on Mauna Loa, 13,680 feet (4170 meters) above sea level, was heard on the West Coast, according to QST VHF columnist Emil Pocock, W3EP, who called the next three days ''the most widespread Hawaii-to-West Coast opening ever recorded.''

In the early evening of June 30, KH6HME worked WI7Z and N7KSI, both near the coast of Washington, the first ever 144-MHz contacts from that state to Hawaii, and then worked N7AVK, in Oregon. The breakthrough came the next day, at 0600, when KH6HME worked several Seattle-area stations, beginning with W7FI, and was heard by VE7SKA, who could not make himself heard in Hawaii.

Using computer software, the various Seattle-area stations calculated who was the farthest from Mauna Loa, and the winner was W7FI. The record-setting distance was 58 km farther than the six-year-old record.

Unfortunately, the conditions did not extend to higher bands; KH6HME made 432 MHz contacts with K6QXY and W6SYA, but no others were completed.

> think it would take to get up to 13wpm ? Please e-mail me.
> I thank you all in advance for any help you can provide.
>

Congrats on the 5wpm !
The best way to improve your CW proficiency is to get on the air and
make some contacts. If you don't have a transceiver yet but do have a
receiver then try copying some actual CW QSOs. And if you don't have a
receiver then I suppose a morse tutor would have to do.

When just listening, the thing to do is to copy CW just above the
level that you are comfortable with...you'll miss occasional characters
but it tunes you in to the faster tone patterns and soon you'll be on top
of it.

These suggestions come from my personal "It worked for me" files !

Regards..Hugh VA3TO Toronto

2105. Repost: Hams who speak/write a language other than English

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-02 00:00:00 UTC
From: skremer@iquest.net
Message-ID: <DCo0Jo.AnF@iquest.net>
Source record: 241196

THIS IS THE SECOND POSTING OF THIS ITEM, I PROMISE THIS IS THE
LAST. SPECIAL THANKS TO BILL FREY , KB8UNC FOR HIS DUTCH
TRANSLATION.

My QSL card shows a photo of the car that won the first running of the
Indianapolis 500 in 1911. The card also carries a caption (see below) with
some history of the car. I had the caption translated into Spanish and
French,for my contacts who speak those languages as their primary language.

Recently I have put up my own Home Page, "Amateur Radio & Funny Stories"
at

http://www.iquest.net/~skremer/

Keeping up with the international tradition of amateur radio, and for the
fun of it,I thought I would try to have the caption translated into as many
languages as possible.

I have already had it translated into Espanol (Spanish), Francais (French)
Dutch,and Deutsch (German)

So if you write a language other than English, if you could translate the
four following items and E-mail it to me I would appreciate it very much.
Your translation will be converted to HTML, the computer language, so if you
are familiar with HTML and could convert any unique characters to their HTML
code that would be a help.

1.

Carmel, Indiana is a suburb of Indianapolis. Pictured is #32, the
Marmon Wasp driven by Ray Harroun to victory in the firstIndianapolis
500 auto race in 1911. Above the steering wheel is the first ever rear-
view mirror on an automobile.

2.

Translation courtesy of: (your name and call sign)

3.

Back to Steve's Home Page.

4.
(The name of your Language, in your Language) (ie. Espanol = Spanish)

Thank you and best 73,
Steve Kremer, KF9ZA

>anything recently and asked them about it?
>

Well as far a HRO goes, in one of their stores they had to move all their Repeater Pocket books behind the counter because too many of those small pocket books were being stolen (must be those scanner people - hihi).

The point is that there more sides to the story then that being given here.
In fact the best thing an AES or HRO person could do that reads this thread
is to say nothing, else he/she would be a target.

I was born in Milwaukee and can remember when AES was the place to go for ANY electronic needs, TVs, Microwaves, parts, etc. When I get back in town and go to their Good Hope Road store I have ALWAYS been treated right. Yes the phones are ring, they of course do a great deal of mail order.
But I was always waited on without major delay, and once a saleman started to wait on me, he stayed with me till I was done. What more could someone want?

HRO in Virginia has treated me the same. In fact the guys behind the counter hear about how well my dog was trained that they asked me to bring her in and "DEMO" to then a well trained dog. Now that's down right personable. Again, what more could someone want? If you want to be a pen-pale to an AES or HRO sales guy, catch them on packet!!!

Regards,
Horrock

Almost 100 years ago there was a American magazine called the " Home
Amateur Mechanic " An article appeared in this mag about how to build a
newfangled wireless radio. People who built and used these radios started
to be as "Ham" radio people after the magazine's first letters.

2115. Digest of Articles - QST June 95 (Long - 44k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-02 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <3vnjsd$rtp@horus.infinet.com>
Source record: 241206
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the June, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Voice-Track: A Multifunctional, Talking Repeater Controller - Part 1
Author>Bonello, Alexander - LW2EET
Source>QST Jun 95, pp. 27-32
Abstract>Design and construction details of a remote control system for radio repeaters.

Digest>Repeaters, ubiquitous on VHF/UHF bands, continue to become more versatile and powerful. More functions are provided; more peripheral equipment, remote receivers, and radio links between repeaters are becomming common. Since it is not possible for the operators to perform routine control functions at transmitter sites, often on the crests of mountains or atop tall buildings in the centers of cities, remote control is a necessity.

LW2EET, in this article, presents design and construction details for a highly versatile remote controller. Operating software is written in assembler language and embodied in plugin ROMs, allowing for convenient modifications and future expansions.

Although the operation of the controller is extremely sophisticated, the circuitry is almost completely contained in VLSI chips on a single PC-board and the hardware construction is not an exceptionally difficult task. However, the use of a double-sided board with plated-through holes and with components mounted on both sides makes constructing it a task that should be undertaken only by experienced builders.

The software provides the following features:
1. A speaking S-Meter
2. Voice identification
3. Maximum-operation-time announcement
4. Shutdown control
5. Control of peripherals
6. Phone-patch control
7. Full code squelch and pager functions

The speaking S-Meter, when activated by a calling station, reports their received signal level by speaking, for example, "You are reaching the repeater with an S-5 signal". Voice identification is triggered by a timer, or manually by remote actuation. The voice track provides a maximum-operating-time control and gives a verbal warning before shutting down a user who is approaching the time limit.

It also contains the logic necessary for operating phone patches. All patch functions are under remote control by the system operator including changing the access code, when necessary. This makes it possible, for example, to require a different access code for every day of the year; authorized members can be given a mathematical formula to derive the access code from the month, week, and day.

The author is making available a complete kit of parts, including the PC-board, preprogrammed chips, and other parts. The entire kit is priced at $203, including domestic shipping. Payment is required by

checks drawn on US banks.

Title>TA2:An RF Step Attenuator
Author>Bramwell, Denton - K7OWJ
Source>QST Jun 95, pp. 33-34
Abstract>Construction information for an step attenuator, with range from 1- to 71-dB., usable to frequencies as high as 450-MHz.

Digest>Anyone who is doing serious serious experimenting in receiver design and construction, antennas, or other electronic work involving RF circuits will recognize the need for an accurate RF step attenuator. Commercial ones are prohibitively expensive for most amateurs, but K7OWJ has designed and built an effective unit that provides up to 71-dB. attenuation, adjustable in 1-dB. steps. It is usable at all frequencies up to 450-MHz.

Stepped resistor insertion boxes are inexpensive and easy to build for operation at d.c. Each resistance step is provided by a resistive "T-pad" switched in and out with a DPDT switch. The problem becomes difficult at RF because it is necessary that the box, itself, not introduce reactance into the circuit. With all of the switches set to zero resistance, the attenuator should act electrically like a short length of 50-ohm coax.

In his design, the author used ordinary slide switches mounted in a row along a brass front panel with resistors arranged in "PI" configuration between them. Then he formed a strip-line from 0.25-inch (6-mm.) wide brass strips that bridge the gap from switch-to-switch along the entire length, spaced an accurate distance from another brass surface made of small pieces of brass rectangular tubing, to form a 50-ohm line. When all the switches are in the zero-ohms position the assembly does, in fact, closely approximate a 50-ohm line at frequencies up to near UHF.

The three attenuation resistors are connected between adjacent switches. Each is a 1-percent tolerance, 1/4-watt, metal-film type and the values are calculated to provide one section, each, with attenuations of 1-, 2-, 3- and 5-dB., plus six 10-dB. sections. By manipulating the switches in various combinations, it is possible to adjust the total attenuation over the full 1- to 71-dB. range in 1-dB. steps.

When the wiring of all components is completed, the brass strips forming the bottom, two sides, and two ends are soldered into place, forming a closed box.

Laboratory measurements of the completed unit show that with all switches set to 0-dB. the measured attenuation at 148-MHz. is 0.4-dB., at 225-Mhz. it is 0.4-dB., and at 450-MHz. it is 0.84-dB. With the switches all set for maximum, the attenuation at 148-MHz. is 72.33-dB., at 225-MHz. it is 73.17, and at 450-MHz. it is 75.83-dB.

Title>TA3:DTMF to RS-232-C Converter and HF-Link Controller
Author>Thompson, Nigel - KG7SG
Source>QST Jun 95, pp. 35-37
Abstract>Construction information for a converter/controller to use DTMF tones to control a packet HF-link.

Digest>KG7SG describes a system for controlling a packet HF-link that he has designed and built. It uses dual-tone, multi-frequency (DTMF) control signals, otherwise known as "Touch-Tone", which are familiar to everyone from telephone usage. He put the IC chips and other components developed for telephone applications to use in this controller.

A packet HF-link link requires a home station with a computer-controlled HF transceiver. Also required is a UHF uplink receiver and downlink transmitter to communicate with a remote UHF transceiver that is in the hands of the user and is transmitting DTMF tones.

Modern HF and UHF transceivers are available with computer control functions built in, so the only equipment the author found necessary to build was the DTMF to RS-232-C converter. In this article, he provides the circuit diagram and parts lists, plus construction information.

Most of the items on the parts list are available from Radio Shack; for the others, Mr. Thompson includes names and addresses of mail-order suppliers. PC-boards are available from FAR Circuits, 18N640 Field Court, Dundee, IL 60118-9269 for $7.50, including domestic shipping.

Title>TA4:Build the Stealth Antenna Tuning Indicator
Author>Craswell, James "Jay" - WB0VNE/AAV5TH
Source>QST Jun 95, pp. 38-39
Abstract>How to build an antenna tuner that allows only the minimum power to reach the antenna during tuning.

Digest>In order to reduce interference on the ham bands, all operators should use minimum transmitter power when tuning up their transmitters and antennas. To aid that process, Mr. Craswell has designed and built a sensitive antenna tuning indicator.

The unit is a simple device that switches the power output of the station transmitter to a dummy load and "leaks" just enough power into the antenna to activate a sensitive reflected-power bridge and indicator when the control switch is set to the "Tune" position. The bridge and reflected-power indicator are built in accordance with a conventional circuit that has been published in ham literature for nearly 50 years. All components are readily available.

The effectiveness of the unit was demonstrated in a test that the author performed. With his transmitter operating at 100-watts output, a neighboring ham found the signal barely detectable, although the reflected power indicator gave ample meter deflection to allow the antenna tuner to be tuned easily.

Title>TA5:Build a Super-Simple SWR Indicator
Author>Brock-Fisher, Tony - K1KP
Source>QST Jun 95, pp. 40-41
Abstract>How to build a simple and inexpensive forward/reflected power bridge for use at QRP power levels. It uses LEDs, rather than a meter, as indicators.

Digest>This article describes the construction of a simple and inexpensive SWR bridge, for use with QRP transmitters, that indicates forward and reflected power by varying the brightness of two LEDs. It does not directly indicate SWR, but it does perform its main function well, which is to allow the operator to adjust the tuner to cause minimum reflected power. The tuner is adjusted to the setting at which the reflected power LED goes out, or almost so. The bridge can be used to tune transmitters with output power as low as 0.2-watt.

The bridge circuit was first published in QST Aug 82, and appeared in the ARRL Handbook editions from 1985 through 1991. K1KP eliminated the need for a meter by substituting the LED indicator circuit. It uses dual op amps to drive the two LEDs.

The author also included a voltage regulator and an accompanying circuit that provides an artificial ground for the op-amps, thereby eliminating the need for both positive and negative power supplies. A single 9-volt battery provides adequate power for up to ten hours of use.

An etched and drilled PC-board for the unit is available from FAR Circuits, 18N640 Field Court, Dundee, IL 60118-9269, for the price of $5.50, including shipping.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:Kenwood TM-255A 2-Meter Multimode Transceiver
Author>Ford, Steve - WB8IMY
Source>QST Jun 95, pp. 66-69
Abstract>A favorable review of the TM-255A transceiver that features a removable front panel and good performance on 9600-baud packet. It includes all other features common to top-of-the-line VHF rigs.

Digest>The Kenwood TM-255A is designed as a mobile rig. It has a detachable front panel and comes with a multipurpose microphone having an integral keypad and several control buttons. In a vehicle, the control panel can conveniently be mounted in or near the dashboard and the body of the transceiver in a trunk.

The front panel contains an easy-to-read amber LCD display and practically all controls. The rig contains dual VFOs; i.f. shift; speech-processor; noise-blanker; power-level switching between 5- and 40-watts output; and incremental tuning for the receiver (RIT), but not the transmitter (XIT). Repeater offset shift and T/R frequency reverse

are controlled from the panel. The receiver also has an "AIP function" that gives it an expanded dynamic range at the cost of a slight decrease in sensitivity.

Memories can store up to 50 simplex frequencies and 49 repeater pairs. The scanning function can be used to sweep the memory channels or the whole band.

The TM-255A provides CTCSS tone encoding in transmission; an additional option of a CTCSS receiving decoder is available. It also generates and decodes DTMF tones.

The ARRL Laboratory tested the reviewed unit for performance on 9600 bit/s packet operation and found it to be excellent. The reviewer found the rig to be very effective in phone operations, both FM and SSB. He also found satellite operations efficient and enjoyable. In view of future developments in satellites, Kenwood made provision for operating the TM-255A with transverters on 1240- or 2400-MHz. On either band, the rig can be set up to display the frequency of the microwave signal instead of the 2-meter signal to which it is transverted.

The reviewer concluded: "The TM-255A is an excellent all-mode radio. It gives you almost everything you could possibly want for 2-meter operating...." The manufacturer's list price is $1110.

Title>PR2:Force 12 C-3 "Classic" Triband Yagi Antenna
Author>Tracy, Mike - KC1SX
Source>QST Jun 95, pp. 69-70
Abstract>Describes a tribander made of three 2-element Yagis on one boom, with separate driven elements for each band. It provides unusually wide operating bandwidth.

Digest>The designation "Classic" applied to this antenna refers only to the fact that it covers 10-, 15-, and 20-meters, not that its design is conventional. It is very different from other, familiar tribanders.

For one thing, it is made up of three 2-element Yagis on a common boom. Second, it uses three separate driven elements for the three bands, but the feed line is connected only to the 20-meter element. The others are excited parasitically from the 20-meter element. The 10- and 15-meter driven elements are coupled to the 20-meter one in a manner similar to "Open Sleeve" antennas, as described in the latest ARRL Antenna Book, and elsewhere.

The third unusual feature is that it contains no traps, at all. The reflectors and directors are all full-size, hence the operating bandwidth is unusually wide.

The 15- and 20-meter beams use a driven element and reflector for each. The 10-meter antenna is made up of two driven elements (for broadbanding), plus a director. The antenna contains seven elements, in all. When used without a tuner, the antenna showed SWR of less than

2:1 across the whole of both the 10- and 20-meter bands. On 15-meters, however, the SWR reached 2.5:1 at band edges; the bandwidth over which the SWR did not exceed 2:1 was about 300-KHz.

In spite of the number of elements and the 18-foot (5.5-m) long boom, the entire antenna only weighs 32-pounds. The light weight results from the fact that the elements are of smaller diameter than other beams. For example, the 20-meter elements start at 1-inch (25-mm) OD and taper to 3/8-inch (9.5-mm). Another result of the smaller tubing is the fact that the wind load is rated at only 5.6 square feet (0.52 sq. m.) The modest weight and wind loading make it possible to mount the antenna on small towers using light-duty rotators. The antenna that was tested survived the worst months of New England winter, as well as a spring thunderstorm that blew with gusts of over 70-mph, without mishap.

The antenna covers the entire 10- and 20-meter bands with SWR of less than 2:1. On the 15-meter band, however, the bandwidth over which the SWR stayed within 2:1 was limited to about 300-KHz. At the band edges, it reached 2.5:1.

The reviewer found the performance of the C-3, mounted on a 30-foot (9-m) tower above the ARRL Headquarters building, to be very good. His summary states: "I recommend the C-3 without hesitation to someone looking for a durable tribander with good performance."

The manufacturer is: BuyUSA, Inc., 3015-B Copper Road, Santa Clara, CA 95051. The list price is $450; a current balun adds $30.

TECHNICAL CORRESPONDENCE
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:Motorola Experimenter's Kits Available
Author>Pagel, Paul - N1FB
Source>QST Jun 95, p. 73
Abstract>Serious amateur experimenters can obtain free sample kits from Motorola.

Digest>This letter calls to the attention of all serious amateurs that Motorola offers free sample kits to bona fide experimenters. Each contains a PC-board, the ICs needed for the project, data sheets and application notes, but no small parts such as resistors, diodes, and the like.

To learn how to obtain one of the kits, contact Motorola at (800)441-2447, or Motorola distributors.

Title>TC2:Modern Receiver Design
Author>Rech, Henry
Source>QST Jun 95, pp. 73-74

Abstract>Modern receivers suffer from lack of narrow-band front-end filters.

Digest>Mr. Rech points out that modern receiver design has abandoned the multiple front-end tuned circuits that used to characterize high-performance receiver design in the vacuum tube days. The broadband front-end filters of modern receivers are only a partial substitute. They allow out-of-band signals to cause several kinds of deleterious effects, including second-order IMD and also increased noise on weak signal reception.

He challenges receiver manufacturers to develop narrow-band filter tracking schemes, either mechanical or electrical. Doing so would go a long way toward ameliorating the ills of modern receivers.

Title>The Ubiquitous, Notorious NiCd
Author>Kayser, Larry - VA3LK/WA3ZIA
Source>QST Jun 95, p. 74
Abstract>All cells of a battery pack must have similar charging characteristics, or else operating life will suffer.

Digest>The author, who has had many years of experience in working with NiCd battery packs made up of a number of cells, describes some lessons he has learned about their operating life. For critical operations in which reliability is extremely important, it is necessary that all cells in the pack have nearly identical charging and discharging characteristics. If one cell's charging and discharging curves differ from the others, the entire pack is likely to fail.

Tests of standard carbon-zinc single-use batteries shows that, in a single production run, the individual characteristics are amazingly homogeneous. Mr. Kayser challenges NiCd manufacturers to research methods of achieving similar standardization in making NiCds.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Try a 2-Meter Flexi-J Antenna
Author>Mandeville, Bob - N1EDM
Source>QST Jun 95, p. 71
Abstract>Describes construction of a 2-meter antenna that can be rolled up and carried easily.

Digest>N1EDM describes the portable antenna that he uses to enhance the operation of his H-T when backpacking, or during business trips. A diagram is included. The main objective of his design is to make an antenna that is light weight and easy to roll up and carry. Electrically, it is a regular "J" antenna.

For flexibility, he uses rubber-insulated wire that he obtains by splitting a piece of ordinary zip-cord. The antenna is made to look like a length of ladder line; the "rungs" are spacers of insulating material, except for the bottom one, which is a piece of copper-clad PC-board material used as a shorting bar.

One side of the ladder is entirely wire; the other side is part nylon line and part wire, so that the combination makes the "hook" of the "J". A 15-foot (4.6-m) length of RG-58 coax is connected 2.5-inches (63.5-mm) above the shorting bottom rung with the braid soldered to the long side and the center conductor to the short side of the "J".

A stirrup of nylon line is tied at the top with an additional length of rope for heaving over a branch, or other support. For carrying and storage, Mr. Mandeville wraps the assembly around a one-pound coffee can and uses the inside of the can for storing other small items.

Title>HK2:Curing MF/HF Ceiling-Fan Noise
Author>Michaels, Charles J. - W7XC
Source>QST Jun 95, pp. 71-72
Abstract>Eliminating noise from a Casablanca ceiling fan controller.

Digest>W7XC suffered from very strong line noise that appeared on 160-meters, as well as throughout the broadcast band. He found that it was caused by the control system of a Casablanca ceiling fan. This system uses 60-Hz. bursts of RF at frequencies from 450-KHz. to 1.0-MHz. as control signals and the RF generator operates continuously when the fan is running.

The author was able to eliminate the interference by inserting a home-made RF choke inside the fan's motor housing, wired in series with the assembly. The choke was made with 14 turns of insulated wire on a Radio Shack snap-together core (Catalog No. 273-104).

Title>HK3:A Non-Computerized "Almost Instant Look-Up" Log
Author>Woosley, Joe C. - NR5H
Source>QST Jun 95, p. 72
Abstract>Describes a hand-written log arranged for easy referral.

Digest>NR5H keeps his log on paper, arranged for easy referral. All station call signs are sorted according to the first letter that follows the number.

He maintains the log in a spiral-bound notebook with ten pages set aside for each letter of the alphabet. The pages in each set of ten are numbered in sequence from 1 through 0, to represent the call districts. A tab is attached to the sixth page in each set. Thus, when he wants to check if a particular call has been worked before, he can turn instantly, under the appropriate letter, to page 6 which shows him his contacts with stations in the fifth and sixth districts. For other call districts he never needs to leaf over more than two pages, forward or back, to find the one he is checking.

Title>HK4:Measuring Feed-Line/Balun Loss from the Station End of the Line
Author>Kuecken, Jack - KE2QJ
Source>QST Jun 95, p. 72
Abstract>How to measure loss in a length of feeder if the end is either open or shorted.

Digest>One can often measure the approximate loss of power in a feedline from the feed end by taking advantage of certain inherent characteristics of transmission lines. If the far end of any line is either open or shorted, its input SWR is a measure of the loss. To compute it, one first finds the voltage-reflection coefficient (Gamma), using the equation: Gamma = (SWR - 1) / (SWR + 1). If SWR cannot be measured directly, but forward and reflected power can, Gamma can be calculated by: Gamma = (reflected power) / (forward power). Knowing the Gamma, one can calculate the two-way loss in dB. by: Loss = 20 * Log(1/Gamma).

The loss in the line can often be measured even while it is connected to an antenna. If the antenna is a center-fed half-wave dipole resonant at 40-meters, for example, it will be a full-wavelength long at 20-meters and will show very high input impedance. For calculation purposes, it can be considered infinite and the above formulas will produce measurements within reasonable accuracy.

Title>HK5:Modify Your Wire Cutters for Safety
Author>Innes-Brown, Hugh - N2MD
Source>QST Jun 95, p. 72
Abstract>Modify wire cutters to obviate eye danger from flying clippings.

Digest>Mr. Innes-Brown is addressing the fact that clipping wires with a diagonal cutter often causes the short end to fly off with substantial velocity, posing a danger of eye injury. He suggests that the cavity formed behind the cutter blades when they are closed be filled with silicone sealant to form a soft grip that will hold the ends from flying off. To do this, one must clean the cutter blades with acetone (nail-polish remover), or other solvent. Wrap tape or a rubber band around the handles to hold them closed and fill the cavity behind them with sealant and let it cure for 24-hours.

After curing, open the blades a crack and slice the silicone with a razor blade.

FEEDBACK (FB)

Title>FB1:"The WB2"REMote" Link, QST Jan 95
Author>Pagel, Paul - N1FB

Source>QST Jun 95, p. 74
Abstract>Contrary to information in the article, etched and drilled PC-boards are not available.

Title>FB2:"Quick and Easy CW With Your PC", QST Jan 95
Author>Gruber, Mike - WA1SVF
Source>QST Jun 95, p. 74
Abstract>In the schematic, Figure 1 of page 61, C7 should be 0.1 Mfd., not 0.01 Mfd. The value is shown correctly on the parts list, but not on the diagram.

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular section of QST. It features articles of primary interest to newcomers to the hobby.

Title>NHC1:Pocket Logbook
Author>Radmore, Bob - N2PWP
Source>QST Jun 95, p. 52
Abstract>Using "pocket organizers" as computerized radio logs.

Digest>A number of manufacturers, including Sharp, sell "pocket organizers". These are self-contained memory systems, with keyboard and LCD displays, for recording names, addresses, and telephone numbers in an easily-accessible form. N2PWP uses one as a portable logbook. His unit has 64-kilobytes of memory, which will hold about 1700 log entries.

When one is entering data, the organizer prompts for the name, phone number, and address, in that order. In recording a QSO the author enters the name then, at the telephone prompt, enters the callsign. In the address field, he enters city and state. There is also a field provided for remarks, which the author uses for miscellaneous information.

His Sharp unit will search all fields of all records to find any previous entry. His log now contains some 650 records and the device will scan all of them in about ten seconds.

For backup purposes, as well for consolidating records in the portable organizer with other records on a home computer, it is important that there be hardware and software available to dump the full contents of the portable unit into another computer.

Title>NHC2:The Doctor is IN
Author>Various
Source>QST Jun 95, pp. 53-54
Abstract>Questions and answers of interest primarily to newcomers.

Digest>Questions answered in this issue include why the lower sideband is used at frequencies below 9-MHz. and the upper on higher frequencies; the true meaning of "line of sight"; use of a single transceiver for both amateur and commercial applications; causes of r.f. feedback into a transceiver; long-term storage of NiCd battery packs; converting degrees, minutes and seconds of latitude/longitude to decimal; the prevalence of 600-KHz. frequency splits among 2-meter repeaters; and others.

Title>NHC3:Test Your Knowledge!
Author>Silver, H. Ward - N0AX
Source>QST Jun 95, p. 55
Abstract>Digest>This article is a questionnaire, with answers provided upside down at the bottom of the page, by which the reader can grade his own knowledge of amateur radio. It is not amenable to digesting.

Title>NHC4:KISSes, POPs and Pings
Author>Ford, Steve - WB8IMY
Source>QST Jun 95, pp. 56-58
Abstract>How packet operators can join Amprnet by shifting to TCP/IP mode, which is compatible with Internet.

Digest>Practically any ham who is now operating packet mode can also switch over to TCP/IP mode with little effort and no cost. TCP/IP is the operating protocol that is universally used on Internet and, when a group of amateur stations adopt it for their intercommunication, they become what is known as an "Amprnet" (AMateur Packet Radio NETwork). At that point, they can operate among themselves in precisely the same way that Internet works worldwide. In fact, they can link up with Internet through what is known as a "gateway" and transfer information through the facilities of both. TCP/IP mail, on both Amprnet and Internet, is sent directly from sender to receiver; no Bulletin Board is involved. If a gateway is available, mail will move automatically between the two systems.

Each operator in Amprnet has a unique address that is assigned by one of the volunteer coordinators, whose names and calls are listed in the article. To send E-Mail to an addressee on Internet, one has to know the person's net address. But if the E-Mail is addressed to an amateur on any Amprnet, the only address required is the callsign, since the net address of every member of Amprnet is in a file that is automatically accessed when mail is addressed to them.

When one sends an E-Mail message, the sending computer checks to discover whether the recipient is on the air. If so, the message is sent immediately; if not, the computer holds it, and keeps trying, until it succeeds.

File transfers are also easy. All kinds of files, including text, data, pictures and other images, voice, music, and anything else that can be encoded and filed in the computer can be transferred through File

Transfer Protocol (FTP).

Anyone who wants to get started in TCP/IP operation needs first to build a packet station. Next they need to get a version of the Net Operating Software (NOS), various versions of which are available for downloading, free, from many sources including the ARRL BBS at (203) 666-0578. Finally, they must install the NOS and get on the air. The best way to do that is with the help of an experienced TCP/IP operator. Most of them are evangelical in encouraging others to join the activity, and new hams will probably have no difficulty in finding ones to help them.

Title>NHC5:Five Bands, No Tuner
Author>Wright, Bill - G0FAH
Source>QST Jun 95, p. 59
Abstract>Describes a wire dipole operable on 40-, 20-, 17-, 12-, and 10-meters without an antenna tuner.

Digest>This article describes a wire dipole that will transmit on the c.w. segments of the 40-, 20-, 17-, 12-, and 10-meter bands with SWR less than 2.5:1, without an antenna tuner. With a tuner, it can be tuned to any part of any amateur band.

The antenna is 94-feet (28.7-m) long, fed in the center with a 41-foot (12.5-m) long length of 450-ohm ladder line. At the feed end of the line, a 1:1 balun links it to 50-ohm cable of any length.

Title>NHC6:Travel Tips for Summertime VHF/UHF Fun
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Jun 95, pp. 60-62
Abstract>Describes operating 2-meter FM during a road trip.

Digest>This article describes some of the fun that can be had by operating 2-meter FM while making a road trip through parts of North America. To take advantage of that band, one needs to use repeaters that are liberally scattered throughout the country. To find them, one should have a copy of the ARRL repeater directory that lists the split frequencies used by each.

The author includes many tips concerning the best way to strike up conversations and friendships with hams along the way, and the etiquette that will make one popular.

Title>NHC7:Exploring the 9600-Baud PACSATs
Author>Cornwall, Andrew - VE1COR
Source>QST Jun 95, pp. 63-65
Abstract>Using PACSATs for operating packet at 9600-baud.

Digest>There are now eight amateur PACSATs in polar orbit (passing over both poles), three of which operate at 9600-baud. All three operate in Mode J; that is they receive packets on the 2-meter band, store them,

and transmit them back to earth, on demand, on 70-cms. They are Oscars 22, 23, and 25.

It is very much more convenient to operate through the 9600 bit/s "birds" than with the five older, 1200-bit/s birds still in orbit because the low-earth orbits they all follow pass over any one spot in only 15- to 20-minutes. The time is too short to transmit or receive much of a file during one pass at the slow speed. At 9600-bit/s, eight times as much information can be transmitted during the same period. Even at the higher speed, it is often the case that a file being transmitted is too long to be completed during the one pass. The software that is universally used by amateurs "remembers" where the file was cut off during transmission and, on the next pass overhead, it will continue where it left off.

The polar orbits bring every satellite over every spot on earth at least twice every day, once travelling from north to south, and twelve hours later, from south to north. Because of the relatively low orbits that the PACSATs follow, the signals do not have to traverse vast distances, so low power stations are quite adequate for the job. The author of this article uses 25-watts output for the 2-meter uplink with a single log-periodic antenna for both uplink and downlink. Since its main lobe is broad, he points it at a fixed angle above the horizon and rotates it only in azimuth. This gives him continuous communications for the duration of most overhead passes. Only occasionally does he lose a minute or two as the "bird" passes directly overhead.

The article warns that satellite operation is, in many ways, working at the cutting edge of amateur technology. It is often inconvenient and frustrating. Communication is possible only during certain brief periods each day. The computer and digital accessories necessary in the ground station present additional challenges. In spite of these factors, many hams are enthusiastic devotees. One said: "This is no hobby. It is an obsession!"

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Amateur Radio on the World Wide Web - Part 1
Author>Bible, Steven - N7HPR and Pool, Greg - WH6DT
Source>QST Jun 95, pp. 24-26
Abstract>Part 1 a 2-part article describing the World Wide Web available on Internet.

Digest>The World Wide Web is a name given to a function that is available on Internet. It refers to an enormous body of information of all kinds that is accessible through individual computers linked through Internet. The unique feature of the World Wide Web system of accessing information is that it uses HyperText.

Documents written in HyperText embody within the text a convenient means of instantly accessing other, related information from sources all over the world. Photographs of computer monitor screens with HyperText on them are contained in the article. What they show are writings that are in plain text, or in lists of names and titles, or other forms. Common to all is that certain words are underlined. When one reaches such a word, if it suggests some other information that the reader would like to consult, all they need do is to click on that word and, instantly, a new screen pops up with the new information presented.

The World Wide Web is relatively new and expanding rapidly. Already, people are making ham radio information available via the Web. One set of HyperText pages has been created and is maintained by Lew Williams, KE4ARM, at North Carolina State University. Through his pages, one can search a call sign database, predict a satellite pass, take a sample amateur license exam, read Part 97 of the FCC rules, and do many, many other things. As Internet, computer technology, and worldwide communciations develop at amazing rates, the ease of accessing is growing at a similar rate. Using the World Wide Web is comparable to having the services of experienced librarians with instant access to full library facilities throughout the world available on call at any time of day or night.

Title>GI2:Patches from Palmer Station
Author>Smith, Patty WB6DRG
Source>QST Jun 95, pp. 42-43
Abstract>A dedicated ham runs phone patches for personnel isolated at Palmer Station in Antarctica.

Digest>Palmer Station is a US base in Antarctica. WB6DRG, in Torrance, California, spends much of her time running phone patches for the scientists and other personnel at Palmer. She has been providing contacts for people there for some ten years, and has come to know the people, almost as one of their family. In this article, she describes the amateur equipment at both ends of the link, and something of everyday life at the isolated base.

Title>GI3:A Trip Through the Teaching Universe
Author>Dunn, Connie - KB5LES
Source>QST Jun 95, pp. 44-46
Abstract>How a teacher in a Missouri town received grants and developed a teaching program called: "Building the First City on Mars".

Digest>This article describes the activities of Sheila Perry - N0UOP, a teacher in a small Missouri town, who has received grants to produce a teaching program called: "Building the First City on Mars". The project will combine science, space, math, electronics, English language and reading, and geography. Students at the school will communicate with other students around the country via Internet and packet radio. It is designed for kindergarten through twelfth grade students. The new project is expected to foster problem solving and encourage independent

thinking, not to mention raising test scores.

A major part of the article is devoted to the manner of writing applications for grants, and how Ms. Perry was successful in obtaining four grants totalling $155,000 for this project.

Title>GI4:The Lady Operators of Alaska
Author>Pataki, George - WB2AQC
Source>QST Jun 95, p. 47
Abstract>Interviews with lady ham operators in Alaska.

Digest>During 1994, the author made a 29-day trip through Alaska, visiting hams. He noticed that a large percentage of the Alaskan operators were women. In this article, he lists a number of the women hams that he met, most of whom are married to hams. In each case, he mentions a bit about them and photographs of six are included with the article.

Title>GI5:Echoes of the Past
Author>Tencza, Albert - NX2Q
Source>QST Jun 95, pp. 48-49
Abstract>Reminiscences by W2AF, who operated from a hilltop in New Jersey during the first "U.H.F. Relay" in 1939.

Digest>At the time of the September, 1994 VHF QSO Party, the author set up his station in a camper parked at a hilltop state park in New Jersey. While there, he was introduced to Goyn Reinhardt, W2AF, who had operated a station at the same location during the first "U.H.F. Relay", in 1939, 55-years earlier. The article encompasses some of the stories related by Mr. Reinhardt about operations on the pre-WW2 "5-Meter Band", which was "U.H.F." at that time.

2116. Digest of Articles - QST July 95 (Long - 42k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-02 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <3vnk6r$rtp@horus.infinet.com>
Source record: 241207
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the July, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1: A Wideband 80-Meter Dipole
Author>Severns, Rudy - N6LF
Source>QST Jul 95, pp. 27-29
Abstract>Describes a 3-wire antenna that covers the entire 80-meter band with SWR less than 1.5:1. It combines an open-sleeve antenna with a folded dipole.

Digest>The 80-meter band is, by far, the widest of the HF ham bands, in terms of percentage. N6LF has discovered what is probably the simplest way yet devised to make an antenna usable across the full band without a tuner. He has combined a folded dipole with an open-sleeve antenna and produced a single antenna that covers the entire 3.5- to 4.0-MHz. band with a maximum SWR of about 1.5:1.

Folded dipoles are made of two half-wavelength wires, connected at both ends and physically spaced apart over their full lengths. They are fed at the center of one of the two wires. Their primary advantage is to show high feedpoint impedances that are good matches to open-wire transmission lines. Open-sleeve antennas are made of isolated pieces of wire or tubing mounted in close proximity to conventional dipoles.

The author's antenna is 132-feet, 2-inches (12.28-m.) long. It is made of three parallel wires fastened to horizontal spreaders 12-inches (305-mm.) long. The folded dipole wires are attached to both two ends of each spreader, and the isolated parasitic wire runs along the centers of the spreaders. The last spreader at each end is attached 2-feet (0.6-m.) from the ends of the dipole. The 2-foot (0.6-m.) lengths at the ends form a stirrup attached to a 150-pound-test fishing swivel, to support the antenna.

The center wire, which electrically floats, is 118-feet (35.97-m.) long. One side of the folded dipole is cut at the center and connected to a random length of ladder-line. The feed-end of the line is terminated by a 9:1 balun that connects via a length of 50-ohm coax to the radio.

When the assembly is supported at both ends, the weight of the feedline tends tend to pull one side downward so that the spreaders are held vertically. In a wind, there is a tendency for the antenna to twist, causing the three wires to short to each other. To help prevent this, the author attached a 1-ounce fishing sinker near each end of the lowest wire, near the end spreaders.

Mr. Severns reports several experiments in changing the length of the parasitic wire. He found that by shortening it to 114-feet (34.75-m.), he could extend the high-frequency limit to 4.2- MHz., which would be attractive for MARS operations. At that length, the highest SWR within the amateur band limits rises to 1.8:1. When he shortened it by two more feet, to 112-feet (34.14-m.), the bandwidth between SWR readings of 2:1 became 800-KHz. wide (3.30- to 4.25-MHz.). Although this is of only academic interest to amateurs, it shows the efficacy of the general

approach.

Title>TA2:A Continuously-Variable Bandwidth Audio Filter
Author>Bramwell, Denton - K7OWJ
Source>QST Jul 95, pp. 30-32
Abstract>Build a switched-capacitor audio filter with variable upper rolloff frequency, for reception of either CW or voice signals.

Digest>This article provides full design and construction details for a variable bandwidth audio filter of the switched-capacitor type. Integrated circuit chips manufactured by Maxim contain practically all of the circuitry required for switched-capacitor filters. The author's design uses two such chips, cascaded, to produce a high-frequency rolloff at 96-dB. per octave!

The configuration used produces a fixed frequency cutoff on the low side (about 300-Hz.) and a continuously variable high frequency cutoff from 450-Hz. (for CW) to 2700-Hz. (for voice). The bandwidth of the switched capacitor filters is controlled by the clock rate. To make it continuously adjustable, a separate clock oscillator is provided, using a 555 timer chip with a 2000-ohm pot to adjust the frequency. The fixed frequency rolloff on the low side of the passband is caused by two stages of high-pass active RC filtering using 741 op amps.

Maxim ICs are manufactured by Maxim Integrated Products, Inc. of Sunnyvale, CA. They are available from distributors, including Digi Key Corp., Thief River Falls, MN. Etched and drilled PC-boards are available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269 for $7.50, including shipping.

Title>TA3:Voice-Track: A Multifunctional, Talking Repeater Controller - Part 2
Author>Bonello, Alexander - LW2EET
Source>QST Jul 95, pp. 33-36
Abstract>Part 2 of article giving construction details for a remote repeater controller. This part describes the software.

Digest>The Voice-Track repeater controller is completely controllable remotely through the use of DTMF signals. This installment details the commands that are used to program each function. It also includes instructions for installing Voice-Tracks in Yaesu repeaters, plus similar instructions for installing them in non-Yaesu equipment.

The summary states that the Voice-Track unit is much like the control computers found aboard AMSAT satellites. It allows efficient, remote control of every parameter of the repeater. Another feature is spoken telemetry that does not require any kind of decoding. Since the whole operating system is based on software, it will be relatively easy to make future modifications and additions.

Title>TA4:Amateur Radio on the World Wide Web - Part 2
Author>Bible, Steve - N7HPR and Pool, Greg - WH6DT
Source>QST Jul 95, pp. 37-40
Abstract>Part 2 of description of the World Wide Web on Internet. This part describes setting up a similar facility using only amateur radio.

Digest>In the first part of this article, the authors discussed how to use the World Wide Web on Internet to obtain information of all kinds. They also explained how individuals have set up Web "pages" of their own, which contain information that others may want to access. In this installment, they explain that almost everything that can be done on Internet can also be done via amateur radio packet. They give an outline of how any ham could build their own "page" on a packet radio "Web", exactly analogous to the Internet World Wide Web.

They imply that many hams would be qualified to undertake this task. It would seem to be closer to the truth to state that, for a person to accomplish such a project, they should be (1) thoroughly familiar with Unix-based computer systems, probably from working with them daily; (2) currently operating amateur packet radio and TCP/IP operations; (3) thoroughly familiar and experienced in the use of Internet in all of its present forms, including World Wide Web; (4) generally familiar with the C and C++ programming languages and capable of writing and compiling routines in those languages. For people who are lacking in any of those four experience catagories, and for anyone who has only a limited time to spend on their hobbies, such an undertaking seems doomed to failure.

For people who are so qualified, this article contains a great deal of guidance. The authors introduce: Linux - "a true 32-bit operating system", which is the operating system that is recommended for a packet radio Web and is available from several on-line sources free of charge. It is a bona fide version of Unix. First, Linux must be configured for packet radio. Next, the operator must obtain, install, and configure the World Wide Web server program: "HTTPD". Third, they must obtain, install, and configure the WWW User (client) program: "NCSA Mosaic". Fourth, they must obtain, install and configure Microsoft Windows 3.1 Web Client. Each of these steps is a straightforward project for one who is thoroughly experienced, but not a trivial effort even for them.

Using the information in this article, interested parties will be able to obtain at low cost a considerable mass of documentation bearing on these subjects. Most of it is obtainable by downloading from Internet resources; others are printed manuals and textbooks available in libraries and book stores.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:QST Compares: Dual-Band Hand-Held FM Transceivers
Author>Ford, Steve - WB8IMY

Source>QST Jul 95, pp. 66-71
Abstract>Review of five H-Ts: Alinco DJ-582T, ICOM IC-Z1A, Kenwood TH-79A(D), Yaesu FT-51R, and the Standard C-568A.

Digest>This article is a review of five H-Ts, four of which are truly dual-band and one is a (kind of) tri-band unit. The dual-band units cover the 2-meter and 70-centimeter bands; the tri-band one covers those plus the 1.2-GHz. band. The dual-band units are the Alinco DJ-582T, ICOM IC-Z1A, Kenwood TH-79A(D), and Yaesu FT-51R. The tri-band unit is the Standard C-568A.

All five units offer most of the same basic features, including memory channels, scanning, automatic battery-save, automatic power-off, DTMF paging, CTCSS (subaudible) encoder, CTCSS decoder, crossband full duplex, and crossband repeat. In addition, all but the Alinco DJ-582T offer auto repeater offset and all but the ICOM IC-Z1A offer AM reception in the aircraft band.

Alinco DJ-582T

The Alinco DJ-582T is notable for being exceptionally easy to use. Most of the functions are obvious from the legends on the control panel, without necessitating reference to the manual. Nevertheless, the manual is well designed and easy to read.

One unusual feature is that operating at reduced power is accomplished by switch action from the front panel; the other units require control from the PROGRAM mode. Another nice feature is that, if users listen with stereo headphones, they get UHF in one ear and VHF in the other.

The battery charger is actually a stand that holds the transceiver; it is easy to slip the rig into the holder when finished using it, automatically recharging it. Among the competitive units tested, only the Yaesu FT-51R offers a similar charger. All the others use plug-in types.

The one important feature that is omitted is the automatic repeater offset function. In the DJ-582T, it is necessary to program the frequencies in memory.

The typical street selling price for the DJ-582T is $405.

ICOM IC-Z1A

The IC-Z1A offers one unique feature: a detachable front panel. When it is removed, it becomes a remote speaker-mike that carries its own keyboard and LCD display. This is not an unmixed blessing; the tiny speaker, without a baffle, produces feeble and tinny sounds. If used in a vehicle, it would probably be inadequate and a separate speaker should be considered. It is noted that a "sister" unit of the IC-Z1A is the IC-W31A, which is practically identical except without the detachable panel. It typically sells for $80 less.

The reviewers praised the ease of programming; they found it possible to program a repeater memory channel in 30-seconds, or less.

The rig has one annoying feature. Before operators can change the volume control setting, they must press a button and hold it down while adjusting the knob. The inconvenience is partially ameliorated by the fact that it is possible to program a 5-second "hold" in the action of the pushbutton, so that one can touch the button for only an instant, and then have ample time to adjust the control.

The typical selling price for the IC-Z1A is $500.

Kenwood TH-79A(D)

The TH-79A(D)'s operation is largely intuitive and the rig is easy to use. In addition, it uses a unique dot-matrix LCD, so it can display text instructions. This can be used with a special GUIDE function to remind one how to use some of the rig's features, without the need to consult the manual.

The rig has a timer that performs several useful functions. It shuts off heavy power-using functions if the radio is not used for a period of 10-seconds. It can be programmed to shut off transmitting after a continuous transmission of just under 3-minutes, in case one is using a repeater with a 3-minute cutoff. Also, the unit shuts down completely, including the receiver, if it has not been used for one hour.

The rig's reception on the AM aircraft band is very good. Unlike most of the other units tested, it pulls in weak signals well.

The typical street selling price for the TH-79A(D) is $490.

Standard C-568A

The C-568A can be considered a dual-band rig with an extra feature: 1.2-GHz. coverage; but that coverage is not optimum. First, the transmitter output is limited to only 35-miliwatts on 1.2-GHz. Second, the receiver is barely adequate; it responds better to an image frequency than to the desired one. Operation on that band should be considered only a tantalizing introduction to what is available there.

The rig is most noted for its ruggedness. All controls are clearly labeled and spaced adequately for the largest and clumsiest fingers. The LCD display is exceptionally clear, with excellent backlighting. In the dark it is bright, not the dim green often seen in other units.

On the 2-meter and 70-cm. bands, the rig transmits 3-watts output, which is adequate for most uses. The reviewers also noted that the received audio output is the best of those tested, with adequate volume and low distortion for use in noisy environments.

The typical selling price for the C-568A is $585.

Yaesu FT-51R

The FT-51R LCD display features a split-screen display with usual alphanumeric data in the upper window and additional text or graphs in the lower. It offers a "Spectrascope" function that paints a graph in the lower window to monitor activity on the band. Other uses for the lower window include a HELP function that scrolls instructions across the screen in case the operator attempts to initiate a function incorrectly.

Additional features cited by the reviewers include the battery voltage indicator, the sensitive AM aircraft receiver, a number of different scanning modes, and a function that switches on the LCD backlight whenever the scan stops on an active frequency.

The typical street price for the FT-51R is $485.

Title>PR2:Yaesu FT-11/41/51R ADMS-1 Programming Kit
Author>Ford, Steve - WB8IMY
Source>QST Jul 95, pp. 71-72
Abstract>Describes a software package used to facilitate programming Yaesu HTs models FT-11, FT-41 and FT-51R.

Digest>The long title of this product is meant to indicate that it is software for a computer using Microsoft Windows, to program any of the hand-held transceivers models FT-11, -41, or -51R. Although it is claimed to be relatively easy to program any of these HTs by hand, apparently it is attractive to use a personal computer to do the job.

The ADMS-1 Programming Kit is made up of a single floppy disk and a programming cable with a 1/4-inch, 3-conductor plug and a DB-25 female connector. The connector meshes with the RS-232 male connector on almost all personal computers that run Windows.

The diskette contains three programs, one for each of the three models of transceivers. The easiest way to adjust an H-T is to use the "Clone" mode that was originally designed to allow the memory banks in one H-T to be copied to another. The settings of the H-T are loaded into the memory of the PC, which displays their values on the screen. Using the mouse and the computer in a point-and-click manner, one can change any or all settings in a very straightforward manner. When all are corrected, the Clone mode is used in the reverse direction and the new values are loaded from the computer into the transceiver.

The manufacturer's list price for the kit is $39.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:A Neat Little Amplifier
Author>Cebik, L. B. - W4RNL
Source>QST Jul 95, p. 75

Abstract>Comments about "An AGC Audio Preamp for All Seasons", QST Feb 95. The letter shows how to vary the speed of the AGC function for various applications.

Digest>Mr. Cebik's letter comments about the article by NZ9E: "An AGC Audio Preamp for All Seasons", QST Feb 95. He points out that amplifiers similar to the one shown were described in amateur radio magazine articles in the early 1980's.

He further notes that, in the schematic of Figure 1 in the Feb 95 article, C3 and R5 control the speed of AGC action. Values of 1-mfd. and 560,000-ohms are suitable for audio work. Reducing them to 39,000-ohms and 0.47-mfd. allows the action to follow moderate-speed CW. Different values can be used to tailor the response for other specific applications.

Title>TC2:DTMF and CTCSS - How Well Do They Really Work?
Author>Bell, Gary - KA1OMA
Source>QST Jul 95, p. 75
Abstract>Repeaters often defeat the use of DTMF and CTCSS tones.

Digest>KA1OMA's letter contains comments about WB8IMY's: "Radio Tips: Selective Calling" in QST Nov 94, p. 73. He complains that DTMF selective-calling systems are disabled by some repeaters that deliberately do not transmit them so as to prevent unauthorized users from learning the access code. CTCSS tones, although useful, are often so distorted by the repeater that the intended recipient's receiver does not recognize them. The letter ends with a plea for others to suggest ways to overcome these limitations.

Title>TC3:RFI - To a Furnace
Author>Plascencia, Richard E. - W0RPV
Source>QST Jul 95, pp. 75-76
Abstract>How to prevent RFI from affecting a Lennox Pulse furnace.

Digest>This writer reports that his Lennox Pulse gas furnace failed to operate after each time he transmitted on HF using his kilowatt amplifier on bands from 80-meters through 15-meters. By talking with the manufacturer's customer service department, he learned that the gas valve and igniter are operated by a microcomputer. RF feedback from his transmitter caused the computer to be reset, requiring him to flip the a.c. power off and on before the furnace would start up again.

He found that he could solve the problem by wrapping the wire from the thermostat to the furnace several times through a ferrite core made from a few large beads taped together. Using a Radio Shack No. 273-104 snap-together core would probably do equally well.

Title>TC4:Capacitor Confusion
Author>Craswell, Jay - WB0VNE

Source>QST Jul 95, p. 76
Abstract>Markings on disk capacitors are more confusing than ever. Describes several systems of labeling.

Digest>In recent years, the marking system that identifies the values of disk capacitors has become less standardized and understandable. Originally, a capacitor marked .0068 indicated 0.0068-mfd. Then it was simplified to: "6.8 nF.", for nanofarads. Now, some capacitors are marked: "682"; the number is meant to indicate the value in pico-farads, with the last digit indicating the number of zeroes following the first two significant figures. Thus 682 means 6800-pF., or 6.8-nF.

Recently, some disk capacitors have appeared stamped with only two digits. It turns out that these numbers refer to the value in picofarads. Consequently, that system can only be used for values between 1- and 99-pF.

LAB NOTES (LN)

Title>LN1:FM Antennas
Author>Tracy, Mike - KC1SX
Source>QST Jul 95,
Abstract>Questions and answers about VHF/UHF FM antennas.

Digest>This article is written in the format of questions and answers. It describes different kinds of antennas useful on VHF/UHF FM.

For general purpose home station use, the author recommends a vertically polarized antenna, since almost all FM stations use that polarization. If an operator's interests are primarily for local contacts and nearby repeaters, an omnidirectional antenna is simplest and least expensive. If, on the other hand, there is a desire to access distant repeaters, or make simplex contacts over a considerable distance, a beam antenna would be called for. High-gain beam antennas are quite practical at VHF/UHF, and are available from commercial vendors; alternatively, it is not difficult to build them oneself.

For fox hunting (competitive direction finding), home-built antennas are most common. Usually they are built from PVC pipe and other materials readily available from hardware and discount stores.

Because of the short wavelengths, effective portable or temporary antennas can often be made from fine-gauge wire and masking tape. The ARRL Antenna Book contains all the information necessary to build a wide variety.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Add a PTT On/Off Switch to the AEA PK-232MBX Multimode Communications Processor
Author>Miller, Dave - NZ9E
Source>QST Jul 95, p. 73
Abstract>Making it easy to disable the transmitter when operating digital modes.

Digest>NZ9E wants an easy way to prevent his transmitter from keying when operating digital modes. Software commands will not do the job because, in many cases, the commands are stored in a buffer and the computer will act on the buffer's contents until they are all completed.

He accomplished his purpose by inserting a SPST switch in the lead to the emitter of transistor Q4 of the PK-232MBX. When the switch is open, the push-to-talk (PTT) function is disabled.

Diagrams accompanying the "Hint" illustrate the location of the switch both in schematic and also semi-pictorial manner.

Title>HK2:Making Your Own QSL Cards
Author>Hotchkiss, Scott - KR4GJ
Source>QST Jul 95, p. 73
Abstract>Printing QSL cards using custom-made rubber stamps.

Digest>KR4GJ designed his own QSL card using block letters for his call, a humorous drawing, the data block common to most QSL cards, plus logos of the ARRL and also the DX association of which he is a member. He combined his hand-made drawings with images of the logos and the QSL block on a copy machine to create the photo-ready art work required, then a local stamp maker made the requisite rubber stamps at a modest cost.

Title>HK:Quick and Dirty Emergency Battery Holders
Author>Beach, Ted - K4MKX
Source>QST Jul 95, p. 73
Abstract>Make dry-cell holders from paper, tinplate cut from cans, and rubber bands.

Digest>K4KX often finds need for a holder for a number of dry cells. He has learned to make serviceable holders from pieces of bond paper, strips of tin-plated steel cut from "tin" cans, rubber bands, and tape.

He forms the body of the holder by wrapping paper around the required number of batteries, laid end-to-end. The paper is taped to form a tube. Quarter-inch wide strips of tinplate are cut from the can after the coating, if any, is rubbed off with steel wool. The positive contactor is made of a strip of metal bent into a stirrup shape to touch the positive button on the top battery and extend down the sides, outside the paper tube. Both ends of the strip are bent into hooks. The negative contactor is made from a strip cut to a length equal to the diameter of the batteries. A "V" shaped indentation is bent into the center to provide a somewhat sharp edge to contact the zinc bottom of

the battery.

To assemble the holder, he holds the stirrup in place against the positive contact and the negative contact strip against the bottom of the stack, at right angles to the positive strip. With a single rubber band, he hooks one side of the top strip, stretches the band around the bottom so that it fits into the "V" bend, then up the opposite side to the other hook.

Connecting wires are clipped or soldered to the metal strips.

FEEDBACK (FB)

Title>FB1:"Try a 2-Meter Flexi-J Antenna
Author>Newkirk, David - WJ1Z
Source>QST Jul 95, p. 74
Abstract>Addition of spacer dimensions to the original article.

Digest>In QST Jun 95 H & K, article: "Try a 2-Meter Flexi-J Antenna", by Mandeville, Bob - N1EDM did not indicate the dimension of the spacers separating the two sides of the "J". They should be 2.75-inches (70-mm.) long.

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular section of QST. It features articles of primary interest to newcomers to the hobby.

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Jul 95, pp. 56-57
Abstract>Questions and answers of interest mainly to newcomers.

Digest>Questions discussed in this issue include: antenna counterpoises; AM broadcasts heard on an HF receiver; the effects of insulated wire on antenna resonance; a problem with Oscar 22's computer; the G5RV antenna; VGA vs. Super VGA computer boards; the shelf-life of crystals; how to find Keplerian elements via Internet; among others.

Title>NHC2:A Practical Stealth Antenna
Author>Muscolino, Bruce - W6TOY/3
Source>QST Jul 95, pp.
Abstract>How W6TOY launches "invisible" antennas from the window of his condo to a tree in the yard.

Digest>W6TOY/3 operates QRP from a third-floor condo in Maryland. The condominium association has an iron-clad rule forbidding any kind of an outdoor antenna, whatsoever. He developed a way to erect temporary, stealth antennas during the intermittent periods when he is at home and

able to operate his radio.

Some distance from the apartment building is a tree that provides support. Using a slingshot from his window, he shoots a random-wire antenna made of No. 26 enameled wire directly to the tree.

His success in launching the wire is largely due to the preparation he makes before shooting. When preparing for a launch, he wraps an adequate length of wire around the periphery of a tapered plastic drinking glass. Three strips of double-sided tape are attached to the glass running from top to bottom. He winds the wire around the glass leaving some space between turns. At the end, he leaves about three feet as a "leader", attaches a 1/2- or 3/4-ounce lead fishing weight to the end of the wire and wraps a single layer of plastic electrical tape over the weight.

He uses a small vacuum vise to hold the wirewound glass at such an angle that, when the weight is shot up and away, the wire will coil off the glass with a minimum of friction. Then he takes aim, and fires!

He finds that an intense thundershower, hail storm, or strong wind will break the wire and blow it away. However, usually an antenna will last a week or more, and they are easily replaced!

Title>NHC3:Check Out the New ARRL Handbook
Author>Schetgen, Robert J. - KU7G
Source>QST Jul 95, p. 61
Abstract>A sales pitch for the new edition of the Handbook.

Digest>The author of this article is the Editor of the ARRL Handbook. It has been published ever since 1926 and a new edition comes out every year. It contains almost all of the information, both technical and non-technical, that a ham needs to operate amateur radio. For experienced hams, each yearly edition contains the information about new developments that will keep them up to date with the rapid technological developments being made continuously.

Title>NHC4:Build a Weatherproof PVC J-Pole Antenna
Author>Blanchard, Dennis - K1YPP
Source>QST Jul 95, pp. 62-64
Abstract>Construction details for a VHF or UHF antenna built inside a weatherproof tube.

Digest>This article describes, in detail, how to build a J-Pole antenna for the 6-meter, 2-meter, or 1-1/4-meter band. It uses a length of 1-1/2-inch (38-mm.) PVC pipe as the weatherproof housing and a length of either 300-ohm or 450-ohm twinlead as the antenna.

First, the twinlead is cut to an accurate length for one of the frequencies listed in a table with the article. The two wires are soldered together at one end, forming the bottom of the "J". The

full length of the wire is left intact on one side of the twinlead and, to form the "hook" of the "J", the other side is cut and a 1/4-inch (6-mm.) length of the wire removed. A coax connector is soldered in place a short distance above the shorted bottom of the "J".

It is necessary to keep the antenna wires centered inside the tube. For that purpose, a sleeve of insulating foam of the type used for thermal insulation around pipes is inserted inside the pipe and the antenna slipped into it. End caps are glued on the tubing to complete the assembly.

Title>NHC5:A Low Profile 10-Meter Antenna
Author>Smithson, Brian - N8WRL
Source>QST Jul 95,
Abstract>Constructing a 10-meter antenna using Radio Shack parts.

Digest>Radio Shack sells a 102-inch long stainless-steel whip (Catalog No. 21-903), and also mounting brackets to erect it. N8WRL shows how that can be made into a very effective 10-meter ground plane antenna.

The 102-inch length is meant to be used on the 27-MHz. Citizens Band, so is slightly too long for resonance on the 10-meter band. A short piece must be trimmed off to put the resonance at any desired frequency within the band. The author found that he had to cut about 2-inches off the end for it to resonate at 28.4-MHz. He used a standard Radio Shack mirror/luggage mount and 3-inch lag screws to fasten it to the edge of his roof. After the whip was mounted, he added three 8-foot radial wires that he attached directly to the mounting bracket. He made no attempt to insulate the wires and the mounting bracket from the wooden structure of the house.

Mr. Smithson reports that the antenna is giving good performance whenever the 10-meter band is open.

RADIO TIPS

These are short items, scattered among the articles in the New Ham Companion section, of interest to newcomers.

Title>RT1:Hamfests, a Summer Tradition
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Jul 95, p.
Abstract>Description and advice regarding hamfests.

Digest>Hamfests are gatherings of hams that range in size from the Dayton HamVention, which routinely attracts some 40,000 attendees from throughout the world, to small affairs attended by only a couple of hundred people. The large ones usually have technical programs and elaborate exhibits by manufacturers and dealers of amateur radio gear. The small ones may not have either, but all hamfests feature flea

markets where all kinds of radio gear change hands.

The author suggests that attendees should budget their money, in advance. Negotiating with the sellers is expected and haggling in a friendly and reasonable manner will be found helpful. The best deals are usually made in the first and last hours of each event. Be sure to test any expensive gear to be sure it is in working order before parting with the purchase price. Make sure always to get the seller's name, address, and phone number; agreement should be reached about what guarantees are made regarding the condition of the equipment, before the deal is closed.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:The Pavek Museum of Broadcasting
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Jul 95, pp. 24-26
Abstract>Describes the museum in suburban Minneapolis.

Digest>The late Joseph Pavek - W9OEP, was an avid ham and collector of antique radios for many years. He accumulated what may be the most complete collection of antique radio gear anywhere. Long before he died in 1989, he established a museum which is located in St. Louis Park, MN, just west of downtown Minneapolis.

The article contains a number of photographs of the interesting and impressive displays that should be of interest to any ham.

Title>GI2:Radio Astronomy and the Radio Amateur
Author>Welsh, Robert - N3RW
Source>QST Jul 95, pp. 46-48
Abstract>History of radio astronomy and amateur activities at a Philadelphia high school.

Digest>The author is a teacher at the Philadelphia High School of Engineering and Science. His article is a review of the history of radio astronomy, starting with Karl Jansky's discovery of radio noise originating at the center of our galaxy. After his results were published in 1932-33, more than ten years transpired during which only one person in the world pursued an investigation of celestial noise. That man was a radio amateur, Rote Greber - W9GFZ. Working with an antenna in his back yard in Wheaton, IL, he produced the first radio map of the Milky Way and single-handedly showed that radio could be applied to astronomical research.

The other ham who made (and is still making!) great contributions to radio astronomy is the famous John Kraus - W8JK. At the Ohio State University, he invented and built on a shoestring with student labor, one of the largest radio telescopes in the world. Since producing one of the earliest and most complete full-sky maps of the radio universe,

his telescope has been carrying on the longest running search for extraterrestial intelligence (SETI) in the world.

The author of this article, and his students, have built a radio observatory in and on the roof of the high school building. He has introduced many students to the fields of radio and radio astronomy.

Title>GI3:Yachting in Kansas
Author>Brauser, Deborah - N0KZR
Source>QST Jul 95, pp. 49-50
Abstract>Wichita hams put on a "special-event" in connection with a yacht race in San Diego, California.

Digest>Wichita, Kansas, is on the Arkansas River and many people there are small boat enthusiasts. One of the citizens of Wichita, Bill Koch, is an accomplished ocean sailor who won the America's Cup in 1992 at San Diego. His winning boat, the Jayhawk, is on exhibit, high and dry, in front of the Wichita Boathouse, which is a museum of boating. He now heads the America-3 Foundation that owns and sponsors a racing sailboat of that name that participates in ocean racing. Their boat is notable for being crewed exclusively by women drawn from New Zealand and the USA.

The America-3 was scheduled to race in the World Yachting Championships, held in 1994 in San Diego Bay. Wichita hams decided that the San Diego event should be cause for a ham "special-event station" to operate from the Wichita Boathouse commemorating the first all-female yacht racing team in history.

They raised a G5RV antenna in inverted-vee configuration at 100-foot height from the mast of the Jayhawk and made 400 contacts on HF and packet during the two-day event. By special arrangements with the Point Loma Amateur Radio Club in San Diego, reports of the race were relayed from an observers' boat to shore via 2-meters, and on to Wichita via HF, where they were posted for a group of spectators. The America-3 won the race, although the win was negated by a technicality.

Title>GI4:The Transmitter That Sold Itself
Author>Kerr, Mike J. B. - ZL2BCW
Source>QST Jul 95, pp. 51-53
Abstract>ZL2BCW found an ancient Collins transmitter at an antique store in New Zealand, repaired it, and put it on the air.

Digest>In this article, ZL2BCW relates that he found in an antique shop an ancient Collins transmitter of a type built in 1934-35. It was in very poor condition with physical damage evident, and contained no tubes. He bought it and spent the succeeding year or more cleaning and repairing it.

Eventually he was successful and put the rig on the air. The article relates the enjoyment and gratification that he enjoyed at his success.

Thanks to VK6ACY, I finally finished a 5BWAC. My XYL's comment on the certificate says it all: "What's that, the cover letter?" Not too long ago, the WAC certificate was a spiffy little document. I have a couple of _QSL_ _cards_ that look nicer than the current edition. And I wouldn't mind paying a few bucks for a nicer certificate, either. Is there any way to petition the IARU to change their printer?

I have a '95 Geo Prism and have used a 50 W, 2 Meter and 440 unit in it with various antenna and power connections. Only problem I've ever noticed is that the
cruise control will disengage when I transmit on 2 Meters. No big deal.

Also have used a 100W 6 meter rig with no problems in that car. For what it's worth, the cigar lighter connection seems adequate for the 50 watt rig with minimal dimming of the lights when I key up. On some of my other cars there is a
pronounced dimming when I use their lighters as a power source.

As I expect you know, the Prism is essentially a Toyota.

I'm interested in building a low power crystal controlled CW transmitter for
for the 2m, 220 MHz, or 70cm bands. (radio to operate on one freqency only...
the 220 band would be nice, but I'm interested in the others as well).

The application is a low speed data link involving microcontrollers and
PC's...I want to keep it as small, light, and inexpensive as possible.

I'd appreciate any leads on schematics, plans, kits, etc.

Thanks,
Eric.

Hi!

Congratulations on passing your Technician exam! I will be e-mailing you CQ magazine's New Ham Welcome Pack, which you should find helpful. Regarding your question of whether you can take the General theory test without first passing a code test, the answer is yes. You may take the General exam, and if you pass it the Advanced and even Extra (assuming you pass the Advanced). You get test-element credit that's good for one year, meaning that you then have one year to pass the necessary code tests (13 for General & Advanced; 20 for Extra). By the way, you don't have to work your way up the code test ladder. If you pass the 13 wpm exam, it's assumed that you also can copy 5!

> Hello, I just recently purchased a dtmf mic for my UHF Motorola
> Micor. Can someone tell me the mod that needs to be done to the radio
> so the dtmf will work?

The standard Moto touchtone microphone won't function properly on a
Micor - the PTT circuit is too lightweight. The symptom is that
the radio doesn't key when a button is pushed on the microphone.

However, since the mic element overrides the touchtone generator when
the PTT button is pushed, you can't just squeeze the pickle and punch
the buttons.

What worked for me was to press the PTT button, then push the first
tone button and release the PTT. The delay circuit in the microphone
does have enough to hold the radio keyed, so you can then dial the rest
of the sequence.

Just to confuse things, there are several models of the Moto touchtone
microphone. Most are cable differences, some have different wiring in
the ptt circuit. You can change one to another by fiddling some part
values on the circuit board inside the mic. There are other options
as well. You really need a manual for this.

Or upgrade to a Syntor or later radio.

Good Luck!
- Brian

Hi Max, you must not have been reading the newsgroup for very long. A
couple of times a year, this discussion runs for a couple of weeks.

It has been established by two independent researchers who write/draw
for newspapers, that "ham" is a shortened cockney pronunciation of
the word "'amateur" and is thought to have originally come from the
theatre (not theater, you dummies :-). Amateur actors were know as
hams and thus the expression, "hamming it up", applied to overacting.
It was logical to assign the term to a radio amateur as well since
many of the English hams called themselves "hamateur radio operators".

Can anyone point me to a source (old or new) that would list
total number of hamradio operators by state and/or by country?

I already phoned the ARRL and the FCC and came up empty handed.

Thanks,
John, WB3ESS

Oliver,

You raise a VERY good question. Way back in the "old days" they didn't publish all the answers. You actually had to KNOW the theory. It worked fine, and it would work fine now, too.

Good luck on your pugrade.

Been QRT for a long while, but here is a long delayed echo re: question pools.

I have had very out-of-date question pools posted on the internet (it's a secret lest I get questions again) but ignore that site!

The latest and greatest question pools are located on the ARRL web/ftp site that is maintained by the Boston Amateur Radio Club on a University of Oakland (Michigan) system.

This site is addressed in a periodic post by Michael Tracy.

The site is: oak.oakland.edu
login as anonymous and send your e-mail address as password (prompted).

The pools are located in the directory pub/hamradio/arrl/infoserver/vec.

If you cannot do ftp, then those are available as a mail-echo. Read Michael's post and it will explain mail-echo far better than I could.

Now Derek,
I've told you a million times, don't exagerate!

The ability to "do" CW as you well know, IS to salute the flag, eat apple pie, kiss mother's picture, and be a fine upstanding LAW abiding citizen!

To add an HT on one's hip IS to add police powers and privilages, therefore DIS-allowing law abiding, pie eating, mother kissing...

I KNOW you have posed the equivalent... CW = Good, FM = Bad.

Our hobby makes room for all, including the criminals... US!!!

As for lawers... you don't have to be a felon to become one, but it helps finding the clients when you ARE one!

With my blue striped outfit on...

SB SPCL ARL ARLX035
ARLX035 ARRL HQ staffer honored

ARRL Senior Laboratory Engineer Zack Lau, KH6CP, has received the John T. Chambers Award of the Central States VHF Society, for contributions to VHF.

The award was begun in 1970 when it was given to John T. Chambers, W6NLZ, for his work with KH6UK in the 1960s proving the existence of West Coast to Hawaii tropospheric ducting. (Chambers has since died and his call sign reissued).

Lau, 32, is the 23rd recipient of the Chambers Award since its inception. A graduate of the University of Pennsylvania, he has been licensed since 1978 and an ARRL staff member for nine years; he's senior laboratory engineer.

Lau received the award at the Society's 29th conference in Colorado Springs on July 29. He was cited not only for his investigative work on the VHF and UHF bands but also for his help, as an ARRL staff member, in fielding questions from other amateurs. KH6CP/1 is a mainstay in VHF and UHF contests as well, often appearing from New England hilltops. Zack Lau also is widely known for his low-power HF accomplishments, including a number of ARRL Sweepstakes awards in the under-5-watt category.

In 1993, the most recent year for which statistics are available, the Central States VHF Society had 267 members in 39 states and three foreign countries. The Society was founded in 1967. Each year, the ARRL publishes the Proceedings of the Society's conference; the 1995 Proceedings are now available from ARRL Headquarters.

From ARRL Headquarters
Newington CT August 2, 1995
To all radio amateurs

SB SPCL ARL ARLX037
ARLX037 3 hams die in LA shooting

Three Los Angeles-area amateurs are dead following a shooting rampage at a city facility.

A disgruntled radio repairman for the City of Los Angeles on July 19 is charged with killing four men, all supervisors at the city's Piper Tech Center. The three amateurs killed were Marty Wakefield, N6BZ, 57, of Venice; Neil Carpenter, KA6QIB, 61, of Palmdale; and Anthony Gain, W6KFN, 78, of Montebello. A fourth supervisor who was killed in the attack, James Walton, was not a ham.

Gain, an Advanced class licensee, was trustee for a repeater operated by the city. He had chosen to continue to work rather than retire, said a coworker, Rob Hanson, AA6BN. Wakefield was an active DXer and until May had been an ARRL volunteer examiner. Carpenter held an Advanced class license. All four shooting victims also held FCC General Radiotelephone licenses.

All three amateur-licensed victims were active in the Los Angeles City Amateur Radio Volunteers, a club aimed at helping city employees become licensed, with an eye toward emergency preparedness functions, Hanson said.

The alleged killer has been charged with four counts of murder.

I am attempting to send a binary message over a radio link, using a Paccom modem to store the 9600 baud message from a GPS receiver, then sending as (I think) a 2400 baud message over the radio link (a Kenwood VHF unit, not really built for the job, but it's all I've got). My question is : does anyone know how I could measure the output rate of this radio - as I said, I think it transmits at about 2400 baud (or is that bps?!). Any suggestions would be most welcome, and stories of any experriences with packet radios would be too.

Source record: 241235

I have had my IC-2SRA for a couple of years now...

Basically, I like the radio/scanner.

Some comments:
- 2 radios = larger/faster battery drain (You can shut off either radio to same power if you desire)

- Sensitivity appears pretty good on the scanner side, but seems to suffer more from intermod than my other scanner.

- No need for repair so far....

- Always thought about putting a long wire antenna on the scanner side to see if there would be any improvement, but kind of felt it would be useless. The scanner antenna appears to just be about an 8 inch vertical that plugs in. (Not a coaxial type input)

73 and good luck

2146. Radio Shack 2m amplifier

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-03 00:00:00 UTC
From: david@med-buspheb.bu.edu
Message-ID: <3vrds9$o5b@news.bu.edu>
Source record: 241087

I have seen the 2 meter 30 watt amplifier and I was wondering if anyone has any experience with it.

It claims that input is 0.5-5 watts, and outputs 30. Does this mean that if you put in 1 watt, you still get out 30 or do you need to put in 5 to get 30 out?

It seems like a reasonable way to get around buying a mobile unit.

Thanks.

Another common problem is forgetting to set your FTP transfer mode to "binary" and downloading the file as an ASCII file. PKUNZUIP will return a similar (or identical) error message when it tries to expand the file. I used to forget to "set binary" or "kermit -i" all the time and ran into this "reminder" every time!

Doesn't change a thing; my observation was "don't waste your
time trying to get help [from the USCG] using Morse code", and
we all know that the USCG no longer offers Morse services, even
at the COMMSTAs. Nothing inflammatory, just an observation.

Source record: 241092

'lo from melbourne, fl..

well, i survived erin with only some minor damage to the car from a fallen tree (small dents in the roof..apparently the tree just rocked over in the wind when the pavement gave way...i parked as far away from everything i could think could fall - live in a wooded area and everyone tried for the clear spot. should have turned down the permission to go home and catch some Z's. and the area is less wooded than it used to be...i got off lucky.)

lots of impassible streets and standing water. i believe officially the street in front of work is now officially closed due to flooding south of here and potental for the borrow pit just north of here to break out of it's banks.

so what is a fool like me doing at work? i have no idea...8)..

so far as i know there's been a minimum of deaths in the area (4 i think is the current count) -- lots of damage with roofs coming off businesses and as of last night about 100,000 people w/o power. (home is near a major feed point..i stayed up). Red Cross w/o mains power for several hours tuesday morning. several shelters w/o power...

storms following Erin have done more damage than the actual hurricane, in terms of adding to the flooding and impeding aid and repairs.

we need to figure out how to put up real antennas at the shelters before/after the storm -- communications work was spotty at times because cell radiophones/amateur/800 Mhz cop radios and such were being stressed out and battery power was getting low for folks on duty long term. i didn't have enough capability to be able to put a high power (25W) station at a location w/o mains power at this time. handitalkies would cut it if they had the advantage of either a better repeater matrix or outside antennas.
red cross operating positions need to be rethought a bit -- the HF radio system (the centerpiece) was not used.

generally, all forms of communications were used -- phone systems were overtaxed so we'd run a call request over amateur to the shelter and have the shelter call in to a fresh cell phone, for example -- generally everyone and every thing got to take it's share of the traffic..

things look better for friday. at least most at work have secure houses and supplies for the next few days. most of the water supply systems came through w/o problems - some areas have sewage pump problems and some areas are boiling water before use (farther inland from us).

interesting detail - the vines server stayed up (meaning no major power disruption here) but all the print services were set up with their queues set

up to not accept jobs...they weren't left that way when we bailed...)

more later ... bill wb9ivr at the office (we still have a roof! hurray!)

2153. Ham radio on Public Transit?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-03 00:00:00 UTC
From: regor@shell2.best.com
Message-ID: <3vqs3t$961@news1.best.com>
Source record: 241094

I have been using my HT while riding the bus to work for a few months. I have gone through about .. maybe a dozen different drivers (since they do change, and my exact time leaving the office does vary sometimes). None of them have ever said a word or complained. None of the other bus riders ever complain (they do look at me, but even the ones who sit in front and behind never complain). I always lower my voice (sometimes my friends on the other end complain about mumbling), most of the time I do not use headphones, but I do carry them with me if its especially noisy or somebody complains. I usually keep the volume at a level that I have to hold the radio up to my ear to hear. When I have to move over to make room for another person, I politely put the radio away.

The past two days, this one bus driver, and older female, complained when I turned the radio on. There was one other rider in the bus at that time (I have to get to work at 8AM - this is pretty early in the morning) She said "Can't have the radio on in the bus". I have always interperted this to mean no BoomBoxes-playing-loud-music. Aparently, this driver does not allow ANY type of electronic radio-like devices. She said no walkmans (even with headphones), no cell phones, NO RADIOS! For all practical puroposes, my HT is a cell phone to lay-people. She would not permit a business man to use a cell phone to conduct his business!

I called the Transportation Agency to complain, and they said they would talk to her. We'll see if the bus driver with the "itch" will even stop for me at all. In general, this driver has an unfriendly attitude towards anyone getting on the bus, does not wait at places she should stop for 3 minutes, never smiles, never says anything to anyone, does not wave at other more friendly drivers! (Every single one of the other drivers I have had has done at least one or more of the above things on a daily basis) Its possible that her mean attitude is because I am 18 years old, just out of HS. But I go to work every day just like anyone else, I pay my fairs and my TAXES so this *itch has a job, whether I ride or not! I should be allowed some courtesy!

I was curious if any of you other hams out there have had any experience with using ham radio on public transit, whether good or bad, as this is my first bad experience. It really wants to make me continue to use public transit! Reply any way you wish, by news, email, or packet.

Thanks and 72/73 to you all.

Congratulations on passing the code test!

I passed the 5wpm test last October and passed the 13wpm in January. I only passed th 13 because I think I was lucky on the multiple guess test. Now that I am a General class license holder, I am re-practicing the code by listening on the Novice bands. I hope to get on the are with CW for the first time this week!

Don't do what I did and rush just to get the General class license. Get on the air and have fun while you pick up speed. I'm embarrassed to go on the air at 7-8 wpm for the first time while holding a General class ticket!

Good luck and have fun!

DX Bulletin 42 ARLD042
From ARRL Headquarters
Newington CT August 3, 1995
To all radio amateurs

SB DX ARL ARLD042
ARLD042 DX news

This week's bulletin was made possible with information provided by Charlie, KY0A, Bob, WB2YQH, The 599 DX Report, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

UPDATE ON JUAN FERNANDEZ, CE0Z. The September operation is still on. Plans call for the use of full size delta loop antennas for 160 and 80 meters, both hung from a 150 foot commercial tower and Yagis for higher bands. Emphasis will be on low bands, RTTY and WARC bands. QSL via K0IYF.

UPDATE ON HEARD ISLAND, VK0. Equipment is being crated for mid to late August shipment to Australia. Gear and team should both arrive on Heard on November 12. A cook/camp manager is still needed for this DXpedition.

NAMIBIA. Charlie, KY0A, will be active as either V52YG or V52/ZS6YG, from August 7 through 10. This before sunrise/after sunset operation will be on 160, 80, 40 and 30 meter CW only. Charlie hopes to try some 17 meter QSOs late in his trip. QSL via KY0A.

CHRISTMAS ISLAND, VK9X. Uwe, DJ9HX, is active from Christmas Island as VK9XI. He has been worked on 14027 kHz at 1123z and 14177 kHz at 1422z. QSL via DJ9HX.

ANDAMAN ISLANDS. VU2AU has been on 14195 kHz at 1700z arranging schedules with Mani, VU2JPS.

BENIN, TY. Sigi, DJ4IJ, was supposed to be active by now as TJ1IJ, though there have been no PacketCluster spots on the New England network as yet. Stay tuned.

ISLE OF MAN, GD3. Dave, GD3NKC, will be working mainly CW on the low bands from August 5 to 19. A Wednesday SSB schedule will be on 1870 kHz at 2130z.

UK BASE CYPRUS, ZC4. Listen for ZC4C by OK1ADM, OK1RF and OK1RI August 6 to 18, including a stint in the WAE CW Contest. QSL via OK1RI.

SAINT PIERRE AND MIQUELON ISLANDS. FP5AA, operated by K2RW, should be on the air August 15 to 19. Try 14165 kHz between 1100 and 1200z to arrange schedules. QSL via K2RW.

THIS WEEKEND ON THE RADIO. The ARRL UHF Contest starts at 1800z August 5 and ends at 1800z August 6. Exchange grid square locators on authorized amateur frequencies above 222 MHz. Complete rules appear on page 112 of July QST.

An official W1AW Qualifying Run with speeds from 10 to 35 wpm in 5 wpm steps will start at 0200z August 6.

The North American QSO Party, CW, sponsored by the National Contest Journal, is from 1800z August 5 until 0600z August 6. Limit your output power to 150 watts. Exchange name and state/province/DXCC country.

The YO DX Contest, sponsored by the Romanian AR Federation, runs from 2000z August 5 until 1600z August 6, on 80 through 10 meters. Exchange signal report and ITU Zone.

For more information on these events, check page 114 of July QST.

CREN 50th Anniversary Contest, sponsored by Club de Radio Experimentadores de Nicaragua, takes place on August 6 from 0000z to 2400z. Choose CW, SSB or RTTY, single operator only, on 40, 20 and 15 meters. Exchange signal report and consecutive serial number. For 50 points, work YN1YN, the HQ station of CREN, which can be worked only once. For 10 points, work YN1ATM or YN1OC, founding members of CREN, also only once each. Other YN stations net 5 points each. And all other QSOs net 1 point per QSO. Final score is total QSO points multiplied by 50. Send log and summary before September 8 to CREN, Box 925, Managua, Nicaragua.

>Jim
>KD4IHG

You should have the directory written in your path (the one in the autoexec.bat file)
In your case it would be SET PATH= C:\WINDOWS;C:\;C:\DOS; C:\(whatever the directory of
your PKUNZIP is in).
Thats all I can figure. If that does not work, then redownload the file from an FTP site.
They all should have it.

2160. MSYS PACKET BBS -- Forwarding via the Internet

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-03 00:00:00 UTC
From: wf0a@southwind
Message-ID: <3vpe08$2sm@opal.southwind.net>
Source record: 241101

I would like to experiment with forwarding packet BBS messages via the internet. I use the MSYS packet BBS software and have discovered that if I take all the messages in my mail.bak file and merge them all into a giant text file that I can then include that file as an attachment to an E-Mail message. When I receive the E-Mail message the text file is saved to my harddrive. I then use the import command in MSYS to import all the messages into the BBS. It really works great. I operate the WF0A bbs which supports the Wichita, Kansas area. At the current time there is no good path out of the Wichita area and there are no HF links available. I would appreciate any comments and suggestions on this matter.

Richard wf0a@southwind.net

Exactly. They've paid the price for their actions. Supposedly, the slate
is clean.

>>One wonders how having "done their time" would make up for their violent
>>acts against society such as murder, rape, armed robbery... These
>>type of folks should be kept off of the air.
>
>Why? What is the correlation between a past criminal conviction
>and poor radio traits?
>
>By the way, I know at least one amateur personally that has shot
>someone to death in the past. He's a fine ham. So what?

So, let me get this straight...there are people who want to restrict
ex-felons from ham radio..the same hobby that may of us proclaim as
wholesome, educational, honorable, and worthwhile. Seems to me ex-felons
(or even ones currently serving time) could actually BENEFIT from some of
the services, skills and ideolgies we have to offer.

This thread is one of the biggest wastes of bandwidth I've seen in a long
time.

Rich,

Perhaps you discussed this before and I missed it, but I'm curious as to why the results took so long to publish. Seems that CQWW RTTY should be a lot easier to tally than the "big" contests. Yet we're looking at nearly a year between contest and publication now. I'm not trying to be overly critical, just curious.

Doug Hall, KF4KL

2163. 2nd Asia-Pacific Sprint

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-03 00:00:00 UTC
From: je1cka@dumpty.nal.go.JP
Message-ID: <199508030115.KAA03843@dumpty.nal.go.jp>
Source record: 241104

Hi all

We AP-Sprint contest committee invite you to join our 2nd run
of the 2hour sprint contest.
We expect to have a lots of activity in Asia-Pacific countries
in this 2nd run.

Tack Kumagai JE1CKA/KH0AM
TEL:81-30-066-6408, FAX:81-423-93-4449
Internet: je1cka@nal.go.jp

==========
2nd Asia-Pacific Sprint

Objective: "To work as many stations within the defined Asia-Pacific region
within the 2 hour time limit. Only QSO's with at least one or
both of the stations being from the Asia-Pacific region
count for points"

Winners: Each DXCC country, continent plus one overall.
Winners receive a cool Asia-Pacific contest T-shirt.

Date: Sunday Sept 30 1995
Time: 1230-1430 UTC

1. Bands 20m & 40m
2. Mode CW
3. Power limit: 150W output
4. Category: Single op, Single radio.
5. Exchange: RST + Serial # beginning with 001
6. Points: 1 point/QSO with each station in Asia Pacific region.
7 Dupes: Same station can be worked only once on the same band.
8. Mults: 1 mult/prefix (once only - not once per band) (WPX rules)
9. CQ'er QSY's at least 1 KHZ after a QSO. <- IMPORTANT!
10. Final Score: Points x Mults

Asia-Pacific countries for this contest:
(coutries from Asia side Pacific Rim to 180 degrees)

3D2(all), 1S/9M0, 9M2, 9M6/8, 9V, BV, BY, C2, DU, FK8, FW, H4, HL,
HS, JA, JD1/Ogasawara, JD1/Marcus, KC6 (Belau), KH2, KH9, KH0, P29,
T2, T30, T33, UA0, V6/KC6, V7, V85, VK1-9(all except VK9X & VK9Y),
VS6, XU, XV/3W, XX9, YB, YJ, ZL(all except Chatham & Kermadec),

Results posted to: CQ-CONTEST@TGV.com, AP-SPRINT@dumpty.go.jp and
(hopefully) NCJ.

Rules and results will be distributed by the automated info-server.
Send a request mail to: info-contest@dumpty.nal.go.jp
with the command in the body: #get ap-sprint.rule

All logs must contain complete QSO information plus a summary sheet
and your T-shirt size.

>....

A large percentage? Are you claiming that a large percentages of all
people have committed felonies and haven't been caught? Perhaps a large
percentage of those who have committed felonies haven't been caught.

I bought a Dentron (model <something> jr.) antenna tuner for $30.00 US.
at a hamfest. Did I pay too much?

I was going to use it with a heath HW100, -- now I know I also need
an swr meter. oops, here comes yet another purchase. Nevertheless,
I would gratefully pay cost + postage + thank-you-very-very-much for
the photocoppied manual.

Other than that, I would like to just get a quick overview on how to
get up and running with the thing. It has one meter, and two knobs:
(and no instructions):

#1 transmitter match a,b,c,d,e,f... switch.
#2 antenna match variable.

The back has tx in, ant out, ballenced out, and unballenced out.

any help greatly appreciated. If you have the manual, please contact me
at drumm@uwec.edu.

Thanks!

2172. Antenna Painting

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-03 00:00:00 UTC
From: headshrnkr@aol.com
Message-ID: <3vrmo3$eeh@newsbf02.news.aol.com>
Source record: 241113

This may be a rather odd question, but does anyone know or have an opinion of what a coat of paint would do to an antenna? Specifically I am considering installing two KLM antennas, one for 2m and one for 70cm. Due to restrictions presented by my homeowners association antennas are frowned upon, although not banned all together. To minimize the visual impact of such an array I was considering painting the antennas and mast with a light blue, "sky blue" actually, paint. My concern is if or how this may effect the antennas useage.

My other option, is to locate the antenna array on the rear of my home. However, this would require a cable run of aprox. 150 feet. I am not certain how much this would degrade the signal. Is this run something that could be overcome with preamps or other means?

Any and all input is appericated in this matter.
It is helpful to email replies to headshrnkr@aol.com
Thank you.

>get 30 out?

I have one - or should I say "the shop" has it right now. First of all, figure 2 watts in = 20 watts out (at 13.8v); .3 watts in = about 5 watts out.

Why is it in the shop? I've owned it for three months and have hardly used it, but recently I discovered that, when the unit is on, receive capability in the 2-meter band is way, way down! OUTSIDE the 2-m band it still receives fine, so maybe the receive helical filter went TU. At least it's under warranty....

* US I Last Frontier ARC "WL7CND" X
****
July 30, 1995

Please add a couple more islands to your island directories. Guemes Island (WA-53S) and King Island (ND-01L). Well, my vacation is now over so I can get to work QSLing. The QSLs from my recent Douglas Island and Fox Island operation are pouring in daily! It was nice to work the following US I enthusiasts from King Island on Lake Sakakawea in North Dakota: Kim, KD1VE... Larry, N4VA and Dee Dee, AA7KE on Whidbey Island (WA-01S). I hadn't been to Governor's Island for 5 years and found it submerged on July 24th so moved on to King Island where Claire and I managed to work 3 countries in 200 contacts. Poor band condx, extremely hot weather (95+) and high water made it "interesting".

I'm often asked what kind of antennas I use on portable operations. Mostly I use a quarter-wave G5RV up about 25 feet or a vertical or beam on more serious endeavors. John, KG7RS, said he's had good results using a pair of "Hamsticks" as a dipole and supports the mast off a modified camera tripod. Perhaps we can entice John to tell us more in detail. What do you use on portable operations?

Page, WA3EOP, is expected to be on from Chincoteague Island, VA, as I type this bulletin. He will be assisted by N3TDN. They will also be on 6 meters! Page mentioned the QSLs for his Broomes Isl. operation are on order.

Hope you were able to pick up some "new ones" during the IOTA contest. Please remember our contest September 23 and 24.

73 and enjoy island collecting!
John, NL7TB

.....

I paint my antennas semi-gloss black and have no trouble. If you are painting on bare aluminum (a conductor) you are effectively "shorting out" the paint layer if it has any sheet resistance at all. I think I would test any paint I used on plastic in the microwave oven first. If it doesn't self-immolate there, it probably has a low-enough loss.

> Can anyone shed some light on this?

I'm no expert, so for waht it's worth, I'd think a charger for a 7V battery
might not charge a 12V pack -- at all, or at least very slowly.

Along these lines, I had a couple Icom packs I thought were dead -- they
wouldn't give eneough power to transmit even after a charge session in my Icom
quick charger. I put them on a slow charge for about 48 hours each and they
came back. Who knows?...

2177. Re: Dentron tuner (instruction / pay too much

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-03 00:00:00 UTC
From: steve6920@aol.com
Message-ID: <3vs1np$i65@newsbf02.news.aol.com>
Source record: 241118
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.homebrew

Hi Dan,
If that is the tuner I am thinking about, it has a meter on the front which indicates relative power (with a pot on the back to adjust sensitivity.
I have used the Dentron tuners for several years (both the Jr. Tuner and the much larger MT-2000A. I haven't had one bit of problems with them.
To operate the tuner, you set the bandswitch and then adjust both the transmitter and antenna capacitors for the best match. You can get a rough idea by adjusting for maximum background receiver noise. The settings will obviously change depending on the antenna you are using. The only rule of thumb is the lower the letter setting on the bandswitch, the more inductor you are switching in and the lower the operating frequency.

The is a post on the back for the single wire antenna to which you would hook a long wire or random wire antenna. If you are using balanced feedline, you would put a jumper between the single wire post and one post of the balanced output. There should be a dotted line on the back indicating where this jumper should be placed. In addition, if you are using the tuner on low frequencies and have a hard time matching the antenna, you may want to put this jumper in as the addition of the balun in the circuit will help tune low frequency long wires.
If you will verifiy you have the Jr. Monitor tuner, I have the manual and can copy it for you. You can send me E-mail with an address.

Hello,

My name is John Dunbar (KE6WBO). I'm into a whole host of things, but for this group, electronics and rockets are what I wish to emphasize. I need some answers to the following questions:

1) I need to find out a phone number or contact for repeaters in the 434Mhz range in the region near Gerlach NV area (Black Rock dry lake bed)?

2) What would be the funtional range of the signal once it is repeated, and sent on its way (range of reachable states)?

I will be attending LDRS next week (Aug 10 - Aug 14). This is a national meet of High Powered Rocket flyers. At this meet, I will fly an amateur TV, broadcasting on the 434Mhz frequency. I will be downlinking real time telemetry from the vehicle which should achieve an altitude ~23k feet. I would like to have a repeater, boost my signal so that hams in other regions of country, might view the flight. I you would please get back to me with the above info, I would be very happy! I don't have a home rig, so phone numbers and email addresses would do.

John

I tried that with an HT once and damaged one of my wife's car speakers. The squelch was set a bit low and the squelch tail was several db higher than the normal headphone audio output. When the repeater would drop...CHCHCHRUNCH squelch tail would blow you outta your seat. Wound up replacing the car speaker. Guess the moral is to run tight squelch or run the audio thru an equalizer first to tailor the audio (increase 1k to 3K response) and drop out the bass and high trebel.

* = New data. T index may have changed.
^ = IPS predicted T index

Asterisk indicates predicted value.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.

near 03 UT.

Two recurrent disturbance intervals were observed on 16-17 July
and 24 July. The peak A index for the month was 21 observed on 16 July.

During the last few months, previously strong patterns of recurrent
geomagnetic activity have weakened. This may indicate the approach
of solar minimum as such weakening has been the pattern during previous
solar cycles.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)

DATE T MUFs
4 July: spread F local night
6-7 July: spread F local night
10 July: spread F local night
19-20 July: spread F local night
25 July: depressed 15-20% during interval 00-05UT. Spread F observed
during local night hours.

Only one ionospheric depression was observed this month, on 25 July.
Depressions of up to 30% were observed at Hobart during the period
00-06UT on the 25 July. Northern Australian region stations
(Townsville and Darwin) were mostly unaffected by the disturbance
and remained near predicted monthly values during this interval.

Hello,

Forget all the expensive and sometimes worthless or marginal in results,
software. NOTHING does it like live qso's on the air as many a day as you
can get. Very quickly AND without you knowing it, your speed "suddenly"
jumps up and you beat that plateau. ONLY live qso's, complete with
errors and nervousness do the trick....and don't worry abt errors...tell
the other party as they will uinderstand. This advicer is tride and true
but few will take it because it either sounds too simple ot they're too
sacred. Great dividends if you do.

Good luck

BARTG * GB2ATG * NEWS * BARTG * NEWS * GB2ATG * BARTG
This is the - British Amateur Radio Teledata Group - News Broadcast
Service for all Amateurs and Short Wave Listeners interested in RTTY
Amtor, Pactor and Packet Radio.

This news is broadcast during the first full week commencing Monday
each month, to the following schedule..

Evening transmissions at 20:00 U.K. local time on 3.584 MHz. Mark.
RTTY on Monday-AFSK, Wednesday-AFSK and Friday-FSK.
Pactor-FEC on Tuesday.
Amtor-FEC on Thursday and Saturday.

Morning transmission at 10:00 U.K. local time on 3.595 MHz. Mark.
RTTY on Sunday-FSK.

Both frequencies could be +/- for QRM.

This bulletin is uploaded to the Packet network
as a BARTG @ GBR. file.

It is also posted on the -Internet- system via the INFO-HAMS list
on UCSD.EDU. and the mail group UK.RADIO.AMATEUR.

News for August 1995. Bulletin No. 032.

BARTG Information.
The annual BARTG rally takes place on Sunday 10th. September 1995.
at the Sandown Exhibition Centre, Esher, Surrey, close to M25 J 10.
Doors open from 10:00 until 17:00. Admission 2 pounds adults,
1.50 senior citizens. Children under 14 yrs. with an adult are free.
A licensed bar and cafeteria will be open throughout the day.
Large free car park. Good day out.
BARTG organise this rally with the data comms enthusiast in mind.
View the latest hardware and software. Constructors should find many
items of interest.

Contests.
The CQ-WW RTTY Contest starts 0000 GMT. Saturday September 23
until 2400 GMT Sunday September 24. on all 5 HF bands.
All digital modes may be used. Baudot, ASCII, Amtor and Pactor
(FEC and ARQ). Packet (no unattended operation or contacts through
gateways or digipeaters).
A station may only be worked once per band to score, regardless of
the digital mode employed. The same station may be worked on other
bands for additional points.

Classification:
1. Single operator all band and single band.
2. Single operator assisted, all band only.
3. Multi-operator, Multi-transmitter, all band only.

Categories:
Single operator entries may enter either
(A) All band or (B) Single band.
Single operator assisted and Multi-operator entries can only enter
the all band section.

Contest period:
The total contest period is 48 hours. All categories may work the

entire contest period.

Exchange message:
Within the 48 continental United States,
give - RST - State or VE area - CQ zone number.
All other stations exchange - RST - CQ zone number.

QSO points:
One (1) QSO point for contacts within your own country.
Two (2) QSO points for contacts outside your own country but within your own continent.
Three (3) QSO points for contacts outside your own continent.

Multipliers:
One (1) multiplier for each US state (48) and each Canadian area (13) on each band.
One (1) multiplier for each DX country on each band. KH6 and KL7 count as DX countries but not as states.
USA and Canada count as countries for the first contact on each band.
One (1) multiplier for each CQ zone (40) on each band.

Final score:
Total QSO points times total multipliers.

Logs must be post marked no later than November 27 to qualify.
Post to: Roy Gould KT1N, CW-WW RTTY DX Contest Director,
P.O. Box DX, Stow, MA 01775, USA.

Notes of Interest:

Easter Isl. (CE0), an international group will be QRV from this rare location with the call XR0Y from September 2-23. Some 30 members of the group hope to be QRV all bands and modes around the clock. There is no mention who provides for good propagation into EU *.

Flat Holm Isl. IOTA EU-124. Look for data activity from this island August 25-30, all data modes with the call GB5FI.
QSL to Glyn GW0ANA who has organised the trip.

Chad (TT), The operation late in 1993 by Ken WA4OBO as TT8OBO has failed to satisfy the ARRL DXAC on a technical point regarding licence to operate. The operation will not therefore qualify for DXCC credit.

North Korea (P5). This new country was added to the DXCC list of countries with effect from July 16. QSL cards for credit will be accepted by the ARRL from October 1 1995.

ARRL announce, the ballot to add Scarborough Reef to the DXCC countries list was voted 9 to 7 against addition by the DXAC. Membership correspondence to the entire DXAC revealed 157 votes (72 percent) against, 61 votes in favour.

Lybia (5A). A group of ukrainians are QRV CW and SSB with the call 5A1A from mid July. There are hints that RTTY may soon be added to the modes in use. KYFC. QSL current SSB operation via LZ2UA.

IH9/OK1DF/P was QRV from Pantelleria Isl. IOTA AF-018.
ZD7JP is on St.Helena Isl. AF-022.
KP2/N9NCX was QRV from the Virgin Isl. NA-106.
J8/LA4LN was QRV from St.Vincent and Dep. NA-109.
9Y4/LA4LN was QRV from Tobago Isl. SA-009.
8P6QA is on Barbados Isl. NA-021.
KW2P/CY9 was QRV from St.Paul Isl. NA-094.
VP5JM is on Caicos Isl. NA-002.
OZ1GBS is on Bornholm Isl. EU-030.

Islands On The Air. (IOTA). When HF conditions get as flat as this you can always find a few islands to work quite close to home.
100 confirmed gets your first certificate IOTA-100.
Administered by the RSGB, this award scheme offers a greater challenge than DXCC with many DX-peditions to activate new or rare island groups. Most modes are provided, even RTTY is becoming more popular. The greater the demand, the greater the service, so join in the fun and share the pleasure. KN.
Details from Roger Balister G3KMA.

Thanks this month to..
G3ZYP, PA3FXY, ARRL/ARLD, DXNS and VK2SG/RTDX.

BARTG caters for all DATA interests with information-components-kits-ready built units and professional software for the P.C. and other computers covering all common data modes.

The BARTG * New Improved MultyTerm * terminal unit for RTTY, Amtor, Pactor and CW transceive, plus FAX and SSTV receive (when used with the BMKMULTY software) conforms to the EEC Standard EN 50082-1:1993.
For details, please contact BARTG Components Manager, Ken Godwin (G0PCA). 11, St. Lukes way, Allhallows, Kent ME3 9PR. enclosing SASE. Telephone - 01634 271548.

Members receive a quarterly journal devoted to data modes. Beginners guides, which are currently being updated for most data modes, are available.

The group sponsors HF RTTY - Amtor - Pactor contests, administers its own DX and members award schemes and holds an annual rally.

Please address membership enquiries to :-
Membership secretary, Peter Adams (G6LZB), 464, Whippendell Road, Watford, Herts. WD1 7PT. enclosing SASE. Telephone - 01923 220774.

This news is produced by Bob Canning G0ARF.
Reports, QSL information and notes of interest are welcome for publication, copy to reach me before 25th of each month.
Packet at GB7MAD.#24. Telephone - 01544 388350. Post to CBA.

Several posts in this thread have referred to decisions by S.F.B. Morse regarding characters in the code we use now on radio. Many of our characters are much later than Morse, and the code we use was referred to for a long time as "International Code" or "International Morse Code" to distinguish it from "Morse Code" which was used, until well into the twentieth century, on American land-line telegraphs. I don't know whether that code (with "C" as did-dit dit") was really the one that Morse used in his first message or not.
I always supposed that our "International Code" was European in origin, and understood that it was used in European land-line telegraphy, perhaps before Marconi started tinkering with long-range radio. Various machines were in widespread use in Europe for helping to decipher code on land-lines when telegraph here still mainly used "sounders" and audio transcription of "Morse Code". Does anyone know who cooked up our present radio code and when? The date 1887 for some international communication conference comes to my mind.

Bill,

Soundls like squelch clamping, which is to say that the combination of
a transmitter that is a touch too wide and a receiver that is very
narrow can block the audio. You seem to have figured out the problem.
The answer is to just back away from the microphone, and stop
shouting. The natural human instinct when the signal doesn't get
through is to talk louder and closer, but that is exactly the wrong
answer in this situation.

N3JLQ Wrote:

Date: 2 Aug 95 15:02:45 GMT
From: wejones@cbda9.apgea.army.mil (Bill Jones, n3jlq)
Subject: Strange problem with HTX202 and 1 repeater

Hi
Wanted to find out if anyone had any idea of what might be the cause
of
what I have been observing. I have an HTX202 that I use regularly on a
variety of local repeaters and on packet, simplex, etc, and have had
no
problems with it. We routinely vacation in a remote location where
there
are several repeaters that use pl tones (none of my local repeaters
use
pl tones). On previous trips I have used the HTX202 to call one
repeater
that uses a 100 HZ pl tone, but with one repeater, even though I could
receive it adequately, I could not bring it up with the 202, even
though I
could use it with 3 other radios (2 Alincos and a Yaesu). I assumed
that the
100 HZ tone in the 202 must be off freq or low in amplitude, but when
I
experimented using tone squelch using at least 4 different radios, it
worked
fine in all cases. I assumed then that I must just have a marginal
signal into
the repeater in question. This trip, however, I put up an improved
antenna, so

that I get full scale reception on this repeater. Now, I can bring up the
repeater with the 202, but no audio goes through the repeater, ie the repeater
just has a dead carrier when I am talking! Again, the repeater works fine
when I access it via one of my other radios, and I can still work other
repeaters and other radios in tone squelch mode fine using the 202. I seem
to have ruled out a problem with my 202, and I also seem to have ruled out
a problem with the repeater. I am still assuming that the problem involves
the 100 HZ pl tone, but can't understand why the repeater seemingly hears
the tone enough to bring up the repeater, but not enough to allow audio
through. The only thing I can think of is that the deviation may be a bit wide
on my HTX202 and the bandwidth on the repeater may be on the narrow side, and
all the other radios I experimented with are intermediate, ie I have seen
situations where a wide deviation transmitter sounds like a dead carrier
when received with a narrow band receiver. I have been told that the repeater
in question was using pl tones because it was having intermod problems, so it
seems possible that the repeater op narrowed down the bandwidth to avoid
interferrence. I have observed packet signals from the 202 on a scope, and the
audio does not seem to be over-modulated, but I don't have access to a
deviation meter.
Does any of this make any sense? I intend to eventually contact the
repeater op and see if he can monitor my signal, and intend to try to
determine if the deviation of the 202 is excessive by tuning through
the 202's signal with a narrow band receiver, but wanted to see if
anyone had any other ideas that I might investigate?

Thanks in advance, de N3JLQ wejones@cbda7.apgea.army.mil

Hy, Al and Mu ... again. It's a great story. Too bad it's not true. There's nothing in the Congressional Record to back it up. And it's just one of many stories -- none of which can be proven -- about the origins of "ham." We'll just have to live with it as it is.

<< I'm curious as to why the results took so long to publish. Seems that CQWW RTTY should be a lot easier to tally than the "big" contests. Yet we're
looking at nearly a year between contest and publication now. I'm not trying to be overly critical, just curious.>>

Doug -- I've printed out a copy of your question to run past the editor. I don't really know for sure, but I'd assume it depends on a combination of the following:
1) deadline for submission of logs
2) when the contest manager finishes scoring the logs and submits the results
3) available space in the magazine (August, for example, is our antenna issue, and we try to stick with antenna-related topics), and
4) a whole bunch of intangibles that I can't even begin to guess at.

If I learn anything different from Alan, I'll let you know.

Hi Mike --

I've used HTs on buses and trains for years without a problem. Generally, I use an earphone so as not to disturb anyone. And I have gotten my share of strange looks from people as I stare out the window and talk into my hand. But I've never had a problem with drivers (commercial airliners, of course, are a different story; FAA regulations absolutely prohibit the use of ham rigs, even just for listening, on commercial airliners.). I'm sure it has nothing to do with your age, since, as you say, you've only got a problem with one driver. One solution -- when you see you're going to have this driver, keep your rig turned off. You said you don't have her every day, so don't sweat it too much.

73,
Rich Moseson, NW2L

I have never had any problems. My friend even took his HT on the bus
with a "fishing-pole" whip, and no one paid any mind. I have been
bus-mobile and trolley-mobile. No problems. (Surprisingly, I have
been able to use the 145.23 repeater in Boston while underground on
the Green Line.)

>practical puroposes, my HT is a cell phone to lay-people. She would not
>permit a business man to use a cell phone to conduct his business!
There are no regulations that I know of on the MBTA that address radios
or cellphones on buses, though on the commuter rail, "radios may be played
with headsets only".

>talk to her. We'll see if the bus driver with the "itch" will even stop
>for me at all. In general, this driver has an unfriendly attitude
>towards anyone getting on the bus, does not wait at places she should

Unfortunately, this is not exclusive to your area. :(

Headsets with your HT is a *very* good idea that I use myself; I'm
hearing impaired so I need to do this anyway, especially in the subway.
That fishing pole antenna I brought up earlier is probably rude or even
dangerous to use on a moving, crowded vehicle.

The worst thing that's happened to us is that someone on the train
mistook us for DEA agents once.

: communications medium is to facilitate the transmission of thoughts
: and ideas from one person to another.

That IS the point, Gary! (Hurrah!)

: The more quickly and accurately
: it does that, the better. Almost any digital mode does that better
: than manual Morse.

Oh, darn. Gary slips back to missing the point again. "Faster and more accurately" is great (even "technologically advanced") if the person on the other end is capable of copying your mode. The point of this mini-sub-thread is just that. CW (Morse) is the second most used (popular) mode worldwide (by HF hams). It clearly has the advantage of "facilitating the transmission of thoughts and ideas from one person to another" better than any other mode (except SSB) currently in use.

The steam hammer proved its "superiority" over John Henry, but when was the last time you saw a steam hammer in someone's basement? Most hammering is still done with old John Henry hammers, unless you are building a railroad. Most of us don't even own nail-guns.

(several paragraphs of technical superiority statements about modern digital modes deleted)

Yes, Gary, modern digital modes ARE "technically superior". I already admitted that. Save your breath.

: I have faith that many of the newer amateurs will make the change, if they
: are shown the truth. Perhaps many of the old installed base of amateurs,
: set in their ways, will continue to fight the change, but in time they'll
: all be taking dirt naps, and the issue will be settled, as it was with SSB
: vs AM.

"Dirt naps". How touching. Yes, Morse will some day pass from the regulations. But not until other digital modes become as widely used as Morse is today (thus supplanting Morse). To abandon the Morse requirement now simply because digital modes are technically superior goes against your own stated purpose: "...to facilitate the transmission of thoughts and ideas from one person to another".

>that are possibly allowed -- it indicates which rights our government may
>not infringe on.

It lists some of the specially important rights our government may
not infringe, as well as some rights we've agreed to allow the government
to infringe. It by no means lists all rights. The Declaration of Independence
says our rights are endowed by our Creator, IE are natural rights, and are
inalienable, IE may neither be granted nor denied. Government can only
infringe rights, by use of force or threat of force, or by consensus,
though the latter is usually so rare as to be of only theoretical
consideration.

>>And there is no right (as enumerated by the constitution and
>>upheld by many levels of courts) to build a radio tower in your backyard.
>
>There is nothing enumerated in the Constitution that says I can wear a
>Hawaiian shirt either, but yet I'm doing so at this very moment! Amazing!

Yes, government only has the power to infringe rights, through use, or threat
of use, of force. It never has the power to grant rights, which are our
inalienable heritage, though it may attempt to grant special privileges
to some, again backed by force or threats of force as necessary.

Government is the embodiment of raw power, and as Mao said, "All power
flows from the barrel of a gun." Government lives or dies on the fear
engendered by its armed minions.

>to shatter/crack/explode.

Dr. Ufer, and the US Army Ordnance Dept, would be somewhat amazed to hear that, as would the writers of the National Electrical Code, who all consider the Ufer ground both safe and effective. This old wive's tale about exploding concrete still makes the rounds, despite the tens of thousands of sites protected by Ufer grounds across the country who have never experienced such an occurance, and despite the Army ammo bunkers constructed using Ufer grounding protection which have never suffered a concrete explosion from a lightning strike. A properly done Ufer installation is safe, effective, and won't cause concrete cracking or explosions any more than conventional driven rods will cause "dirt" explosions. What a Ufer ground *will* do is offer a lower impedance connection to Earth than most any other grounding method short of copper plating the Earth. (Of course you have to do a Ufer ground *right*, just as you have to do any other ground right in order to benefit from it. An improperly done Ufer ground, like any other improperly done ground, can cause all sorts of problems, even including (conceivably) a concrete explosion. Fortunately, you'd have to work real hard to screw up a Ufer ground installation.)

: Since when is the thrust of Amateur Radio to "improve the human condition"?

Sorry, it just seems to me that "enhancing international goodwill" (a
stated purpose of Amateur Radio) improves the human condition. Silly
me.

: Your argument is so specious and weak that you must resort to silly _ad
: hominem_ attacks on Gary to further your silly point.

What ad-hominem attack? I suggested that Gary is proccupied with
superior technology. That IS true, isn't it? If not, what the heck
has he been talking about?

: I mean, we communicate via computer over
: Usenet, why is that so much different than ham radio?

You really think it's the same??? That was a rhetorical question,
right?

: >You appear to be a technical wizard, Gary, and you obviously put more
: >stock in those purposes and goals of the Amateur Service which
: >correspond to your interests. Others (some of whom could even be

: Translation: Gary, you're a geek. [If it makes you feel any better, Gary, I
: am a geek too. -j]

: >described as "appliance operators") choose to hone their operating
: >skills and optimize their ability to communicate with as broad a
: >cross-section of hams as possible, thus fulfilling other purposes and
: >goals of the service.

: There's no problem with that, so long as these operators don't blindly cling
: to one form of communication, claiming it is the best for this or that or
: whatever, even when they've been proven wrong.

: There's nothing wrong with beeping along in CW (Even Gary did it!) at all.
: Just don't claim that it is the be-all-end-all-alpha-omega-savior-of-ham-
: radio.

I, for one, never have made that claim. (Read my claims...I won't kill
more electrons by repeating my last post here). By the way, my
calling Gary a "technical wizard" was purely complimentary. I admire
his knowledge and respect his numerous answers to technical questions
on Usenet. Whether he wears thick glasses, a pocket protector and
plaid pants doesn't concern me.

This is just plain inflammatory. CG *coastal* stations have never had CW. Only the *communications* stations carried CW, and your entry into such would not have been allowed due to security measures. There are only two COMMSTAs on the West Coast, compared to the dozens and dozens of coastal search/rescue stations (practically one in every major harbor or inlet).

I'm suprised they weren't monitoring 2182 kHz SSB.

I am think about getting into the Ham radio world. I was curious about start up costs. I know one can get carried away with such activities; however, I would like to get a reasonable good system. If someone could advise, in general, on cost of Tx/Rec, antenna, etc it would be appreciated. Also the identification of a responsible suplier in the Ottawa area would be help full.

I have contacted the government and they are sending me a package on requirements, etc.

The other thing that comes to mind is interference, not only for my equipment but also for the neighbours (ie: TV, radio, stereos, etc). Any insight would be appreciated.

Thanks for any help provided.

Hello Dennis. Well, let's see... many folks at this point would tell
you the cost depends on what you want to do with ham radio. Thats
because now-a-days hams are doing things that could only be dreamed
of just a few years ago.

Two of the things that hams do that you may want to get into are:
1.) Talk to people you don't know, all over the world.
2.) Talk to your friends and other local club members in a small
area, say a 30 mile radius.

The cost for number 1, using new equipment would range from about
$1,000 to $2,000 or so. Yes, it can be done MUCH cheaper, but you said a resonably good
system (subject to much interperatation). This
investment would buy you a 100 watt radio and wire antennas. There are
cheaper ways to go, and there are better ways to go (for bigger bucks)
but this would be a popular way to go.

The cost for talking to your friends locally (option 2) would be between
$200 and $600, depending on whether or not you live in a rural or
urban area. If you are in an urban area, you could get away with a
handheld radio. They are available starting at around $200 or so,
but they have a fairly short range. (I'll explain short in a minute).
If you live in a rural area, you would prolly want a radio that is
intended to be mounted in a vehicle. It is common to see them used
as base stations, but they are intended to be mobiles. These units
typically put out about 40 or 50 watts, compared to 5 watts for a
handheld unit, but they cost more.

For local communications, we use something called repeaters. They are
devices that receive your signal and re-transmit it over a range much
larger than your radio could cover by itself. To effectively use a

handheld, you should be within about 8 or 10 miles of one of these repeaters. For a mobile, you would want to be within about 20 miles. Some repeaters have larger coverage than others, and it is not uncommon to have reliable communication between two mobiles separated by 60 or 70 miles.

I hope this is the information you wanted, and good luck.

|> get 30 out?

On the one I measured, 1 watt in gave about 18 watts out, and 5 watts
in put out about 26.

|> It seems like a reasonable way to get around buying a mobile unit.

Yes, it is, but be sure to FEED it properly. None of these cigarette
lighter plugs. The amplifier needs about 5 amps, and that requires
direct connection to the battery to avoid alternator noise on the
transmitted signal.

ATLANTA BALLOONATICS

Balloon #4 Mission Update as of Aug 4, 1995 at 12:00Z

As you probably know, last Saturday's balloon experiment (carrying a GPS, packet radio, and ATV camera and transmitter) was postponed due to weather. It was rescheduled to Saturday August 5th.

Lots of bad weather is still passing through this area due to Hurricane Erin. Many damaging thunderstorms occurred throughout last night.

A preliminary go/no go decision will be made this afternoon, around lunch time. I'll try to get the word out here as quickly as possible.

Bill Brown, WB8ELK, is almost a "local" now, living in Huntsville AL and has told us he will be attending this launch.

If you do not have EMAIL access at home, you can get an update from our info line at (404) 936-3737. The info on there at the moment is very stale, and I probably will not update it until after 17:00Z. today.

Howdy.

I've been using my ht on public transportation for *Counts on fingers*
about 5 years or so now, and I've only had one or maybe two but no more
than that complaints. Even people sitting next to me never complain. Sh*t
fire, I even have people ask me what that is I'm using (Is that a
circular phone? Is that a CB? Is that a 2-meter radio?--yes, they really
have asked me that, even non-hams who were I guess acquainted with hams.)
It definitely passes the time; bus rides can be awful boring, especially
those long, cross-town ones.

ALL RIGHT! Way to go, Buddy10! You've passed the toughest hurdle, and
you found out that CW is FUN!!! ;-)

Keep your momentum going, and go on for the 13WPM soon. Then, I'd
encourage you to get on 40 meter CW and enjoy it...20 will be a breeze
after you log a few months of operating time. Hpe CU on 40. 73 es gl,

>I thank you all in advance for any help you can provide.

Buddy,

You will never be more motivated to go all the way to 20 WPM than you
are right now. On-the-air QSOs are a good idea if you have an HF rig.
If you don't, and can't, then SuperMorse will get you there, too.
I went from no license to Extra in less than one year, and I did it by
practicing with SuperMorse for 20 minutes twice a day, 6-7 days a week.
(You also have to want that E ticket so bad that you read people's
license plates in CW.) I also wired the speaker on my computer to
feed an audio cassette deck, and I recorded "readme" files, and
practiced at lunch. (I installed a switch to turn the computer's
speaker off while recording.) Listening to a tape twice ruins it,
because you start anticipating the words. Also try to avoid examining
the readme files too closely before recording them on tape, so you won't
have this problem. I jumped one class about every 3 or 4 months.

I'll admit I studied Morse code in 7th grade with a friend, out of
curiosity. Also, SuperMorse has to be calibrated for speed with
your computer.

As a philosophical point, I think it shouldn't be possible for
an individual to go from no license to extra in one year, like I
did. There should be an experience factor. But that's another topic.

Learning code is 90% desire. Good luck.

The next Central Illinois Balloon Association (CIBA) high-altitude balloon launch is scheduled for Saturday, August 5, 1995. Launch time for the helium filled 1200 gram balloon is set for approximately 9:00am CDT from Washington, Illinois. Estimated maximum altitude, 85,000 feet. The payload will be equipped with a GPS receiver and TNC operating on the APRS frequency of 145.790 mhz. The input frequency for the cross band repeater will be 146.490, with an output frequency of 446.025 mhz. The rain date is set for the following day, same time frame, same location.

A special event station is planned to operate one hour before launch until touchdown using the call N9MSG on 7.235 mhz.

2225. Military Airbase interference with TV chs 10 & 12 ??

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-04 00:00:00 UTC
From: kevin.jessup@mail.mei.com
Message-ID: <kevin.jessup.770.09BD5E17@mail.mei.com>
Source record: 241044
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc

I recently moved to a new home in the city of West Bend, WI, about
20 miles NNW of Milwaukee. I'm on a bit of a hill overlooking a portion
of the city and there is a small Air National Guard base at the local
airport about 3 miles to the East of us. Mostly helicopter traffic.

My wife just had to have the TV hooked up after the move so I just
put on some rabbit ears until we get cable. Every once in a while,
Milwaukee TV channels 10 and 12 are completely wiped out by strong
interference. Milwaukee TV channels 4, 6, 18, 24, 36 and 58 are not
affected.

This interference lasts for several minutes at a time and is NOT an
intermittent thing as with the "push-to-talk" switch on a microphone.
Recently, I heard what sounded like ground-to-air military communication
while the video was wiped out. The video interference usually looks like
gray-screen noise or massive horizontal sync problems. Usually, there is
no audio heard.

I'm a licensed radio amateur and an engineer but am not too famiar with
military radar or military RF nor have I ever lived this close to an airport.
Is the above problem typical? I am aware that military aircraft RF is
assigned frequency spectrum near the television channels in question
(216 to 220 MHz, I think). I really need to get a field strength meter and see
just how hard we are getting blasted. ;-)) Maybe I'll borrow that $25K IFR
spectrum analyzer from the lab here at work and take a look around
with that.

Please respond via Email. Thanks.

2228. GB2RS News 6th August 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-04 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <807588853snx@llondel.demon.co.uk>
Source record: 241047
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 6th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB will once again be holding a National Convention, this time at the Stafford Amateur Radio and Computer Show. The event takes place on the 19th and 20th of August at The County Showground, Stafford. In addition to a large trade show, the event will feature on-demand Morse tests, demonstrations, special interest groups and a bring and buy sale. There will be a large RSGB book and information stand, which will include an exhibition of photographs of historic radios and events, with the emphasis on Marconi. RSGB committees will also be present. Don't forget to take two passport-size photographs and the appropriate fee if you wish to take your Morse test at Stafford. An official show guide is published in the August RadCom.

The IEE will be staging an International Conference on 100 Years of Radio at Savoy Place in London between the 5th and 7th of September. One of the sessions, entitled 'Tuning and the Amateur', is chaired by RadCom 'Technical Topics' columnist Pat Hawker, G3VA. Lecturers at the conference will include Professor Martin Sweeting, G3YJO, from the University of Surrey UoSAT programme. For further details contact IEE's Conference Services on 0171 344 5477 as soon as possible.

And the RSGB International HF Convention will take place at Old Windsor in Berkshire on the 9th and 10th of September. The event will feature lectures and presentations from some of the world's top HF operators and DXers, including Roger Balister, G3KMA, who will give two presentations on the RSGB's Islands On The Air awards programme. There will also be a 48 hour contest station operating in the WAE phone contest and, for the first time, DXCC QSL card checking will be available at the convention Further details of the RSGB HF Convention and a synopsis of the lectures are published on pages 20 and 93 of the August RadCom. Alternatively, details of the lecture programme and a booking form can be obtained from Marcia Brimson at RSGB Headquarters on 01707 659015.

Two metre and 70 centimetre FM newsreaders are required urgently for GB2RS in the Cambridge - Mid-Anglia region. And a reserve newsreader is needed to cover for the GB2RS 80-metre broadcast by G5VO in the East Yorkshire area. If you would like to volunteer for either position, please contact Ian Kyle, GI8AYZ, as soon as possible. His telephone number is 01846 665034.

Yeovil Amateur Radio Club will be taking part in the Mid Summerset Festival for Young People at Huish Episcopi School being held from

Wednesday the 9th until Friday the 11th of August. The event has been organised to encourage children to develop an interest in various leisure time activities.

There is a proposal for a new 70 centimetre speech repeater to be located in north-west Glasgow. For further details contact the Amateur Radio department at RSGB Headquarters - telephone 01707 659015.

Now news of some special event stations:

GB0BRW is being operated by the Meirion Amateur Radio Society during Barmouth Regatta Week until today, Sunday, the 6th of August.

On Saturday the 5th and Sunday the 6th of August, GB2TSR will be on the air from the Torbay Steam Rally at Paignton on the HF and VHF bands.

The theme of this year's National Play Day - which takes place on Wednesday the 9th of August - is communication and Redborne School in Ampthill, Bedfordshire, will be the site of special event station GB0NPD. Anyone who would like to arrange skeds with the school should contact Jack Baytham, G3LNC, on 01582 862141.

GB0VIC will be operated by North Ferriby United Amateur Radio Society on Sunday the 13th of August at the Museum of Army Transport in Beverley, North Humberside.

GR0VLB will be on the air on Fridays, Saturdays and Sundays throughout August representing the Voluntary Life Brigade in Sunderland. The station needs additional operators, and if you can help, please contact Ian Batley, G0IID, on 0191 548 3301.

PA6AMS, PA6TER and PA6DAM will be operated by de radioclub Amstelland from the 10th until the 14th of August. The stations - active each day from 0800 to 2000UTC - will be on air to commemorate the arrival in Amsterdam of a colourful flotilla of tall ships and sailing boats.

Leicester Radio Society will be operating GB5VJ on Saturday the 19th and Sunday the 20th of August during its open days.

And a special event station in Queensland, Australia with the unusual callsign VI50Peace, will be active from Tuesday, the 1st of August until the end of October.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Libya, the 5AIA team went QRT on 25 July after making 35, 527 QSOs CW and SSB on all bands.

From St Pierre and Miquelon, K2RW will be QRV from the 15th to the 19th of August as FP5AA.

From Vietnam, 3W1AS has been reported QRV on 20 metres CW from Hanoi recently giving W3RGD as his QSL manager, 3W1AS hopes to soon be on 40m CW

Next the Rally News:

The RSGB Woburn Rally takes places at Woburn Abbey in Bedfordshire - close to junction 13 on the M1 - today, the 6th of August. There will be a large RSGB bookstall and information stand, and over 100 other exhibitors. Further details, including directions, are given on page 11 of the August RadCom.

The Derby and District Amateur Radio Society rally takes place next Sunday the 13th of August at Littleover Community School, Pastures Hill, Littleover, Derby. The venue is on the A5250 just north of the junction with the A38. Attractions include a monster junk sale. More information can be obtained from Martin Shardlow, G3SZJ on 01332 556875.

Also next Sunday, the 13th, Flight Refuelling Amateur Radio Society holds its hamfest at the Flight Refuelling Sports Ground, Merley, Wimborne, Dorset. Doors open at 10am and talk-in is on S22. The event will feature the usual mix of traders, bring and buy, craft exhibitors and a car boot sale. For further information contact Richard Hogan, G4VCQ, on 01202 691021.

Now a note for your diary: the Galashiels and District Amateur Radio Society will hold an open day and radio rally at the Focus Centre, Livingstone Place, Galashiels on Sunday the 27th of August. For further information contact John Campbell, GM0AMB, on 01835 822686.

Now for the HF contest news:

Today, the 6th of August, the second day of the Romanian YO DX contest takes place.

Also today, the 6th of August, the second Ropoco contest is taking place from 0700 to 0900 UTC on 80 metres CW. The rules are in the April RadCom.

On Saturday the 12th and Sunday the 13th of August the WAE DX contest takes place. Brief rules are on page 22 of the August Radcom.

And there are no RSGB VHF or UHF contests either this weekend or next weekend.

And now the solar factual data:

The period from the 24th to the 30th of July saw solar activity at very low levels and geomagnetic conditions at quiet levels. Sunspots were visible on only two days, the 26th and the 27th, while the rest of the days were spotless. The sunspot mean was 6. Solar flux levels remained very steady and averaged 70 units. No solar flare activity was reported. The electron fluence declined from high to moderate levels during the period. The X-Ray flux remained at the minimum value of A1.0 for the duration of the period. The 90 day solar flux average on the 30th was 75 units - no change from last week.

Geomagnetic conditions declined from active levels on the 24th, with an Ap index of 28 units, down to quiet levels for the remainder of the

period with an average of 9 units. The aa indices as supplied by the British Geological Survey for the period from the 18th to the 24th of July declined from unsettled to quiet levels and was as low as 9.0 nanoTeslas on the 21st. On the 24th, levels increased to sub-storm conditions with 43.7 nanoTeslas. The average for the period was 19.2 nanoTeslas, about K2. The mean sunspot number for July 1995 was 14.6 with a maximum of 30 on the 1st. The 23rd to the 25th and the 28th to the 30 saw sunspot numbers at zero. The smoothed sunspot number for January 1995 was 24.3.

I`ll repeat the figures: spots - 6, flux - 70, Ap index - 9, X-Ray flux-A1.0. July 1995 mean sunspot number - 14.6. January 1995 smoothed sunspot number - 24.3.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers as reported by Meudon for the period from the 21st to the 27th of July declined from 7.2MHz on the 23rd to 5.7MHz by the 25th with an average of 6.6MHz. The darkness hour lows were below what was expected and only averaged 2.7MHz. The daytime highs took place between 20.00 and 21.00 hours everyday with the darkness hour lows between 02.00 and 04.00 , except for the 26th. Short periods of spread F took place during the early hours of the 21st and the 27th. At Meudon, 5 hours on blanketing took place between 15.00 and 19.00 hours on the 25th.

And lastly the solar forecast:

This week the quiet side of the sun is expected to be rotating into view, solar activity is expected to be very low but several small B class solar flares could take place in the first half of the week. Solar flux levels are expected to decline to the low 70s. Geomagnetic activity is expected to be at very quiet levels.

And that`s the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Hotel and G7 Victor Golf series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Hotel series.

I painted my NMO mount, base-loaded 2M 5/8 and 10M mobile antennas, including whip, loading coil cove (the whole enchilada) flat black about six months ago. My Bird says the VSWR was unchanged as a result, and signal reports continue to confirm no problemo. I'd say go for it, but use reasonable judgement with the paint ingredients. Don't use metallic-based paint over your loading coils, for example. <grin>

>I'm no expert, so for waht it's worth, I'd think a charger for a 7V battery
>might not charge a 12V pack -- at all, or at least very slowly.

You are absolutely right. If you try charging the 12V battery with the
stock charger on the radio, it will charge it slowly until it gets to
a certain point where it will charge no more. The battery will never
get fully charge but it will hold a partial charge. That's why Steve
notices the quick drop in voltage. Basically you need a new and different
charger. I don't recall the manual specifically tell you this, but there
is a hint they give you the little lecture on using the cigerette lighter
adaptor.
>
>Along these lines, I had a couple Icom packs I thought were dead -- they
>wouldn't give eneough power to transmit even after a charge session in my Icom
>quick charger. I put them on a slow charge for about 48 hours each and they
>came back. Who knows?...
>
Hmm this is kinda odd. The quick charger should have been able to charge your
Icom packs. I'm not sure, but seeing how the charger worked fine during
a slow charge leads me to believe that there might be something wrong with
the battery or the charger. Many chargers measure the temperature to control
the charging process. This is particularly important during a quick charge.
During a slow or floating charge, the heat does not build up as much so
charging continues.

In article <3vtet3$4ek@apakabar.cc.columbia.edu> jbaltz@watsun.cc.columbia.edu (Jerry B Altzman) writes:

>I wonder: what legal status does the DoI hold? I mean, can one win in court
>claiming that one's right to life, liberty and the pursuit of happiness have
>been infringed?
>jbaltz@columbia.edu jbaltz@sci.ccny.cuny.edu KE3ML (HEPNET) NEVIS::jbaltz

We need to remember that CCRs are legal contracts of a special nature. It is difficult to claim that what I voluntarily signed (whether I really knew what I was signing) has somehow violated my right to Life, Liberty and the Pursuit of Happiness. There are some things that I may not relinquish, such as those little "releases" I agree to when I park may car in a garage that says I agree to not hold the owner liable for any damages of any kind. I can still sue and I may well win regardless of what I signed because I cannot sign away my right to legal redress.

OTOH, CCRs are a different matter. It's assumed that if I don't like them, I will go elsewhere to purchase land. *That's* why a claim about Life, Liberty and such generally fails. Reality is a different matter: almost every new development has very restrictive CCRs which, depending on the state, may renew themselves in perpetuity every n years. This means that I may have no practical way to avoid undesireable CCRs.

The arguments about property values are just so much smoke: in Boulder, CO, we had a very hotly contested antenna case. In it were claims that antennas "reduced property values". Yet, a matched-pairs analysis of *selling* prices (not appraised values) of homes next to ham antennas and those in the same area, but completely out of sight of the antennas, showed there was zero difference. At an insignificant level, homes next to antennas actually sold for slightly more per square foot than homes that were out of all sight of antennas, but it was not a statistically significant result.

"But," said the opposition, "antennas will affect 'curb appeal' and houses will stay on the market longer." Again, a matched-pairs analysis showed no such thing. Time on market had zero correlation with the presence or absence of antennas. Yet, the opposition won anyway because "everyone knows these things are a nuisance, dangerous and no one wants them", even though there wasn't a shred of evidence supporting anything but the last assertion.

Falling for logical arguments based on false premises is seductive. Politicians and pundits historically depend on it. Examine the underlying premise: "Everyone knows antennas reduce property values, so therefore..."

requires that we accept the founding premise. Examine the *premise*, not the argument, for validity. Do apparisers value property based on the CCRs? On the presence or absence of antennas? Do these appear *anywhere* in the guidlines they use? No. In general, people in the Boulder-Denver area were "blind" to antennas. This in a region renowned for it's vast, scenic vistas.

What about: "Antennas obstruct my view!" Ask yourself: "If antennas obstruct views, don't trees also?" Of course they do. "But trees are 'natural'..." Maybe (though not along the Front Range), yet the *nature* of the obstruction is not the issue: it's the obstruction itself.

Don't fall for the "Everyone likes..." trap because everyone *doesn't* necessarily and most have no opinion. And think, too: who pays the mortgage on the place, anyway? If my neighbors are so concerned about their esthetic sense (the color I paint my house, the car I buy, my fashion sense, the style of fence I put up, kind of flowers I plant, my Christmas decorations, you name it) they are free to buy my property and make it theirs. But until they pay the mortgage, it's damn-well *mine* and, within the guidelines of ensuring the health, safety and welfare of the community, I'll do as I please with it.

That's why when we wrote the contract on the home we're now buying in Oklahoma, I made very sure that there was nothing in it pertaining to antennas. I'll have no busybody Board of What We Think Is Tasteful overseeing and second-guessing my every move. Some people like that, but I don't. As for those of you in states and areas in which antennas have, over the years, become essentially forbidden: you have a long and difficult road ahead of you. Some buried their head in the sand and said "Well, it doesn't affect me, so why should I care?" Some fell for the specious premises and a few of us thought the restrictions were a good idea. And a few fought like mad, becoming pariahs because they weren't being "reasonable" and accomodating. To those who continue the struggle, keep at it and never get angry. Persistence will, in time, pay off.

I don't know whether or not you'll fry it. The specs don't even exist
with the amp.. *sigh*
>
>
>Are we talking about the same 5 year option that the radios get? You'd
>think that something as simple as an amp....

I did not opt for an extended warranty. Things like this SHOULDN'T go out
repeatedly, no? The standard warranty is one year, and I figured that
oughta be enough. I figure at least two things: either the equipment is
garbage, and needs regular repair, or I buy the extended warranty because
I know it'll be abused a lot (ok, let's call it "severe service").

Yes, I took my chances buying a Radio Shack product, but when it was working,
it worked VERY well.

I'm not going to comment about who is the most inflammatory here, but
the fellow has a point. Ham radio may not help you on the Oregon Coast
or many other places either. That is why I have installed a CB radio
in my pickup truck.
On a recent trip down the Santiam Pass in the Cascade Mts. I encountered
an overturned Ford Exploder. Several drivers had stopped and were pulling
children out of the upside down vehicle. I pulled over and called for
assistance on the 146.86 repeater which has wide coverage. A helpful ham
or two immediately responded and dialed the 911 autopatch for me which
I probably could have done myself. It rang and rang, followed by a
recorded message describing the unconnected service. The 911 people had
again changed their 7 digit number without informing the hams! The
guys on the repeater mentioned this had happened before. The 222 band
repeater I use in PDX has a 7 digit number for 911 due to the patch
inability to handle a 3 digit call. Other units handle this differently
I suppose. Maybe I should try it out and cause unnecessary traffic for
911 here. I'd have to try it regularly it seems.
All the occupants in the vehicle were okay and the police, fire, and
rescue trucks arrived promptly, thanks to all the truckers with CB's.
I don't think this area or many others out here have cell phone coverage.
I certainly can't fault the amateurs who tried to help me or the repeater
operators. All were trying their best and doing well. But the system
fails sometimes and other more commonly available options exist.

>regard for how it might impact people in the present.

I took the last line (about "obsessed") as being an _ad hominem_ attack on
Gary.

>: I mean, we communicate via computer over
>: Usenet, why is that so much different than ham radio?
>You really think it's the same??? That was a rhetorical question,
>right?

No, I mean, we comminicate via computer over Usenet, is it so different when
we communicate via computer over ham radio? Besides, we can communicate well
in real-time via computer over radio, almost as well as voice (I do it quite

frequently, actually.), but not as well as fast-scan ATV with voice, and certainly not as well as in person.

One caveat about the CallBook census figures, they might be
"wrong" for some foreign countries. The last time I looked
(several years ago) the number of JA Amateurs was listed as
about 23,000 in the Callbook census list. I'm not sure how they
came up with this figure, unless they counted only high power
HF licensees or something like that.

SB PROP @ ARL $ARLP033
ARLP033 Propagation de KT7H

ZCZC AP02
QST de W1AW
Propagation Forecast Bulletin 33 ARLP033
From Tad Cook, KT7H
Seattle, WA August 4, 1995
To all radio amateurs

SB PROP ARL ARLP033
ARLP033 Propagation de KT7H

Solar activity is in the doldrums. We are close to the bottom of the current sunspot cycle, and there is very little activity. Geomagnetic activity is also very low, which is normally good news, but the solar flux is so low that propagation at higher frequencies is suppressed.

There were no sunspots last Friday, Saturday and Sunday, July 28, 29 and 30. Solar flux was below the 90 day average of 75 every day last week, and the average was four points below the average for the previous 90 days.

Solar flux should rise slightly to a very low peak around 80 between August 8 and 12, then gradually slide back to current levels from August 18 through the end of the month. Recurring coronal holes should cause an upset around August 12 through 14.

Sunspot Numbers for July 27 through August 2 were 12, 0, 0, 0, 15, 20 and 24, with a mean of 10.1. 10.7 cm flux was 70.4, 70.4, 69.8, 69.7, 70.8, 72.6 and 73.5, with a mean of 71.0.

Path projections for this week are to Cyprus from San Francisco, Dallas and New York City.

From San Francisco 30 meters should open from 0230 to 0330z and 20 meters from 0330 to 0630. 17 meters may open some days from 1800 to 2200.

From Dallas 80 meters should open from 0130 to 0245z, 40 meters from 0100 to 0330 and 30 meters from 0000 to 0430. 20 meters should be good from 0330 to 0530. On a few days 17 meters may open from 1600 to 2230.

From New York 80 meters should be good from 0000 to 0300z, 40 meters
from 2300 to 0330 and 30 meters from 2130 to 0500. 20 meters should
be open from 1700 to 0030, with the best period from 2100 to 2330.
On some days there may be a 17 meter opening from 1830 to 2100.

2250. This Week in Amateur Radio #123 (for air through 8/11/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-04 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <ZrPiKgc.sanderman@delphi.com>
Source record: 241069

Here is a summary of news items covered on edition #123 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 11-Aug:

-

1. New Trans-Pacific Distance Record Established on Two Meters
2. ARRL Staff Member Honored for Contributions to VHF
3. Amateur Radio Gets Boost from CNN Coverage of Special Olympics
4. Errors on AMSAT Election Ballots Cause Confusion
5. New World Wide Web Page for Amateur TV Operations
6. Damage to Shuttle Booster O-rings Delays Endeavor Launch
7. "The RAIN Dial-up" from Chicago
8. Three Los Angeles-area Amateurs Killed in Shooting Incident
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. Nicaraguan Contest Scheduled for This Sunday
11. Weekly Propagation Forecast with George Bowen, N2LQS
12. Upcoming Special Event Stations
13. "Amateur Radio Newsline" - Edition #938 from Los Angeles

-

Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community. Funding to access "Newsline" was provided by a grant from the Stoddard family and users of the KF9MP repeater system in North Webster, Indiana.

-

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM or SANDERMAN@DELPHI.COM.

>that if your repeater has auto patch then anyone with an emergency should
>be able to dial 911 or *911 to contact the 911 Emergency services and #
>to end the call.

My repeaters cover 6 Counties in Metro Atlanta.
It takes over 50 individual speed dials to allow users to contact the various Sheriffs, County Police, City Police, State Patrol and National Park service Departments that serve our communities. We cover 3 area codes as well!

In your " mandate " , who do you suggest we call when 911 is entered? Any choice could be as far as 60 miles from the affected area. We don't even dial "911" in our home county because the highly intelligent 911 operators insist on sending police cars to the address of the repeater (even though they are given the correct location of the problem)! We dial the individual 10 digit numbers for the 911 equivalent for each area.

So you see, the idea is good, I agree with you. But repeaters covering large Metro areas do have different requirements than repeaters in areas like yours.

By the way, the Repeater owners have pretty much standardized on ten autodial codes that work on most repeaters. 0*0 will almost always get you the Atlanta PD, 0*3, the Cobb County Police, etc..

2252. ATV and Packet on Balloon 8/4/95

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-04 00:00:00 UTC
From: rwf@mindspring.com
Message-ID: <rwf.253.003460C7@mindspring.com>
Source record: 241071

Yes!! It looks like a GO

Atlanta Balloon Update as of 3 August 1995:

All equipment for all packages on hand.
Payloads modules tested. Final integration complete.
Launching from Crossroads, GA. (NW of Dallas)

ATLANTA BALLOONATICS

Balloon #4 Mission Status

DATE/TIME
: Saturday August 4th or Sunday August 5th
: Release 0930EDT (1330Z) 0930EDT (1330Z)
: Weather conditions will control exact time of release

RELEASE SITE:

: Crossroads Elementary School, North of Dallas, GA
WB8ELK (Bill Brown) will be in attendance
: Coordinates 3400.48N 08446.12W

: Payload weight : 2.27kg (5-pounds)
: Balloon : TOTEX TA-1200
: Helium : 180 cu ft.
: Ascent rate : 750 fpm
: Max altitude : 110,000ft
: Max radio range: 640km (400sm)

FREQUENCIES
AND MODES

: Packet Radio Downlink 441.0 MHz 2W
: Retransmitted from ground into APRS net on
145.79 MHz and on 10.151 MHz LSB
: Standard AX.25 1200BPS AFSK FM
: Sending APRS-compatible NMEA-183 GPS navigation data
: No Open digipeating. No receiver. Don't try.

: Altitude & Temperature telemetry on:
146.575 MHz , 28.322 MHz , & 438.5 MHz (wide band TV
audio)

: B&W ATV camera with 1 watt AM transmitter on 434.0 MHz

: All antennas vertically polarized

EXPERIMENTS : More experiments in BASIC stamp control of balloon payloads.
Basic Stamp controlled servo/mirror for multiple camera views.
1 12 bit altimeter and 2 8 bit temperature sensors (inside and outside)
data will be sent as CW on the 10 and 2 meter frequencies

For more details about this project, as well as telemetry decoding charts-
see the WWW addreess listed below

: I have purchased a 20 meter CW practice receiver for W1AW code
: practice(cost about $50.00). It does not come with an antenna. Could i
: use a piece of #12 copper thhn wire as an antenna ? How long should the
: wire be ?

Just make it as long as necessary. :-) A few feet will be just fine
in most cases. The length of the wire isn't really critical for a
receiver - it become much more relevent for a transmitter. Just be
warned that more is not necessarily better. If you're using the
receiver I think you are, it's somewhat prone to front-end overload,
which essentially means that the receiver can become swamped by
strong signals, and its apparent sensitivity will decrease.

It's an excellent method of providing RS with money, after they
fix your HT.

There are no, none, zip, zero, nada mods for the HTX-202/404. They're
designed that way for a very good reason - performance. If you want
a GameBoy radio that will receive DC to daylight, you'll have to look
elsewhere. :-)

2256. Perseid GriDXpedition to EM49 or EM47

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-04 00:00:00 UTC
From: phydeaux@inlink.com
Message-ID: <3vrq24$ak0@news1.inlink.com>
Source record: 241124

Friday, Saturday and Sunday (Aug 11, 12, 13) I will be in either EM49 or EM47 for the duration of the weekend looking for meteor scatter contacts. I will be running 150w on 2m into an 18-element beam. I will be experimenting with some "close" scatter contacts (<500 miles) by tiliting the antenna upward. If you're interested in making a sched, send e-mail or phone me. Spread the word!

BTW, my new call just showed up in the daily mods to the FCC database... I believe it's legal to use it as long as it's there. Anyone know for sure?

: bus-mobile and trolley-mobile. No problems. (Surprisingly, I have
: been able to use the 145.23 repeater in Boston while underground on
: the Green Line.)

Since when does the Green Line go under ground? I was last
in Boston in 1983 (okay, a long time ago) and the Green Line
was the trolley while the rest of the lines were the subways?
Gotta love Boston.

: I have one - or should I say "the shop" has it right now. First of all,
: figure 2 watts in = 20 watts out (at 13.8v); .3 watts in = about 5 watts
: out.

OK, this gets a bit weird. If I take an HTX-202, I can choose between 1
watt out or around 6-7 watts out. Am I gonna fry it with 7 watts? Seems
kind of dumb to get an amp that only lets me put in 1 watt and gives me
10 when I can get 7 without it.

: Why is it in the shop? I've owned it for three months and have hardly
: used it, but recently I discovered that, when the unit is on, receive
: capability in the 2-meter band is way, way down! OUTSIDE the 2-m band it
: still receives fine, so maybe the receive helical filter went TU. At
: least it's under warranty....

Are we talking about the same 5 year option that the radios get? You'd
think that something as simple as an amp....

JJ>Can anyone point me to a source (old or new) that would list
JJ>total number of hamradio operators by state and/or by country?
JJ>

My copy of North American CallBook (1991 - kinda old) has two
listings (make that three listings). On Page 22A is a census
of US licensees by State and license class. On Page 23A is a
listing of worldwide licensees by prefix (country) and on
Pages 24A-25A another census of US licensees by State and
the first 3 digits of their ZIP.

I have written a DOS program that does what you need and more.
It's called INTERMOD and I can supply more information if
you e-mail your request to me at address above.

The program inputs data from the keyboard and saves the database to a
disk file. The output can be directed to screen, disk file, or printer,
or all three at once. It handles up to 1000 transmitters and 1000 receivers
and only prints out the hits that correlate against the receivers in the
database within a user-specified bandwidth. It calculates 2-transmitter and
3-transmitter combinations and calculates harmonics. Maximum default order
is 9th, but you can specify higher orders if you want to wait that long...
depends on your CPU speed and how old you are already :-)

Been there, done that. I've also done the standard "hidey hole"
antennas. Slinky antennas work. Other options include a folded dipole
inside a PVC pipe, base-loaded verticals disguised as flagpoles attached
to the window ledge, and the "invisible" dipole made out of magnet wire.
I operated that way for one whole semester at NMSU. I've even done the
"load up the window screen and desk" thing. It's not efficient, but it
is better than nothing.

JN>I already phoned the ARRL and the FCC and came up empty handed.

I would imagine that the FFC listing of call signs would be able to be manipulated to extract just such info. At least for the "current" call signs issued. You can down load the entire listing from the FCC, but I have heard it is a very very large file and could take a few hours to do so.

I also imagine that you could get the latest copy of the QRZ! cd-rom and see if you could not the data you wanted from that as well.

2269. WW2END USS Missouri Special Event Station

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-05 00:00:00 UTC
From: treit@seanet.com
Message-ID: <treit.287.0014A0A6@seanet.com>
Source record: 240987

This Labor Day weekend, as many of you know, a multi-club once in a lifetime special operating event will be held at the Bremerton Naval Shipyard onboard the USS Missouri, in Nortwest Washington.

We will be operating for 4 days, around the clock, with stations on HF SSB, HF CW, Packet, Sattelite, VHF/UHF and more. We will be commemorating the signing of the Japanese surrender onboard the Missouri 50 years ago, as well as celebrating the continuing peace between the nations who had fought against one another in that tragic war.

This is a truly unique opportunity for amateur radio operators worldwide to participate in the celebration, and to be a part of history.

A WWW page dedicated to the project is now active at:

http://www.excell.com/ww2end.html

Check it out!

There have been a number of inquiries regarding our use of the callsign WW2END. At the beginning of the year, when the entire event was being planned, the FCC said that there would be no problem receiving that callsign and since then we have been promoting the event heavily with "WW2END" as out centerpiece. It was quite disturbing, then, when the FCC lawyers called a mere month or so before operations to say "Sorry, we lied." Whether or not we shall get the call is still up in the air, but we are working on it. At any rate, we shall be on the air regardless and it will be FUN!

I encourage EVERYONE out there to take the time to contact this station. A special QSL card and certificate will be available to all amateurs contacting the station. Frequencies are posted on the WWW page, and should be in the Sept. QST as well. Be on the lookout for the USS Missouri and WW2END!

Strong Suggestion- yes. Requirement- heck no!

Although (thank God) we have few problems in general with people abusing the
repeaters in our area but we had to pull the 911 support due to abuse.

After a couple of unidentified calls, with nothing but dead air and irritated
E911 operators, we decided *not* to have our free phone line pulled by its
sponsor because of followup calls from the dispatchers.

So now the "code" to speedial the E911 switchboard is not the standard 911 or
*911, and is only told to responsible licensed individuals- and is *not* given
out on the air for any imbicule to play with.

It takes several people, and a lot of time to make a good system work- but only
one schmuck and a few seconds to really screw it up.

I think it'd be OK to use an HT on buses here in RIPTA territory. On any day you'll see six or seven walkmans, and a cellphone or three. Of course I thought RIPTA had the market cornered on idiot drivers but I was wrong.

The system I use DXBase supports laser printers using Avery 5161
laser labels. DXBase works great on my NEC Silentwriter 95F which
emulates an HP using PCL5. I have a request in to the authors of
DXBase to modify the program to allow a laser print to start printing
other than the top of the page in order to print single lables with
out wasting a sheet of labels. The rest of the system is very good
and quick and is used by a lot of Dxers.

2275. Auto patch and 911

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-05 00:00:00 UTC
From: Tim Wright <twright@eskimo.com>
Message-ID: <Pine.SUN.3.91.950804202326.21815B-100000@eskimo.com>
Source record: 240993

I am an E-911 dispatcher and a ham with the following concern.
A lot of repeaters in the US have an auto patch but not patched repeaters
allow direct access to dial 911 in an emergency.

In my area of East Central Kentucky, we have 3 repeaters I feel are local
ana of these 3, only 2 have auto patch and only 1 is open to dial 911 in
an emergency. The other repeater owner requires that you belong to his click
and pay for total access to the repeater. Its an open repeater and is a
great repeater in its coverage area.

I feel very strongly on this that it should be a mandated requirement
that if your repeater has auto patch then anyone with an emergency should
be able to dial 911 or *911 to contact the 911 Emergency services and #
to end the call.

What can you do as repeater owners to help in this matter. The next time
I drive through your area and need to report a wreck, I hope your not
involved and your repeater has a open 911 call access.

I agree with Bruce. Have had my SRA about three years with no trouble. Rcvr side is quite prone to intermod. An external ant on the rcvr vastly improves signals both wanted and unwanted. I broke the rcvr antenna (rubber duck) plug, cost $25 to replace. Would like to see rcvr ant connector be a BNC but probably not enough room.

>you'd have to work real hard to screw up a Ufer ground installation.)

One thing that I would suggest, if the concrete hasn't been poured yet,
is to *weld* all the crosspoints rather than tie-wire them together.
There is one particular repeater building that has always had an
excessive amount of intermod, and while I am not 100% sure of the facts,
I was told that the builder cheated a bit and did not weld teh rebar in
the walls and floor. Apparently the crosspoints that are rusty are
acting as diodes...

For: Emergency Management Agencies via Amateur Radio
Info: Communications Volunteers in Government Service
Info: Amateurs U.S. (@usa:Information), ACS, CAP, MARS, RACES
By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

Bulletin 390 - For Release 8/7/95
MGT - Volunteers- Images & Issues 3/7

Another image in the mind of many is that the only people in an emergency communications reserve are radio Amateurs who just operate radios and pass messages. FACT: Today's professional communications volunteer is NOT calling a distant station with, "This is message number eight-seven, are you ready to copy?" If that's your vision of the professional volunteer in communica-tions in l995, please erase it NOW! [Explanation to follow.]

In some parts of the nation there is a GOVERNMENT agency that is responsible as the primary responder in any emergency. Usually this is a direct result of a state legislative act (law). Where that situation exists, the government agency wants people who are committed to a local government as PART of that SPECIFIC government. Of necessity that means that the communications volunteer of the Nineties are those that are recruited INTO the government (albeit unpaid) to become a part of the agency. Where a state has a different situation, then other policies may prevail.

As the person responsible for the coordination and development of the California Auxiliary Communications Service, the coordinator (Stan Harter) spends a great deal of time talking with managers in government from around the country about how to deal with communications volunteers. An attitude that he sometimes hears is expressed this way: "If I ever need communications, it's so much easier just to call in an outside group."

[There are agencies that do so.] It certainly does sound good, but be aware of the pitfalls. Here is Harters answer based on 40 years experience in Hawaii, California and other western states:
(Continued, next week)

>Is there a FAQ for this newsgroup? I've been reading for about a month
>and never came across a FAQ. Maybe someone will volunteer to create one?
>Jerry
>KE6UUX

There was an FAQ, but it is now moribound. For it to continue, someone needs to take it over and probably do a substantial rewrite, but considering the degree of apathy on this newsgroup (and the fact that many just want to fight and argue and not make constructive contributions to the hobby), I wouldn't hold my breath (I welcome the opportunity to be proven wrong, though).

Here is the relevant entry from my Amateur Radio Elmers Resource Directory:

++

Joe Nobody N0CALL

nobody@nowhere.nodomain

rec.radio.amateur.misc Frequently Asked Questions (FAQ)

Available from:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html
ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to

use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

Also the HS-60 headset gets 5 volts of power from the receiver antenna jack.
The receiver antenna jack has 3 connections. Tip is RX antenna, Ring is 5 volts
@ 3 mA and Sleeve is Ground. You can find a BNC to 3.5 mm or 1/8" mono male plug
in some stores, works fine as the ground does not actually need to be instalted.
Shorting the 5 volts to ground does not hurt anything either.

Have you ever wondered about having two or more cellular phones
on one cellular number?? It is possible. You can get special
programming software, and hardware, from me, to do this yourself. If you
would rather not do the programming yourself, I can do it for you. I can
program up to the very latest phones, as I have always been able to do.
Programming post 9340 phones is not a new thing for me. I have been
supplying all programming software and the Loader chips for post 9340
programming for a quite some time. I support all of my software with
technical support over a voice line or over e-mail which ever you prefer.
Also my software is completely supported by printed instructions and
step-by-step programming information, unlike many other sources of such
software. If you are interested in more info on this subject, e-mail me
at BYDN38B@PRODIGY.COM I will then give you a voice number to talk to me
personally to answer any questions you may have.

-MacGuyver.

> not jumping me in rank, but am I eligible to take the written part and
> take the 13wpm code test later to get priviledges?)

Many decisions like these are left up to the VE team, but usually you can take any written exam you want (in order from 2 thru 4B). Remember, the 365 days is for _each_ element. In other words, if you if you pass 5 WPM 13 months after element 2 but 11 months after element 3A, you are still just a no-code tech.

Congratulations and good luck. You'll be glad you stuck to it, and when you get your Extra, pay back the ham community by becoming a VE.

> make sure to be prepared either with a VHF marine radio or a
> cheap CB radio. Don't waste your time trying to get help
> with Morse code :-).

The Coast Guard officially stopped all CW operations several months ago.
The official reason was VHF FM, HF digital, and satcom have replaced CW.
I'm sure the cost of training new radio guy/gals was also a key factor.

In a related item, USAF MARS just announced it will cease all CW
operations on October 1st. The reason is more information can be passed
on the limited bandwidth using packet, pactor, slow-scan, etc...

Sad to see it go, but time moves on, and these services are not hobbies.
They must justify the tax dollars and spectrum they use.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 AUGUST AND FORECAST FOR 06 AUGUST - 08 AUGUST

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 04 Aug
Daily Proton Fluence >1 MeV: 4.4E+04
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.3E+06 (normal)
X-ray background: A2.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Aug 07 Aug 08 Aug
Activity very low very low very low
Fadeouts none expected none expected none expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Aug: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 04 Aug
Learmonth 6 2222 2211
Fredericksburg 5 6
Planetary 6 6

Observed Kp for 04 Aug: 1220 1223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Aug 5 quiet
07 Aug 5 quiet
08 Aug 5 quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

05 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST

Properly is the key. I wouldn't want to pump a gazillion amps into the rebar net and, possibly, up into the steel structure of a building. I have put up metal buildings with the structure and rebar electrically tied together, but it all terminated into a healthy counterpose.

Anybody been on the Avon Park range lately? I wonder if that fire station is still standing.

>You might just be pleasantly surprised.

I live across town from Harold (in Gilbert, AZ) and I have a similar situation. There are CC&R's prohibiting the normal things but there was no enforcement written into them, no board or homeowner's association...only a civil suit and the loser pays all costs. There were several TV antennas in the neighborhood already so I put up my vertical on the roof. No one said anything. I now have three antennas up and a 8.5 ft TVRO dish. No one has said anything in 6 years so I figure I'm safe. At one time the mayor lived across the street, the town manager lived next door, and a couple town councilmen lived in the neighborhood, too.

No one pays any attention to the CC&R's any more and, amazingly enough, the neighborhood has not gone to hell in a handbasket. Property values have steadily risen (could it be the LACK of CC&R enforcement? Perish the thought!) and houses put on the market sell faster than average. I don't know how the neighbors would feel about a nice tower & beam, but I don't have the money or real desire to have one anyway.

On the other hand, most of the newer ticky-tacky developments in the area have the standard bull(chicken-?)shit CC&R's and gestapo HA's to go with them. I guess we just lucked out.

2297. Atlanta Balloon Flight Synopsis

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-06 00:00:00 UTC
From: rwf@mindspring.com
Message-ID: <rwf.259.00811C9E@mindspring.com>
Source record: 240939

On August 5th, 1995, after a 1 hour weather hold,our balloon was launched
from Crossroads Elementary School near Dallas, GA. Bill Brown (WB8ELK) and
his girlfriend were there to lend a hand.

We even had an unplanned experiment: "Ants in Space" (with apologies to Gerry Creager's
cows). Someone had set the
GPS payload down on an anthill, and we were going to have the first amateur
"Antronauts". :(

At liftoff, something caused the bottom payload (the GPS/TNC/TEKK Radio) to separate from
the flight train.
This caused the balloon to ascend with only the ATV payload, Radar reflector,
parachute, and 10 and 2 meter beacons.

Those payloads worked flawlessly, and the fox hunters DF'ed the balloon with the aid of
APRS and manual beam
headings, handi finders and Doppler units. A local fellow has a Company
(Directional Systems) that makes a NICE Doppler unit.

After a two hour flight, the package landed on a farm, in a 100 ft high Sweet Gum tree. The
farmer tried to shoot down the
package for us with a rifle, but couldn't get all the strings. His son fi
nally felled the tree and we cut it up into logs and stacked it for him. The
payloads, including the video with servo controlled moving mirror all worked
while the balloon was in the tree and during the tree felling.

By the way, the first person to the balloon was WB8ELK. I know telemetry was received in
Huntsville by KE4EER.
Any one else receive our beacons?

We'll post some images on the web site soon. And I will post the HST file of the DFing
activities as well.

We have 1 balloon and 1 tank of helium left, so we'll fly it again soon (ALL of it, I hope)

For more details about this project, as well as telemetry decoding charts-

Paul,I never claimed that this poll was scientific, and keeping the results hidden will not make the poll suddenly scientific. No poll can be considered scientific,in which the participants are self-selected. Many magazines, newspapers, and TV news programs ask people to participate in self-selecting "therefore nonscientific" write-in and call-in polls. CNN, Redbook,Comsumer Reports,and heck even QST,have asked people to participate in such nonscientific surveys.

Come to think of it Paul,the FCC itself has a comment period before they make a rules change. This happened just recently with W5YI's proposal to ban HF one-way broadcasts. One reason the FCC does this,is to get some feel of how their policy change will be received before it's implemented.Infact,the ARRL just recently asked its membership to flood the FCC with comments opposing W5YI"s petition. Would those comments "scientifically" reflect the overall view of the ham community??? Yet the FCC will take those comments into accounts when setting policy on this issue.

Tell me Paul,has the ARRL, CQ mag.,73 mag., or any ham club for that matter, ever committed the money necessary to conducted a "scientific poll" of the ham community on a ham related issue? Paul,The lesson here is, that important decisions are made all the time by policy makers, without the help of a scientific poll. Often, all they have to go on, are their own gut level feelings to support their decisions.

Each person can decide for him/her self how much value they want place on the results of the Ham Poll. Rest assured Paul,the ham community will have no "scientific polls" to consider in determining where hams stands on a given issue. As usual, the only data available will be the comments one picks up at hamfests and club meetings. Just as valuable,in my opinion, and an additional piece of data to consider, would be the results of the Ham Poll. After all, if its good enough for the ARRL and the FCC to gather information in that manner, it's good enough for me! At least in our poll you'll find out how age, and license class, affected the poll results.
73's Ray

FWIW... I've been using my TR-7950 on a cig. plug for years when I do
communications in a SAG wagon on bike rides and running events. I've used
it in a number of different vehicles including an 89 Aerostar, 76 Volvo,
'8? Transport, 84 Dodge Colt, etc. and never had alternator noise on receive
or the transmitted signal.

The radio is a 45 watt model and it draws 9.5 amps. No, it probably isn't
the best installation, but it is temporary and handy. We do what we can.

73,
Ken

You could get the unzip and zip programs from the Info-ZIP group.
They are somewhat slower than pkzip and pkunzip, but they are free,
while pkzip and pkunzip are not.

Unzip and zip are available for anonymous FTP from oak.oakland.edu
in the /SimTel/msdos/zip directory (I think).

I don't think the paint would have any effect. However, if your going to have to use that long a run of coax, by all means use the lowest loss coax you can find. Unfortunately, that equates to the most expensive.

This usually means that the files were zip'd with a later version of
PKZIP than the version of PKUNZIP you are attempting to use. Get a
more current version of these utilities.

I think you are trying to use an older version of PKUNZIP
You need pkz204g.exe. This is a self extracting version 204g

older version of pkunzip will not unzip a file that was zipped up the
newer version

ftp://oak.oakland.edu and get the newer version or just about any ftp

2306. Huntsville Alabama Hamfest

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-06 00:00:00 UTC
From: femens@iquest.com
Message-ID: <40194q$72t@polo.iquest.com>
Source record: 241001

You are invited to the friendliest family hamfest in the Southeast at Huntsville, Alabama on August 19-20.

All activities will take place inside the air-conditioned Von Braun Civic Center. Activities start at 9:00 AM on both Saturday and Sunday.

Browse a Dealer/Manufacturer show with over 70 exhibitors and look for bargains in the 20,000 square foot indoor flea market. (Sorry, all tables are booked).

License Exams begin at 9:15 sharp on Saturday morning. Walk-ins are welcome, but bring identification, copy of your license and any CSCEs.

Enjoy a full program of Amateur Radio and computer related forums both days.

Attend either the Hamfest Banquet, where the recipient of the Young Ham of the Year Award will be presented, or the DX Banquet on Saturday night.

Our expert talk-in crew will be on 146.34/.94 all day Friday through Sunday.

For more information, check the WWW at "http://iquest.com/~femens/hfest.htm", call (205) 536-3904 or send email to either femens@iquest.com or dtunstil@iquest.com.

Our emphasis is on making sure our guests enjoy the hamfest.

Frank Emens, Huntsville Alabama "femens@iquest.com"

2310. Re: CCR restrictions (was Re: Local Antenna Restrictions)

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-06 00:00:00 UTC
From: Harold Lines <hlines@indirect.com>
Message-ID: <401quf$554@globe.indirect.com>
Source record: 241005
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.antenna

There's another thing to consider when you talk about CCRs, and that's the enforcement. When I bought my house here in Glendale, AZ (adjacent to Phoenix, 10 years ago), I had to sign a paper that kept me from installing outside antennas. The paper talked about a governing board in my development that would meet periodically and regulate what went on in the area. Well, of course, once the developers had sold all the houses, they took the money and ran away, and our development never did come up with a governing board. After I lived there for a couple of years, I put up an 80 meter dipole, and no one said anything. I put up a 2 meter Isopole a year later, and apart from one neighbor's question ("What is that thing, anyway?"), no one said anything. I could probably put up a tower and a tribander, if I wanted to, but I'm getting ready to move, so it's not worth the money. I'll move out into an area regulated by the County, where there are probably no CCRs (I hope).

Of course, there's no way of telling how the CCRs will be enforced when you buy your house, but you might just luck into a situation like mine. Try putting up a couple of antennas and see if anyone says something. You might just be pleasantly surprised.

Not sure, but I would guess the late 50s or very early 60s. My uncle used a
HQ-129x during the late 60s, as far back as I can recall. A durable receiver,
but had a hard time staying on frequency.

2315. New mods for Yeasu FT-530?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-06 00:00:00 UTC
From: gclyde@well.sf.ca.us
Message-ID: <402evp$nr2@nkosi.well.com>
Source record: 241010

I have a new Yeasu FT-530, and am following the factory instructions for adding RX/TX frequencies published at oak.oakland. What I find is a slightly differnt pattern of jumpers, and a green jumper wire at a location that MIGHT be jumper 13 (which is supposed to be de-soldered). Since the orgiginal mod instructions date from 93-94, I wonder if there have been revisions in the hardware, and if anyone can provide updated mod instructions. Kindly reply here or by email -- gclyde@well.com. Thanks.

Mine doesn't have the green wire, but I heard it was added specifically
to make easier the mod you're seeking. If it were on mine, based on
what I've heard I'd go ahead and clip it. Since we're talking about
yours, you might want confirmation first.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~ ??
: that if your repeater has auto patch then anyone with an emergency should
: be able to dial 911 or *911 to contact the 911 Emergency services and #
: to end the call.

: What can you do as repeater owners to help in this matter. The next time

<<<<< Get the facts first >>>>>

: I drive through your area and need to report a wreck, I hope your not
: involved and your repeater has a open 911 call access.
: Tim Wright KD4OVM
. . . . . .
. . . . . .

MANDATED REQUIREMENT ? Seemd like a good idea, but let's not go overboard.

An open 911 autopatch is an excellent idea, until abused !
Our area has experienced late night prank calls and abuses of open 911.
Guess who is responsible... It's the repeater owner/club.
It's our phone number that shows up at 911, not the callers.
One local club was forced to take its autopatch off the system because
of open 911 misuse and prank calls.

If I pay for, install, maintain and assume full responsibility for my
or my club's equipment and its misuse, if it occurs, then we as
repeater owners should be able to oversee its use, and control its
autopatch operation as we see fit.

If you need to make a 911 call, ask someone on frequency to dial it up
for you. I've never heard an emergency call refused.

Before asking everyone to unite for mandating what others should do,
find out what goes on on the other end of the 911 autopatch call.

Don't come into my house and mandate how I should arrange my furniture.

Sorry, but you hit a nerve here !

I have taken my handhelds literally around the world. Well, distance-wise anyway. This is before the OKC bombing, though, and before the mass histeria and Uni-bomber's latest. My latest air trip was September 1992.

I have never had any problems at airports in this country or in Korea, Japan, or Alaska...or even California. Oh yeah, California IS in this country...8-D Ooops! I forgot...ever since I left California in 1969 I keep forgetting that.

I ALWAYS took my HT out of my carry-on luggage and had it visually inspected. And, I always separated the battery pack (I use the alkaline battery case) and opened it up to show the inspector the batteries inside. I also tell them that I keep the batteries in one compartment of my carry-on bag and the radio in another and that I keep the small plastic cover attached to the top of the battery case to keep from accidentally shorting out the batteries whilst in flight...or any other time for that matter.

On a personal note, I don't see why anyone should have a problem carrying their handheld radios on any flight. Sometimes it will happen where you might run into an over zealous inspector who knows everything about everything...I have yet to experience that.

Have a safe trip!

Date: 1995-08-06 00:00:00 UTC
From: eab@VOA.GOV
Message-ID: <DCwIw9.1y1@VOA.GOV>
Source record: 241024

The Antietam Radio Association is pleased to announce the 1995
edition of the Maryland DC QSO Party, the 2nd or 3rd most active
Eastern USA QSO Party.

TIMES: August 12 1600Z to 0400Z August 13 and
August 13 1600Z to 2359Z

PHONE & CW: CW QSOs in the CW bands only! Stations may be
worked once per band using each mode.

AWARDS: Each of the following winners will receive a
MDC QSO Party PLAQUE!

(1) Top non-MD-DC station
(2) Top MD-DC Station
(3) Top MD-DC Club

Certificates awarded for all other categories
including - 10 best MD-DC individual logs, best
each US State, Canadian Province, DX Country,
and MD-DC Mobile station entry.
Also certificates for best YL, and best QRP entry
for each state and the best Novice/Tech Class entry
for each state.

++++++++ A certificate is awarded to each entry
with 50 or more QSO POINTS in entry! ++++++++++

The Official Rules !

> 1. Non-MDC Stations must work only MDC stations.
> 2. MDC stations may work anyone.
> 3. Portables and mobiles that change MD counties during the
'test count as a separate station in each county.
> 4. Sorry, no packet or repeater QSOs are allowed.
> 5. QSOs that are a part of a regularly scheduled net are not
allowed.

EXCHANGE: QTH and MAJOR CATEGORY of enrty.
* QTH is county for MDC stations
* US State, Canadian Province, or
Country as appropriate for others.

MAJOR CATEGORIES are:
* CLUB,
* QRP,
* MOBILE,

* Novice/Tech, and
* STANDARD.

Stations should send the Major Category that
reflects their highest point value (see below).

SUGGESTED FREQUENCIES:
SSB: 3.92, 7.23, 14.26, 21.37, 28.38, 50.15 and 146.55 MHz
CW: 3.643, 3.701, 7.035, 7.126, 14.04, 21.115, 28.04 and
28.115 MHz
CW is suggested on the odd half hours. Examples: 1730Z,
1930Z, 2130Z, etc.

SCORING: * For Non-MDC stations, each MD County, Baltimore
City and Wsahington, DC are multipliers
(25 maximum possible).

* For MDC Stations, each MD County, Baltimore
City and Washington, DC (25 maximum possible)
plus each of the other 49 states, plus
Canadian Provinces + 1 (only) for other DX are
multipliers.

* Multipliers may be claimed once only. They do not
repeat on other bands or modes!

* QSO POINTS:

> 10 points for club station QSOs (Clubs anywhere
for MDC stations and only MDC Clubs for Non-MDC
Stations).

> 5 points for Mobile Station QSOs (Mobiles anywhere
for MDC Stations and only MDC mobile entries for
Non-MDC stations).

> 4 points for QRP or Novice/Tech QSOs (regardless
of mode).

> 3 points for CW or RTTY QSOs (RTTY & CW count as
the same scoring mode).

> 1 point for any other valid QSO (SSB & FM).

**Note: The highest single point value applies. That is, a
MOBILE/CLUB club is worth 10 QSO POINTS, for example.**

FINAL SCORE:
* The final score is the number of QSO POINTS
times the SUM of the multipliers.

SUBMISSION: Send logs with an S.A.S.E., by September 10th, 1995,
to: Antietam Radio Association
P.O.Box 52
Hagerstown, MD 21741-0052

Don't forget that we will be sending a certificate to all with 50 or more QSO Points who enter!

The Deleware-Lehigh ARC will hold its annual hamfest on Sunday, August 13, 1995, at the Career Institute of Technology, in Easton, PA. The doors open at 8 AM to the public (Vendor Set-up 5 AM). It will be held rain or shine. Admission is $4.00. For vendors- Tailgaiting $7.00, Indoor Tables $25.00. Full Breakfast and sancks available. The facility is handicapped accessible. There will be Forums, Door Prizes, DXCC Field Checking, Electrical Safety Demo, Electronic Test Bench, and VE Examinations (two sessions 10AM & 1:30 PM. - no preregistration, first come-first serve with sign up sheet, space limited, MUST have photo ID and original license and any CSCE's) ARRL Sanctioned. Talk-In on 146.70 rpt.

Info available from DLARC answering machine at (610)820-9110.

Source record: 241028

Planning on going on the traditional hidden transmitter hunts at the 1995 Southwestern Division ARRL Convention on the Queen Mary during Labor Day weekend? You'll need some direction-finding gear, but you won't need a car for the hunt this time. That's because HAMCON-95 will feature the first international-rules foxhunt ever staged in California, with hundreds of dollars in cash prizes available for the winners! It's all on foot, no vehicles allowed.

HAMCON/Foxhunt-95 will be the last event of the convention, beginning early Sunday afternoon (September 3) at an outdoor venue not far from the Queen Mary. It will be open to anyone of any age who has registered at the convention. Families are welcome, but all entrants will compete independently (no assistance allowed) and each entrant must bring his or her own RDF equipment. All transmitters will be on two-meter FM. Similar to IARU competitions, there will be separate divisions for various age groups. The Southern California Six Meter Club is organizing this event.

I will be posting more details about HAMCON/Foxhunt-95 and techniques for international-style foxhunting to packet BBS's, the Internet, and on-line services. There will also be information on what RDF equipment works well on this kind of hunt. You may have almost everything you need now.

Get your on-foot T-hunting gear ready. Have some practice hunts in your back yard. Register now for HAMCON-95 and plan to arrive at the Queen Mary early. There will be a forum session at 9 AM Saturday on how international-rules foxhunting is done, presented by hams who have participated in multi-nation competitions. Register for Sunday's Grand foxhunt after the forum. Then practice your foxhunting techniques by finding the many two-meter mini-T's and micro-T's that will be scattered around the convention area.

See you at HAMCON-95.

Then Poly Phaser was wrong. It is correct that if there was a direct
hit, that it will damage the foundation. Besides, you have concrete,
which is not the greatest of conductors between the rebar and ground.

>rebar net and, possibly, up into the steel structure of a building. I
>have put up metal buildings with the structure and rebar electrically tied
>together, but it all terminated into a healthy counterpose.

The standard rule of thumb for a Ufer ground is that there should be 20 lineal feet of connected 1/2 inch rebar for every 8,000 amperes of surge. The typical lightning bolt has a peak surge on the order of 8,000 amperes, so 20 feet is usually sufficient. Now that doesn't represent the current level where concrete will "explode", that rule of thumb applies to *effective* protective grounding. The point where concrete could crack or explode is at least a couple of orders of magnitude greater.

However, there are rare *superbolts* (mostly seen only in Florida) that can have peak surge currents of up to 200,000 amperes, so a rebar mesh containing 500 lineal feet of rebar should be used for ultimate protection. That represents a roughly 22 foot square slab with rebar spaced on 12 inch centers, not a hard requirement to meet. (For rebar to count toward the lineal footage, it must be spaced at least 6 inches from another parallel rebar counted toward the lineal footage.)

A *counterpoise* offers no protection, or at least protection so minimal as to not warrant discussion. Nor is a single driven rod as effective as 8 feet of rebar in a Ufer ground system, concrete serves as a more effective coupling to Earth than the small volume of soil in contact with a driven rod (unless the rod is driven in a permanently wet salt marsh). It normally takes at least 3 driven rods, spaced no closer than 16 feet on centers, in order to make even a minimal protective ground in typical soils. Lots more are better, with 9 being a good rule of thumb minimum number. When

you start contemplating sinking that many rods, the Ufer ground
begins to look very attractive if you'll be pouring a slab anyway.
(Of course a buried radial system can substitute for driven rods,
and is another alternative in some cases, such as when using base
fed tower radiators.)

Umm, did it ever occur to you that one of the easiest ways to horribly skew a poll is to make the ongoing results public knowledge? Even examples of an admittedly flawed political process like Usenet newsgroup creation votes have the good sense to keep the intermediate results confidential.

Why? Because knowing that a given vote is either going your way or not will affect your participation, and possibly your vote. For a poll to have any value, it must reflect a statistically valid random sample of the population you wish to survey and must reasonably reflect their opinions taken in an unbiased context without undue subjective influences.

I assume you are running these polls because you want to add some documentary evidence to the policy debates here on this newsgroup. If you want these polls to be taken more seriously, you need to run them a bit more scientifically. A good start would be to hide the results until the end of the polling period.

>Never had a problem. However, DO NOT transmit from the plane.
>This is FAA no no!

To expand on that further, do not *receive* in the plane either! As I understand it, operation any sort of superheterodyne radio receiver including conventional broadcast-band AM and FM sets, is verboten inside an airplane (without the pilot's permission).

The loose argument for that is that a spurious signal radiated from the local oscillator could interfere with the plane's communication or navigation receivers. Perhaps under that logic, t.r.f. sets are legal. I believe one such receiver was sold for a time to monitor communications in the VHF aircraft band while travelling by plane.

I would be interested to know if there are any restrictions on radio transmitter use at the airport terminal, or inside a plane that is parked at the gate.

I had the same thing happen... I was getting ready to teach the AOL course on the No-code tech license and was after Gordon West's text.... In passing I saw the book for the Advanced license and was going to buy it. Took it to the counter when I realized it was going to expire in about a month. Pointed this out to the clerk and he said, "yep, here" and he gave it to me. He said he'd just be throwing it out anyway.... Maybe there is a RS god.

August 7, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, N2MIP, WB3LUI, K8YSE, N8HTT, K9AJ, KG9N, K0EU, 4X6TT, DF4RD, F5JYD, G3NUG, G4BUE & DXNS, HP2CWB, HS1NIV/5, JF1MGI, JH2PDS/1, OK1ADM and DL9GOA & DX News Letter for the following DX information.

3E2, PANAMA (IOTA DXpeditions). The Radio Club Association Ondas Del Caribe (HP2ODC) will activate Isla Grande or Big Island with the IOTA Reference Number NA-202. The planned operation will take place August 26th and 27th. Operators will include: Ricardo/HP2CTM, Jose/HP2CWB, Emilio/HP2DFU and possibly others. They will use the special callsign 3E2G. Activity will be on 80-10 meters including the WARC bands. QSL vis HP2CTM, Ricardo Lee, P.O. Box 152, Colon, Republic of Panama or via the HP Bureau.

3W, VIETNAM. Nickolay, 3W5FM, continues to be active on CW/SSB/RTTY mainly on 20 meters between 1000 and 1400z, but JA sources report RTTY activities on 24923 kHz at 1044z and on 18103 kHz at 1050z. He will be there until September, or October if possible. He does not know how long his job will take in Vietnam. IMPORTANT NOTE: The QSL route as been changed. QSLs for 3W5FM and UA0FM/3W go to P.O. Box 66, Vladimir 600011, Russia. Nickolay and his family left Sakhalin Island and moved to Vladimir City. QSL will be handled by his daughter, Nataly, UA0FFL/3. There is no need to send your 2nd QSL request to the new POB if you have already sent the 1st one to his old POB. All QSLs they received in Sakhalin should be forwarded to the new address.

9M2, WEST MALAYSIA (Holiday IOTA DXpedition). Neville, G3NUG, informs OPDX that he plans to activate Pulau Babi Besar (AS-046), located in the Johor East/Pahang State Group, August 11-14th. He will also activate Pulau Perhentian Besar (AS-073), located in the Terengganu/Kelantan State Group, August 17-21st. Previous operations from these island groups were over 4 years ago. Activity will only be on SSB and the usual IOTA frequencies will be used, so check 14260, 18128, and 7055 kHz (+/- QRM, split 5/10

up). QSL to G3NUG or via bureau.

C6A, BAHAMAS. Chuck, KG9N, will be operating as KG9N/C6A from Abaco Island, August 11-18th. He plans to be active on RS-12 and particiate in the WAE CW Contest.

CENTRAL AMERICA DXPEDITION. Ulis, WB3LUI will be active from El Salvador and Costa Rica. He will be active mostly on the lower bands 40 and 80 meters, and possibly the higher bands if MUF permits. Activity will be mostly CW. From August 12-20th, Ulis will be in El Salvador signing YS4/TI5NW and from August 20-27th, in Costa Rica signing TI5NW. QSL via the CBA of WB3LUI.

CE0Z, JUAN FERNANDEZ. Randy/K0EU, Bob/K4UEE and Bob/K0IYF will be active from here September 13-20th. Operations will be on all bands with emphasis on the lower bands, WARC, and RTTY. They will use full sized Delta loops on 160/80 meters off a commercial 150 foot tall tower. Also a 2 element Cushcraft on 40 meters, 3 element tribander for 20-10 meters and a Cushcraft A3WS with 30 meters add on for WARC bands. The equipment consists of two TS450S stations, EWE (or beverage) for RX on 160/80. Three amplifiers including a Titan, L4B, and Alpha 76PA. QSL is to K0IYF.

CY3, CANADA. A special station will be active from September 22nd to October 1st signing CY3IARU during the IARU Region 2 Conference.

CY9 DXPEDITION UPDATE. Bob, KW2P (aka KW2P/CY9), reports the DXpedition team had a great time making 11,600 QSOs, 940 JA QSOs and 154 QSOs on 160 meters. He stated low band conditions were great and the best bands were 14 and 18 MHz. Also many satellite QSOs were made. Bob would like to thank everybody for the contacts.

FT8X, KERGUELEN. The DX News Sheets report that Jean Jacques, FB1LYF, (ex J28CW) will be on Kerguelen Island for a year starting November.

IH9, PANTELLERIA ISLAND (ITALY). Francesco, IK0XBX, will be active from here August 20th to September 1st. Pantelleria Island counts for IOTA AF-018 and TP-001 for Italy Islands Award. He will use the callsign IH9/IK0XBX on CW/SSB on 80-10 meters (including the WARC bands). QSL via IK0XBX, Francesco Fucelli, Str. S.Lucia 38, 06125 PERUGIA, ITALY or (after November 1st) I0ZUT, BOX 82, 06100 PERUGIA, ITALY or also via bureau.

JY, JORDAN. Admir, 4X6TT, will be traveling once again to Amman and will be active as JY8TT. His main reason for this visit is to help do the work on JY74 cards. Amdir states that 17000 QSOs (CW/SSB/RTTY and all bands) were made during the special joint 4X/JY operation that took place at the end of July to celebrate the first anniversary of the Washington Declaration.

NEW QSL MANAGER IN THE WORKS FOR 5R8DS AND 5R8DY. Ben, 5R8DS, informs OPDX he is temporarily in Holland for leave and holiday. During his stay he will decide on what QSL Manager to adopt to solve the 5R8DS and 5R8DY (Marian) QSL problem. It will most probably be a PA-station. Stay

tuned for updates.

NODXA WORLD-WIDE WEB HOME PAGE. The Northern Ohio DX Association has a presence on the internet and can be accessed via the K8YSE home page: http://www.en.com/users/k8yse
Information about NODXA including the NODXA Award, Honor Roll and DXCC Patches, membership application procedures, officers, meeting minutes, DXpedtions supported along with lots of graphics is now availble to those having Netscape or another suitable viewer. Our thanks to ExchangeNet Services for providing the internet resources to the club.

THIRD CANADIAN IOTA TOUR. Bruno, F5JYD, announced that F5SSM and himself will be active for the third time in CANADA (VE7), August 11-26th. They will be active from different islands for IOTA & C.IS.A awards. Activity will be on all bands (including the WARC bands). QSL via F5JYD. Their previous operation was from Vancouver Island Group (NA-036 Texada Island, NA-091 Gabriola Island, NA-075 Prince Rupert, NA-061 Queen Charlotte) using the previous callsigns of VE7/TM7I and XJ7/TM7I.

TI9, COCOS ISLAND. Jose, TI9JJP, will be active until August 15th. If you miss him on this trip, you have a second chance to work him between October 4th and 20th. Look for him on 7050 kHz between 0200 and 0530z. Also check 14195 kHz at various times throughout the day. He has also been heard on 24940 kHz around 2330z. QSL to Jose Pastora, P.O. Box 330, 1000 San Jose, Costa Rica.

VK9C, COCOS ISLAND. Uwe, DJ9HX, who was active this past week as VK9XI from Christmas Island, has moved on to Cocos Island signing VK9CJ. His activity should last until August 16.

XF4, REVILLAGIGEDO. Nellie, XE1CI, is planning another visit here during sometime in September.

XU, KAMPUCHEA (CAMBODIA). Wolff, DJ5JH, reports having a QSO on July 27th with S21/PA3BTQ and was told that PA3BTQ would be active as XU6TQ in September for 2 weeks. Afterwards he will be going to YA-land with only a slim chance of operating.

XY, MYANMAR (BURMA). Reports state that a group of Japnese operators and Ray, HS0/G0NOM were active as XY1HT for a few days last week to demonstrate SSTV and RTTY to government officials. There was very little activity on the other modes, but some 154 QSOs were made.

YS, EL SALVADOR. Kent, N2MIP, will be traveling to San Salvador this fall and will be active as YS1ZKR November 5-11th. This will be the first ever Satellite DX opportunity from El Salvador. In addition, he will be helping a recently licensed resident of El Salvador set up some wire antennas for HF operation. Once these are in place, he will operate on HF during the times that there are no windows to the birds. Satellite operation will be primarily on Oscar 13, with Oscar 10 as backup and also to provide additional coverage. Mutual windows with Asia and Europe will be at a premium and exclusive times with these areas will be provided.

ZC4, U.K. SOVEREIGN BASE AREAS ON CYPRUS. OK1RF and OK1RI plan to be active from here as ZC4C between August 6th and 18th. They will be an entry in the WAE CW Contest, but before and after the contest they will be active on CW/SSB on 160-10 meters (including the WARC bands). QSL via OK1RI.

SILENT KEY. On July 26th, Miriam West Smith, KB4C, head of Production and Circulation and the wife of Editor Carl Smith, N4AA, of the "QRZ DX" Bulletin became a silent key. Individuals at OPDX/NODXA would like to extend our deepest sympathies to Carl for his great loss during these difficult times.

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

>On the other hand you could use some sort of transmitter fingerprinting to ID
>the person too but how many repeater owners really want to do stuff like this?

Naw, better yet, the repeater controller would automatically match
the transmitter fingerprint to a table of authorized transmitters!

2343. IOTA Help

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-07 00:00:00 UTC
From: jlloyd@PROBLEM_WITH_INEWS_GATEWAY_FILE
Message-ID: <405vkl$6rq@hubcap.clemson.edu>
Source record: 240888

Hello,
I was planning to take the family to the beach in either NC or
DE. And of course I planned to take the mobile rig. Then I came
up with this idea of working from an IOTA island. There must be several
off these two states. However, I am not an IOTA collector and do not
know the rules of IOTA. Can anyone fill me in on freqs, rules, and
islands off these two states? Islands with campgrounds would be ideal.
If this plan looks like it will work I will print some QSL cards
and hopefully give someone a new island. (And maybe work some new states
myself!)

Just a thought to keep in mind in all this. There is a charge in NC called Misuse of 911. I am not sure what type offense or penalty it carries. For the trustee of the repeater this could be a problem. Since the phone line is in their name they would be the one charged.

Message-ID: <4062j4$j8j@chnews.ch.intel.com>
Source record: 240893

In article <405sgn$dmt@nuclear.microserve.net>,
WB3U <jackl@pinetree.microserve.com> wrote:

>When I was licensed in 1966, the explanation I first heard was that Ham is
>short for Amateur.

My Elmer told me in 1952 that ham is short for 'amateur as pronounced
with a cockney accent.

There's a newspaper column entitled "Word For Word". Here is a quote:

"An earlier Word For Word suggested that the term HAM actor probably
referred to the HAM fat once used to remove make-up. On the other hand,
'A HAM Radio Operator' is certainly a play on the word AMATEUR! The
term was coined in the 1920s!"

It fits with what I was told 43 years ago, it makes sense, and it's
been researched by linguists.

2349. Re: Radio Shack 2m amplifier

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-07 00:00:00 UTC
From: hlester@nemo.as.arizona.edu
Message-ID: <4066vp$9ji@news.ccit.arizona.edu>
Source record: 240894

I got my repaired amp back from Radio Shack on Saturday. Well, actually, they gave me a new one. Turns out the one I had was "not economical to repair". No, I don't get a new warranty - the warranty expires a year from April when I originally bought it.

This one seems to work differently: for one, I did hear some intermod. Two, there is apparently a preamp in the receive section, as evidenced by the fact that when I turn the amp ON, the 2m received signals increase. I did not notice that happening with the other unit. Out-of-bad signals do decrease when the amp is ON, as well they should.

10-X is an organization formed a couple of sunspot cycles ago to promote use of ten meters when activity is low during sunspot minimums. You collect 10 10-X numbers and send them to whoever the director is these days (ask someone with a number. It's been so many years ago since I've got mine, I haven't kept up.
You can really get involved in this. After you get your certificate there are many many endorsements. Some people have worked literally thousands of numbers. Also there are many local affiliates that give out awards for contacts on ten. 73

HAMFEST HAMFEST HAMFEST HAMFEST HAMFEST

<><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><>

The Cedar Valley Amateur Radio Club Hamfest and Fleamarket is quickly
approaching.

It will be on August 13th, in Cedar Rapids at the Teamsters Hall at
5000 Jst SW.

The hours are 8AM till 4PM. The cost of admission is a measly
$4, which is also your prize entry. Of course your welcome to buy more
than one ticket to increase your odds if you wish.

There will be Prizes Galore !! There will be multiple door prizes with the
drawing for the Grand Prize Kenwood TS50 at 2PM.

There will be 20 vendors inside the hall and who knows who many selling
outside in the Fleamarket.

How do I get there, you ask. Get onto I-380 and head to Cedar Rapids. When
you get into Cedar Rapids get off at the 33rd Ave exit turn East on 33rd Ave
to Jst , go South on J st for about 2 miles (or until you see the hall on
the right). There will also be signs posted to help out. Talk in will be
on the 146.145/745, repeater.

See you there.

From: dearnshaw@worldbank.org
Message-ID: <40acd5$v3d@minerva.worldbank.org>
Source record: 240901

I read of a disturbing rumor on the local (East-coast) Packetcluster over the weekend. It was a message posted by someone, whose call escapes me, to the effect that they had heard of a conversation between someone at the League and a third-party about the future of the DXCC program in the year 2000. As I understood the message (and I'm recalling from memory), the gist was that the new program would have a single award - 100 countries; no band/mode/Honor Roll, etc. I have absolutely no idea whether there is any substance to this rumor, and I do not wish to propagate it further if it is groundless, however if anyone else has more definitive information about this topic, I'm sure a LOT of people will be very interested. (I have sent a message to my local ARRL Director, but as yet, no reply. Maybe the League would like to comment, and kill the rumor if it is false.)

73, Darrell (NR3Y).

Ham Radio & More is on the Talk America Network. It is aired LIVE
every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show
can really work.

Also, be sure to check out our WWW Home Page. It has information on
upcoming shows,reviews of past shows, and even theme music. It is
updated courtesy of the Boston Amateur Radio Club. Access it at:
http://www.oakland.edu/barc/ham-more.html

when he passed element 3A 2 months after element 2, he was issued
a Technician license. good for 10 years. the CSCE for element 2 is
voided by that.

when he passes element 1A at any time in the future, he's upgraded to a
Technician Plus.

Er, "lastest and greatest"?

From the files of the ARRL Automated Mail Server, (info@arrl.org):
file: advanced.txt updated: 10-23-92

I recently went looking for current question pools myself, and was amazed
at how difficult it was to find them on the net. I was equally amazed that
BARC and ARRL would leave outdated stuff like this around, but I guess that's
another matter....

Mike Keitz, mkeitz@bev.net writes:

> I would be interested to know if there are any restrictions on radio
> transmitter use at the airport terminal, or inside a plane that is parked
> at the gate.

Read Part 97.11:

"The installation and operation of an amateur station on a ship or aircraft must be approved by the master of the ship or pilot in command of the aircraft. [....] The station's transmissions must not cause interference to any other apparatus installed on the ship or aircraft." (47 CFR 97.11(a)(b).)

The rule say that any amateur transmitter operation *on* a ship or plane must be approved by the ship's master (captain) or the plane's pilot.

It doesn't say anything about whether the ship is at sea or in port, whether the plane is on the ground or in the air. Nor does it say anything about private or commercial vessels. It says that that if you carry a transceiver aboard, you must have permission to operate.

If you carry your HT aboard my yacht or plane (don't I wish), you must have my permission to operate. This is not only a matter of courtesy, but of statute, since I am ultimately legally responsible for >all< transmissions and proper operation of equipment aboard my vessel.

In fact, the ARRL *did* commission and pay for a professional poll,
just prior to the code test free Technician licensing change. That's
where the numbers you see bandied about the net on the relative
percentages of users of the various modulation encodings come from.
The ARRL leadership has never released the full results of that
poll, just bits and pieces, but there's little doubt that it has
been used internally to shape ARRL policies.

From: davros@news.eden.com
Message-ID: <405d3t$evb@matrix.eden.com>
Source record: 240963

It was recently pointed out to me that, in my last post on this subject, I forgot something very important. All Austin-type hams will probably know the story; I know they do, or many do, because I'm always reminded of it whenever I see people...

I did once get an ht stolen from me on a bus. However, I must point out that this was due to my then overly trusting and generally nice-guy-type demeanour, not to mention a bit of stupidity. I'm a lot more smarter now. Briefly, this fellow got on the bus. The driver had gotten off the bus to use the can. The guy walked up to me and said, "Say, is that a scanner?" "No," I answered, "it's a ham radio." "Ah! Can I see it?" "Sure..."...I guess he liked what he saw, because he didn't give it back after he finished looking at it. The lesson here: Don't be so stupid and think that people want to know about ham radio and hand them your radio. :-) If you don't do anything stupid like that, chances are you'll keep your radio. Since then, I always have. But, just in case, let me knock on this fine wooden dresser over yonder.

2376. Commercial Radio Exam Opportunity * Wed. August 9th * Cambridge MA

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-07 00:00:00 UTC
From: w1gsl@ATHENA.MIT.EDU
Message-ID: <405ha0$gv9@senator-bedfellow.MIT.EDU>
Source record: 240964
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sci.electronics,rec.boats

Subject: Commercial Radio Exams * 9 August * 7:30 PM * Cambridge MA

Summary: MROP GROL GMDSS Radar + Radio Telegraph Operator exams

** Extra exam session added **
** FCC Regulatory fee eliminated **
** Question pools to be changed effective Jan 1 1996 **
** New questions will be released in the fall **

Keywords: Radio Exams Commercial GROL GMDSS MROP T2 Radar

The MIT Radio Exam Team will hold exams for all classes
of commercial radio license at 77 Mass Ave, Cambridge MA in
MIT's room 1-150 at 7:30 PM.

We will conduct exams for the General Radiotelephone Operators
License, the Marine Radio Operators Permit, the Global Marine
Distress and Safety Systems Maintainer and Operator Licenses, the
Radar Endorsement and the Radiotelegraph operators Certificate.

At least for the moment the FCC has eliminated the $35 regulatory
fee charged when applying for for 5 year licenses. A similar fee
may be imposed in the future. This does not change the $35
examination fee we charge to give the exam.

The question pools for all the commercial exams will be revised
to be effective January 1st 1996. It is rumored the GROL will
be made much more difficult. The new questions will be released
in the fall. Those planing to take exams before the new year
should continue to study from the now available guides.

Our next commercial exam session will be held at 10 AM on
Saturday September 9th in Cambridge MA at 77 Mass Ave in
MIT's Room 1-150.

A regular schedule of exams is planned for Cambridge MA on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil. For the Telegraph exams bring 2
passport style photos in an envelope to attach to your
application.

Copies of the question pools are available from the Government Printing office or from W5YI at 1 800 669 9594. This is probably the best study guide available for the GMDSS, Radar and Telegraph exams.

* A comprehensive text book by Fred Maia and Gordon West covering the MROP and GROL exam material is now available at Radio Shack.

The General Radio Telephone Operators License is required to service transmitters in the aviation, maritime and international radio services. A Maritime Radio Operators Permit is required to operate radiotelephone stations aboard ships carrying passengers for hire and certain aviation and coast stations. Large ocean going ships will be required to carry two Global Maritime Distress and Safety Systems - operator licenses. A GMDSS Maintainer License is required to service GMDSS equipment. A Radiotelegraph Operators Certificate is required to be a radio officer aboard certain large ocean going ships.

Amateur Extra Class operators may be particularly interested in obtaining a commercial telegraph license as they will receive credit for the required class code exam. Bring your original amateur license and a copy to claim this credit.

The MIT Radio Exam Team operates under the auspices of the National Radio Examiners COLEM, part of the W5YI group.

From: jwc@col.hp.com
Message-ID: <405k07$jcm@nonews.col.hp.com>
Source record: 240967

We too had/have problems with 911 calls on wide area repeater.
No phone lines at site so 220 link is used for patch. This puts the phone line in county area. The county & and City have different 911 dispatch locations.
If some one hangs up or gets timed out (3 minutes), a Deputy is dispatched to the home where the phone line is listed. He knocks on the door until the ham ther wakes up or leaves a note if he's not home.
Try as we will we can't get either 911 office to put permanent note saying what that phone line is. It is a second line to that hams home.
This repeater covers an additional 5 or 6 counties.
We have speed dials programed in but the speed dials are only known to the approx 450 members.
Even when the operator tells 911 that it's radio phone if the patch is dropped (many times it takes so long for 911 to get right enity on line that the 3 minute timeout takes over) the 911 operator dials back on that line and gets nothing. So again the deputy is dispatched.
Anyway we tell our members to use patch for 911 only if there is no one else to handle the call.

We still have developments here in central N.C. that don't have
restrictions against antennas. You have to get away from the Raleigh/
Research Triangle area, but you can still be within commuting distance.

>Then you were intelligent AND informed before you bought. This doesn't

As an ME, that's one of the reasons I took a real estate course
(only $15 at the local community college) before I bought my house
12 years ago. Actually, I took the course 4 years before I bought
my house, and as I bought and sold some land prior to buying the
house, it paid for the time and effort overwhelmingly in the real
estate fees I saved by handling some of the sales myself.

When I made the offer for the house, it was contingent upon their
being "no restrictions on outside antennas". I've been a ham since
I was 13 years old, and a car/home without an antenna is unthinkable!
Fortunately, this development was out in the boonies (but not so much,
nowadays) and there was no restrictions on antennas. There WERE

quite a few other restrictions though, and I'm glad I knew about them
before purchasing the house.
I definitely recommend taking a real estate course if you can.

2384. Which licence for HF in USA?

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-07 00:00:00 UTC
From: 193.96.231.25
Message-ID: <405do8INNtn@midas.cellware.de>
Source record: 240972

Hi folks,

browsing this newsgroup from time to time I have an idea that there are
several licences in the USA like tech, advanced etc.
Can someone enlighten a foreigner what wich licence implies?
I suppose they form a hierarchy like ours here in Germany (C-A-B not A-B-C
[lowest->highest]!!)) do? Especially I'm interested which license is needed
at least to work on the HF bands?

|> very concerned with aesthetics and how they affect their property values.
|>
|> bill KB3YV

Well, so you do! Amazing!

And just how do towers and antennas affect adjoining property values?
The answer is "They do not."

Several people have already posted the results from the studies
which show this.

The issue is not one of property values, but one of "We can control
you, and if you do not think so, just try and put up an antenna
here. We don't like them, and so we will not allow them."

I don't happen to like lots of things my neighbors do (like
painting their houses in pastel colors, for example, or having
tiny little manicured lawns instead of natural habitat).

But I do not attempt to CONTROL what they do, but rather attempt
to INFLUENCE how they do these things.

In most of the Western US, if you want a tower, you cannot live in:
a city; a housing development; a neighborhood; a large town.

You have little or no control over the use of the property you own;
what you can do, how you do it, and when you can do it has been
decided for you. If you don't like it, you CANNOT "buy some other
house" because they don't exist.

And yes, I call this bigotry when people attempt to control what others can do "Because they don't happen to like it."

>from beyond struck...

At SKYWARN training at our radio club the meteorologist shows a
picture of a pretty girl (about 20 or so) in the N.C. mountains
smiling at the camera as her long brown hair stands on end. It is
not raining.
Then he tells us that she was struck by lightning and killed about
2 minutes later.
The moral: if your hair starts standing on end in thunderstorm
weather, make like a snake and "slither" to someplace else as quickly
as you can!
Sounds like you got REALLY lucky.

When I was licensed in 1966, the explanation I first heard was that Ham is
short for Amateur.

I haven't been following this thread very well, so sorry if this was
already mentioned.

From: Simon Twigger <simont@post.its.mcw.edu>
Message-ID: <405sr8$j3h@post.its.mcw.edu>
Source record: 240977

HI there,

I just changed my callsign as a result of upgrading my licence.
I intend to get some QSL cards printed up now my call isnt likely
to change for a while, and I was wondering how this might affect
QSL's using my previous call. I havent sent out many QSL's using
my old call, but I have quite a few to send - can I use
the QSL cards with my new callsign on as long as I write on my old call,
or would this invalidate the QSLs for DXCC purposes or whatever else
the other station might want to use them for?

Thanks for any advice anyone can give.

Stefan,
To work HF in the U.S. you need a novice, technician plus, general,
advanced or extra license. The no-code license is technician class, no HF
privledges. For Novice and tech plus you need to know morse code at 5wpm.
For general class you need to know 13 wpm.
I'm a tech at the moment but I'm studing for my 5wpm code test to upgrade
to a tech plus. From there I'll go for the general class.

Indeed. Not every repeater owner is going to go through the trouble of replacing his/her controller just so 911 can be accessed.

> Although (thank God) we have few problems in general with people abusing the
> repeaters in our area but we had to pull the 911 support due to abuse.

Same thing here in Rhode Island. The autopatch on the 146.70 machine is not open but requires a code to activate it. Even with that code people were still dialing up 911 and hanging up.

What I wish is that someone would design a super-controller where each user has their own access code. This wouldn't be too difficult to implement but the only hole I see is someone capturing the individuals code and then using it. On the other hand you could use some sort of transmitter fingerprinting to ID the person too but how many repeater owners really want to do stuff like this?

Actually they probably won't even require you to do that if you put it in a carry-on container. My only experiences have been at Greene Airport in RI and Newark International and those were with my laptop. They just put em' through the x-ray and it's off you go. And no, the x-ray at either airport won't damage your computer.

Tech --no code is limited to vhf and uhf

A novice and TECH-plus can use 10 meters.
then it goes from the lowest class to the hiher class
General then advance then EXTRA. Extra being the highest

I seem to recall seeing a brochure from an outfit that made autopatch-only machines. You set one up at home (with a good antenna), and it'll let you access your home phone line while remote.

I remember that the devices were a bit pricey, considering the complexity of the problem. Does anyone know more about the company, or about low-cost methods of achieving the same end?

This is a two sided problem...and I've been on both sides, winnning and losing.

Twice in the last month I've been first on the scene at a MVA while traveling away from my home area. The first, near Laconia NH at 11:30 PM I was unable to raise any ham on three repeaters to place a 911 call for me and waited for a car with a cell phone to come and call 911. The second, last sunday evening, at 10:00 PM I was successful in raising a station to place a 911 call for me and we had police on the scene within three minutes, ambulance in eight minutes.

Also, consider the following potential scenario...a new ham encounters an emergency situtation, dials *911 and get the call started but is unable to continue the communication because he doesn't understand the process well...it shows up as a dead call but is actually a cockpit problem with the caller.

In our society change of your name dosnt change your legal obligations-
that for and in accordance with DXCC rules you may apply for credits
with old/new calsign.
Same prefix hunters may ask you for your old calsign since it may be rare
so - you can print your QSL with the new call and add ex-old one.

: They don't let extra-class hams into heaven if they die by
: electrocution!" But I've never heard of anyone getting shocked by EMP!

Not EMP, just static. I've watched a lot of safety film regarding material handling and static discharge. It is a misconception that the tower is likely to be hit by a bolt of lighting (or a lighting rod). All that needs to happen is the storm to pass through and have the air charge up around your tower. This is the point in lightning rods. They discharge the static before theres lightning, not afterwards.

Actually, almost anything moving can cause static buildup. One common way is to pour liquids through air(like filling your aircraft). That's why grounding is so important there. One day when an electrical storm was moving through I stopped by the airport to find the guy refilling the fuel truck. Not only was there increased chance of static ignnition on the fuel truck, but he was standing on top of the thing, making him the highest conductor around (I mused that it could only be made better had he been smoking).

I got about five feet away from a lightning strike once. I was sitting in my car with the window rolled down at a stop light. I heard this strange hissing noise and had just enough time to turn my head when lightening struck the light pole next to my car.

Sorry, the 1st post was encoded.. Sorry...

Greg Jones, WD5IVD, will be the guest on this week's Ham Radio & More Show, 8/13/95, at 6:00pm ET. If you have questions about the upcoming TAPR Convention, packet, other digital modes, or certain aspects of phase 3d, call in on the toll free listener call-in line during the show. You could win some super prizes, too.

Ham Radio & More is on the Talk America Network. It is aired LIVE every Sunday at 6:00pm Eastern Time, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The originating station number is 1-602-241-1510 for more information.

Any radio station can air the show FREE OF CHARGE. Get your local station to air the show by calling the program director asking them to air the show. Faxes help, too. Again,there is NO CHARGE for the station to air the show, so a lot of calls asking for the show can really work.

Also, be sure to check out our WWW Home Page. It has information on upcoming shows,reviews of past shows, and even theme music. It is updated courtesy of the Boston Amateur Radio Club. Access it at: http://www.oakland.edu/barc/ham-more.html

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z AUGUST 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 AUGUST AND FORECAST FOR 09 AUGUST - 11 AUGUST

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 07 Aug
Daily Proton Fluence >1 MeV: 9.7E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.4E+06 (normal)
X-ray background: A2.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Aug 10 Aug 11 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Aug: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 07 Aug
Learmonth 10 3332 2132
Fredericksburg 15 9
Planetary 12 7

Observed Kp for 07 Aug: 0112 3233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Aug 12 Quiet to unsettled
10 Aug 5 Quiet
11 Aug 5 Quiet
COMMENT: Unsettled levels observed on 8 August were due to a solar
coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
08 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Aug normal normal fair
10 Aug normal normal normal
11 Aug normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
08 Aug 33 Near predicted monthly values during daylight hours,
with 15-50% enhancements and Spread F during local
night.

Predicted Monthly T index for August: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
09 Aug 30 Near predicted monthly values during local day,
10-30% enhanced at night.
10 Aug 30 Near predicted monthly values during local day,
10-30% enhanced at night.
11 Aug 30 Near predicted monthly values during local day,
10-30% enhanced at night.
COMMENT: Darwin MUFs: near predicted monthly values, with night-time
Spread F.
Townsville MUFs: near predicted monthly values.
Hobart MUFs: near predicted monthly values, with strong night-time
Sporadic E layer.

ZCZC AX08
QST de W1AW
Special Bulletin 38 ARLX038
From ARRL Headquarters
Newington CT August 8, 1995
To all radio amateurs

SB SPCL ARL ARLX038
ARLX038 Dick Cotton, W8DX, SK

Dick Cotton, W8DX, a former FCC engineer in charge at the Detroit Field Office, died July 29, 1995, in Detroit. He was 89 years old.

He was born in Minneapolis in 1905 and graduated from the University of Minnesota with a degree in ''radio engineering.'' He attended university in the 1920s while also working as a shipboard radio operator plying the Great Lakes.

Following a stint at a US government monitoring station on Mt. Hood, Oregon, he joined the Federal Radio Commission's Detroit office in the early 1930s. He was a government employee of the FRC and then the Federal Communications Commission continuously until retiring in 1971, finishing his career as engineer in charge.

He was first licensed in the early 1920s, and held W8LEC before becoming W8DX. An active DXer (331 Mixed as of 1986), he was one of the first amateurs on the Oscar satellites and held satellite DXCC. He was an ARRL life member.

His successor as EIC of the Detroit office, Ed Atems, W8BX, remembered Cotton as someone who ''got on amateur television by winding his own deflection yoke coil.'' In the early days he also made his own variable capacitors. Atems retired in 1978. The current Detroit EIC is Jim Bridgewater, AA8JD.

Richard Cotton was buried in Detroit. He leaves a son, Richard Cotton Jr, and a daughter, Mary Green.

Are you quite certain? Last time I was on a plane, radios (along with computers and other "noisy" things) couldn't be used during takeoff or landing, but were ok in between. (Be sure to set Transmit Stop, of course!) I listened to my HT on that flight, and the attendant wanted to make sure it wasn't a cellphone. I assured her it wasn't, that it was just a radio. With transmit diabled, that's true. No problem.

Can't say much, I guess. I ordered a Yaesu FT-2400 and an Astron RS-20M power supply from Radio City the week before Dayton 1994. Overall the person I spoke with was pleasant and answered all my questions. The prices quoted were on par with AES and HRO, but he whipped their shipping costs hand down.

I have never really gotten a good grasp on shipping charges. More to the point, if UPS charges $7.50 shipping, why does A charge $25 and B charge $15 when both are in the same zone?

It seems some companies are using "shipping charges" as profit enhancers of sorts.

>| Email: sw@cellware.de |
>| WWW: http://www.cellware.de/ |
>|____|
>Do 't tou h the f op ydi ks su f ce!
>
The license structure is as follows:

Name: Code: Priviledges:
Novice 5wpm CW on parts of 80, 40, 15, and 10 meters, and
SSB on part of 10 meters, and
some very limited UHF priviledges

Technician 0 All bands above 30MHz
(no code)

Technician 5wpm All bands above 30MHz, plus
(plus) Novice priviledges

General 13wpm CW and SSB on parts of all HF bands,
All bands above 30 MHz

Advanced 13wpm Same as general, but larger part of HF bands

Extra 20wpm Full priviledges on all amateur bands

The Novice class was originally intended as the entry point, with
operators upgrading to General class after they had mastered CW
(Until several years ago, Novices had only CW priviledges on HF. Many
years ago, the Novice class license was a two year, non-renewable
license). The Advanced and Extra classes were designed to entice Generals
to upgrade in order to obtain priviledges on larger portions of the bands.

The Technician class was designed for VHF/UHF experimenters. However, with the introduction of the no-code Technician class, this seems to be the entry point, with new users upgrading to Technican plus licenses.

> local PD you are handling an emergency situation.

Using a different # for 911 access, and only giving it to people who understand the limitations and hazards of the autopatch (i.e automatically traced and is impossible to ringback if the E911 operator calls the number back), seems to work here- although 99% of the time it is best, and people use the speeddial number of the specific agency/municipality they need to speak to.

Our machine(s) also disable the regular TO timer for all emergency speed dialed numbers, and there is not a reason to worry about violating part 97:

97.213 (b) concerns Telecommand of an amateur station:
"Provisions are incorportated to limit transmissions by the station to a period of no more than 3 minutes in the event of malfunctioning in the control link."

As long as the radio-user unkeys every 3 minutes (and with a half-duplex patch I would hope the period is much shorter than this!!) the patch can run infinitely, just as your repeater's transmitter is not required to unkey momentarily every 3 minutes.

Another response to this thread commented on 911 dialing the Highway Patrol/State police. Is there any move anywhere to standardize this (yes I know- this is just as easily abused). The cellphone companies in Iowa either had exactly one bright idea, or were forced (by some enlightened bureaucrat!) to support *55 as an autodial to the IHP. Easy to remember, universal throughout the area, etc. Too bad a few "hams" have to screw up universal codes like this on amateur repeaters by playing games ("hams" is used loosely, since these violators are not true hams in the elegant sense, and some probably are not even licensed).

I need some guidance on an equipment purchase. I am a new technician in the Dallas, TX area and want to purchase a Handi-talkie. Is it worth the added expense to buy a dual-band unit? Your thoughts would be greatly appreciated.

I've taken all kinds of equipment on board including HT's, scanners, HF gear including transceivers and linears, etc. with no problem. In fact, some European airlines have permitted use of AM/FM receivers to listen in to broadcasters below - much to the delight of passengers who want to hear what local radio stations sound like.

I travelled with a former pilot one time on America West Airlines who was monitoring everything up-front using a scanner while sitting in the passenger section. He did everything he could to conceal the scanner while explaining to me that as a pilot he could verify there was NO WAY the oscillations could disturb such highlysophisticated, filtered equipment that moderns planes are equipped with.

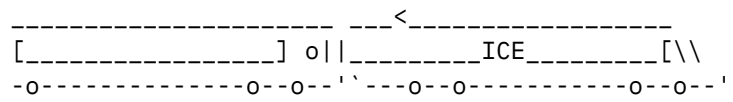
Hi, I'm sure this is an easy one...

I'm going to Germany for a month in October, and I am planning to take over a QRP rig and do a little operating. I was wondering I am a General Class operator and would like to get a German licence for operation, (and as a souvenir) How would I go about obtaining one? Can I do it in the Airport? Does Germany Reciprocate with Americans. What would my priviliges be?

thanks for any and all info...



Ahhh The ICE. The only way to Fly!

This week in the beautiful neighborhood I live in, we are attempting to get enough signatures to change the covenant regarding outdoor antennas. In the CCR document that I and all my neighbors signed is a provision that enables anyone with the ability to get 75% of the homeowners to agree to a change, to effect the change. My responsibility as a licensed operator is to handle my radio affairs in a neighborly and professional manner. I have to restrain myself from acts that would tarnish the image of the hobby.

Lots of folks have seen the effects of mega-amped CB radios on their TV sets and are suspicious of ham antennas. By simply showing your neighbors around your shack and making an honest effort to get them interested in radio, you can solve most of the problems. A little diplomacy can go a long way.

I explained to my neighbors that my station would be used to assist the community during a disaster or national emergency. Outlining the tower constuction limitations in the covenants, limiting the height to a reasonable size for the neighborhood and conforming with the local ordinances regarding setbacks and materials; agreeing to cease any activities that disrupt commercial reception; and just being nice about the whole situation will probably get your tower built.

Change the CCRs.

The Nienberge Amateur Radio Group (Germany) performed its second balloon
launch on sunday, 07-16-95 (I apologize for this late report: QRL hr!).

This was our announcement:
> We planned to have another emergency beacon with our regular balloon
> equipment, and it now is ready for a launch. Since we have some (smaller) spare
> balloons, we plan to do a launch with only this rig: 2 m beacon - no data, no
> remote control, no gas valve; just launching and parachuting (hopefully) "home"
> after bursting.

It should be a 2 - 3 hours flight.

Yes, that's what we intended... but, of course, the actual flight was totally different!

ARTOB launch 07-16-95:

Launch: # 2
Launch date 07-16-95
Launch time: 1201 UTC
Launch site: Nienberge near Muenster, NW Germany, JO32SA
Call sign: DL0ART/am
QRG/mod.: 144.991 MHz F1A beacon: call sign and info in FM audio CW,
in between freq shift slow (- - - - - - = balloon lifts) or
fast (......... = balloon is descending) (using a quicksilver
switch)
Power: 100 mW
Antenna: groundplane
Diameter ballon: ca. 3 ft
Gas: hydrogen
Parachute: ca. 5 ft
Weight: 490 g (over all)
Lift rate: ca. 200 g

(UTC)
11:00 Meeting of the team at launch site
11:20 weather data:
ground wind 14 knots, 240 deg
12:01 launch
12:10 DF teams start to their dedicated areas

The author had a hard moment when the parachute of the launched balloon did
not open immediately - but after a few moments, it did...

So far, everything was on schedule.

But it turned out that the ballon was drifting E/SE with quite a high speed.
The DF teams had a very hard time following. At 14:30 the balloon left quit

the area of the maps used by the teams (we use a very special system for giving DF results to the coordinator). Furthermore, the main DF coordintor, Joachim, DL3YBQ), had to head home and left us alone... I guess that was the moment when we lost (just a little bit) control of the situation.
And: the beacon signal still indicated the balloon lifting!

The DF teams continued following the balloon, but soon it is obvious that its speed was to high for us - most of the teams were just driving on highways in this rural area where we found ourselves. These roads seemed to lead anywere except to the place were the balloon apparently was... so we finally switched over to interstates. At about 18:00 most of us were in the Goettingen area (160 km linear distance), and still the DF results were unanimous: east!

East of Goettingen, the Harz begins - a secondary chain of mountains (summits up to 3200 ft). Another old man located in these mountains told us that his QTE also was - east.

So we finally decided at 18:30 UTC - that was 20:30 local time and about the time of sun set - to finish our hunt and go home.

What has happened?
Obviously, the lift of the balloon was not sufficient to bring it to a height where it would burst. We ae not sure if the gaz filling was insufficient or if maybe the parachute had slowed the lift so much that the balloon already lost too much gaz on its way up. It also passed a thunderstorm area, so maybe the balloon and the payload were covered with ice during some parts of its journey.

There also was another (so far) unexplained effect: about 2 hours after the launch, the beacon freq increased by abt 4 or 5 kHz, but decreased after 30 min by abt 6 or 7 kHz, increased again and so on. The transmitter was crystal-controlled, and was thermically quite well isolated in a styrofoam box - so what could be the reason?

But there also were some very positive things to tell: Since we used the local 70 cm repeaters for talk back (and quite a few of them during our long journey, hi), we drew the attention of many OMs to us, or better the balloon. Many of them help us with triangular DF or just told which roads to use and so (how do I get right across through Bielefeld - quite a large city - as fast as possible?). Even some days later, we heard OMs on our local repeater asking what had happened to the balloon, did we recover the payload and so on. That by itself was probably the biggest success of this launch - consider that ballooning is not that popular in Germany as it apparently is in the US.

HAPPY END!
Wednesday morning, Armin (DF1QE) got a phone call! The balloon had been found (by a non-ham) who already had seen this balloon right next to a road he passed on his way to work on monday morning. He finally became curious - so we were lucky!
I almost forgot (not relly, hi): he lives in Krina near Bitterfeld (formerly East Germany), JO62DP. So our balloon travelled a distance of abt 330 km. And the balloon never bursted - this explains why we had the signal for lifting during the whole flight. About ten days later, we got the equipment back (by mail).

Conclusions:

We will never start again on a such a windy day - yes, 14 knots is not that much, but the upper wind normally is twice as much, and that is defintely too fast to follow in an area that does not provide appropriate roads (e.g. leading to the balloon, hi).

Besides that, on every upcoming launch we will add a receiver to the equipment for remote control of a relaese unit for the payload (Guess why?).

Meanwhile, we are happy that we got the payload back (even if its value is limited). We got reception reports even from Bremen - a distance of about 100 km.

Any suggestion or response is always welcome!
Please tell me if you want to be added to our mailing list!

Best 73,
Oliver

Theres a fairly simple solution to this problem, which one of our
local repeaters also encountered. Call the police department (the
folks who administer the 911 system) and describe the fact that you
have a public access phone line, and no repeat NO 911 calls should be
traced to this number. If the call isn't resolvable over the air, the
local system simply drops it from the 911 queue. Problem was solved,
no more late night wake-ups for the repeater owner, we still have 911
access via the repeater.

Seems like the best explanation I have heard regarding the name "Ham". Guess if some one really wanted to check it out they could go to the Congressional Record for the dates listed as well as newspapers of the time. Anyway it sounds good. Hope you enjoy.

WHY RADIO AMATEURS ARE CALLED "HAMS"

From Florida Skip Magazine - 1959 Have you ever wondered why radio amateurs are called "HAMS"? Well, it goes like this: The word "HAM" as applied to 1908 was the station CALL of the first amateur wireless stations operated by some amateurs of the Harvard Radio Club. They were ALBERT S. HYMAN, BOB ALMY and POOGIE MURRAY. At first they called their station "HYMAN-ALMY-MURRAY". Tapping out such a long name in code soon became tiresome and called for a revision. They changed it to "HY-AL-MU", using the first two letters of each of their names. Early in 1901 some confusion resulted between signals from amateur wireless station "HYALMU" and a Mexican ship named "HYALMO". They then decided to use only the first letter of each name, and the station CALL became "HAM". In the early pioneer days of unregulated radio amateur operators picked their own frequency and call-letters. Then, as now, some amateurs had better signals than commercial stations. The resulting interference came to the attention of congressional committees in Washington and Congress gave much time to proposed legislation designed to critically limit amateur radio activity. In 1911, ALBERT HYMAN chose the controversial WIRELESS REGULATION BILL as the topic for his Thesis at Harvard. His instructor insisted that a copy be sent to Senator DAVID I. WALSH, a member of one of the committees hearing the Bill. The Senator was so impressed with the thesis is that he asked HYMAN to appear before the committee. ALBERT HYMAN took the stand and described how the little station was built and

almost cried when he told the crowded committee room that if the BILL went through that they would have to close down the station because they could not afford the license fees and all the other requirements which the BILL imposed on amateur stations. Congressional debate began on the WIRELESS REGULATION BILL and little station "HAM" became the symbol for all the little amateur stations in the country crying to be saved from the menace and greed of the big commercial stations who didn't want them around. The BILL finally got to the floor of Congress and every speaker talked about the "...poor little station HAM". That's how it all started. You will find the whole story in the Congressional Record. Nation-wide publicity associated station "HAM" with amateur radio operators. From that day to this, and probably until the end of time in radio an amateur is a "HAM"

: > Although (thank God) we have few problems in general with people abusing the
: > repeaters in our area but we had to pull the 911 support due to abuse.

: Same thing here in Rhode Island. The autopatch on the 146.70 machine is not
: open but requires a code to activate it. Even with that code people were still
: dialing up 911 and hanging up.

We have solved that dilema by programming the number of the regional highway patrol dispatch center to ring when 911 is dialed as part of an autopatch. The days of * on # off have long passed, the same thing is now happening to 911. Our repeater covers over nine counties as well as three area codes. Chances are the local 911 call would not be able to be transfered to the right agency if they were several counties away.

Before we "mandate" third party 911 calling on amateur radio service repeaters, we might want to review the salient rules of Part 97. The Amateur Radio Service is not a common carrier radio service.

Seems to me a control operator must be present. I don't know of any repeater trustees in major metropolitan areas who are willing to allow anyone who can press 911 on their radio to be an instant control operator.

That comment wasn't needed.

Now that everyone on this thread has or has not read this thread it has raised some great questions as to how to correct and proper training for the 911 communicators. Now ask yourselves: "What can I do to make the system better."

There is major room for improvement. Cut Downs are not the solution to the problem. It just shows that most are uninformed or misinformed or just plain don't care about their fellow man.

At least the Phones haven't started being answered by the local Dunken Doughnut shop yet..

Maybe there is still hope.

There are ways to connect between packet and Internet but in can be very complicated and convoluted. Since your father-in-law already has a computer, since he works packet, the easiest way is to get him on one of the commercial services, AOL, Compuserve, or an Internet service provider. I've been a ham for over 30 years but I have to admit that Internet is even more fascinating.

Bill. You need a beam mounted horizontal (sorry about selling) 8 elements or more. About 40 watts ok but the morer the betterer :-) Monitor 144.200 the ssb call channel. Look around the net or on the web for 2m beacons.

: >be able to dial 911 or *911 to contact the 911 Emergency services and #
: >to end the call.

: My repeaters cover 6 Counties in Metro Atlanta.
: It takes over 50 individual speed dials to allow users to contact the various
: Sheriffs, County Police, City Police, State Patrol and National Park service
: Departments that serve our communities. We cover 3 area codes as well!

: In your " mandate " , who do you suggest we call when 911 is entered? Any
: choice could be as far as 60 miles from the affected area. We don't even
: dial "911" in our home county because the highly intelligent 911 operators
: insist on sending police cars to the address of the repeater (even though
: they are given the correct location of the problem)! We dial the individual
: 10 digit numbers for the 911 equivalent for each area.

: So you see, the idea is good, I agree with you. But repeaters covering large
: Metro areas do have different requirements than repeaters in areas like yours.

: By the way, the Repeater owners have pretty much standardized on ten
: autodial codes that work on most repeaters. 0*0 will almost always get
: you the Atlanta PD, 0*3, the Cobb County Police, etc..

: Ralph Fowler N4NEQ
: Atlanta GA

Yea, add to that the idiots that play with their TT pads. As I recall,
dialing 911 for kicks can lead to jail time and a hefty fine.

Plus it acts as a filter to reduce the amount of trivial calls to
emergency personnel.

Sure, I'll go along with your mandate, I bet the dispatchers at 911 will
love it!

Hello, I will be staying in Margate City, NJ (right up against
Atlantic City) next week. Are there any repeaters I can use
just with an H.T.? I have 2m and 440. I remember there was one
440 machine but I don't recall its frequency.

Thanks!

: We still have developments here in central N.C. that don't have
: restrictions against antennas. You have to get away from the Raleigh/
: Research Triangle area, but you can still be within commuting distance.

How many donuts would you like bearing in mind that I have to packetize
them before I send them to you via the net.. ;-)

: As an ME, that's one of the reasons I took a real estate course
: (only $15 at the local community college) before I bought my house
: 12 years ago. Actually, I took the course 4 years before I bought
: my house, and as I bought and sold some land prior to buying the
: house, it paid for the time and effort overwhelmingly in the real
: estate fees I saved by handling some of the sales myself.

A good idea! But this is to my point also(I don't really think you
were arguing with me ;-) in that most of us are ignorant. A class
on the subject is a pretty good remedy for the situation!

I'm fortunate in having been exposed to this subject pretty
thoroughly when growing up. My dad is a real estate appraiser
and I helped him on weekends to make my spending money. My
grandfather was an agent also, and both of them did general
contracting as well at one time or another. So I've been around
the building/land business as an observer for awhile. As you'd
imagine, there were a lot of calls to Dad when I made the offer
on my first house!

: When I made the offer for the house, it was contingent upon their
: being "no restrictions on outside antennas". I've been a ham since
: I was 13 years old, and a car/home without an antenna is unthinkable!
: Fortunately, this development was out in the boonies (but not so much,
: nowadays) and there was no restrictions on antennas. There WERE
: quite a few other restrictions though, and I'm glad I knew about them
: before purchasing the house.
: I definitely recommend taking a real estate course if you can.

Good idea!

I have built my own controller . And I added that very feature. The
repeater is considered "open" but the phone is "closed". All that is requred
is to fill out a form, read the instructions and sign it. Each amatuer family
is then issued thier own PIN. I still do not allow "911" access, the phone
hangs up as soon as it sees a "91" for the first 2 digits. However, All the
control ops have a code that they can use to bring up the patch that does
allow "911" in addition the 3 min. timer is disabled. Also the controller
senses the local PD number and disables the 3 min timer. Although the 3 min
timer is required by FCC rules, I feel that if you are calling 911 or the
local PD you are handling an emergency situation.

>Go figger.

You have to understand how the RS inventory system works. RS automatically devalues an outdated item for the store manager. These devaluations directly impact the bonus a manager can receive. Too many markdowns, thefts, etc. can cause an inventory loss and thus the amount of money a manager can make.

So when the manager can sell any outdated, devalued inventory item for any money, this can directly impact his bonus. In other words, why would a manager be tempted to sell something old and outdated? Because he can make money doing it. The heck with the unsuspecting buyer!

>in use.

Nope, you miss the point. While it may be true that there are a lot
of Morse capable operators out there, Morse doesn't lend itself to
exchanges of thoughts and ideas very well. It's too slow, and too
tedious to be of much use for anything other than simple stylized
gaming contacts. While the digital modes aren't all that much faster,
type ahead at least allows you to get a thought down before you lose
the thread of the conversation from tedium, and they at least allow
you to multitask and do something else while the mechanics of transmission
proceed. SSB voice is of course more immediate, and has a more tolerable,
though still low, information rate, but it fails easily under harsh
conditions.

There's a sufficient, and growing, number of digital operators out
there now so that there's no need to lack for contacts by ignoring
the Morse operators. As I've mentioned before, it would be impossible
in your ham career to exchange ideas with more than a very limited
subset of all amateurs anyway, so the fact that you can't interoperate
with a number of them is of little consequence.

Gary

I have an interesting event to share.

This morning around 5:00 AM, I was awakened by a heavy rain outside, and thunder in the distance. It's not unusual for me to disconnect my HF rig when a storm is brewing, so lay there waiting until the lightning was about two miles away (counting 1001, 1002... between the lightning and thunder) and then got up and went downstairs to pull the plugs.

My shack is an add-on room with a ceramic tile floor, I have a tower behind the house with a Lightningbolt 2-element 5-band quad antenna 50 feet up a Rohn HDBX-48 tower, with a Ringo Ranger 2-meter omni on a sidearm, and a G5RV center support on the other side. The tower is grounded with one rod at the base, and all equipment in the shack is grounded to another rod outside the house. The quad and the G5RV are switched through an MFJ-1701 6-position coax switch to an FT-890/AT HF rig. The tower is surrounded by trees that are about 70 feet tall. (OK, I like free-standing towers.)

I toyed with the idea of using gloves to disconnect the cable to the rig by unscrewing the PL-259 from the Common connection to the coax switch. But I decided not to because (1) the closest lightning strike was two miles away, (2) the lightning strikes were about a minute apart, (3) unscrewing PL-259s with gloves on isn't fun, (4) the tower is grounded, (5) every piece of equipment in the shack is grounded, (6) I was tired and wanted to get back to bed, (7) unscrewing the connector would take only about 5 seconds, (8) a layer of cloth isn't going to stop a lightning bolt.

Figuring I'd at least use the "one hand" rule, I put my right hand behind my back, unscrewed the PL-259 with my left hand, with my hand resting on the switch box, I pushed the PL-259 off the switch box with my finger tips, and at that moment, ZAP!, there was a flash of light (no sound), and I got a respectable shock in my arm. It felt like about 100 to 200 volts DC. (Years ago I got a 350 VDC shock, and I still remember what that felt like.) I was shocked in more ways than one. I thought "How could there be a short? Everything's turned off!" Two seconds later I heard thunder.

It was apparent that I had been hit not by lightning, but with an Electro-Magnetic Pulse (EMP) like I've read about when A-bombs go off. My next thought was "YOU IDIOT!!! You're lucky you weren't killed! They don't let extra-class hams into heaven if they die by electrocution!" But I've never heard of anyone getting shocked by EMP!

Looking back on this episode, I considered something. No conductive part of the quad antenna is closer than about six feet from the tower. The spreaders are made of fiberglass. The shield on the cable running to the quad antenna is not grounded at the antenna; it goes to a balun out on the loop, so if the quad gets hit with an EMP (or lightning), there's no place for the charge to go but down the coax to the switch box, through my hand if necessary, to the grounded equipment in the shack. Wow!

Life is dangerous.

From: P22407@email.mot.com
Message-ID: <1995Aug8.192602.26489@schbbs.mot.com>
Source record: 240929

Greetings!

I just aquired an Alinco DJ-F1T HT and would like to get into the Ham Hobby. I have a couple of questions:

1) Does anyone know of when the next exams for a licence in the Phoenix area are? I contacted one club and they knew of a place where exams are given the first weekend of each month, but I just missed August and there is no exam over labor day. This would mean the earliest I could get a licence would be Halloween!

2) Is there a such a thing as a on-line repeater directory? It could be in PC, Mac, or Unix format as I have access to all three. The ARRL directory is nice, but I would like it in a format I can manipulate for planning trips.

3) Any opinions or hints about this radio would be apreciated. I got it at such a screaming price that I could not pass it up (an impulse buy, which I usually NEVER do).

Any help would be great. Thanks.

You'd also have to consider the case that an individual might have multiple radios that they use to access said repeater. Sounds like this kind of access control would become an administrative nightmare.

Some of the repeaters around here have digital access. That would do what you want, but it's probably expensive.

: of Morse capable operators out there, Morse doesn't lend itself to
: exchanges of thoughts and ideas very well. It's too slow, and too
: tedious to be of much use for anything other than simple stylized
: gaming contacts.

What you are describing is Morse at 13 wpm and slower. The effective
difference between the average ham's typing speed and medium speed
Morse (20-30 wpm) is negligible. Morse proficient hams do indeed
exchange thoughts and ideas quite well. Morse is only "tedious" if
the operator is not proficient...or if one is clunking along at 10 wpm.
Your stereotypic description of Morse being of no use except for
"simple stylized gaming contacts" shows an apparent ignorance of
actual Morse operation...and it's about as valid as someone saying
that all packet is good for is attracting crickets.

: While the digital modes aren't all that much faster,

Most of the words uttered on voice modes are superfluous. The same
thoughts and ideas can distilled down and sent efficiently with Morse
(or digital modes). Much of what you hear on voice is the result of
people's brains not being able to keep up with their mouths. Morse
gives you time to think of things worth saying. :-)

: There's a sufficient, and growing, number of digital operators out
: there now so that there's no need to lack for contacts by ignoring
: the Morse operators. As I've mentioned before, it would be impossible
: in your ham career to exchange ideas with more than a very limited

: subset of all amateurs anyway, so the fact that you can't interoperate
: with a number of them is of little consequence.

It would seem to be much more in keeping with the spirit of Amateur Radio to draw your "subset" from the entire pool of world-wide hams. As _I've_ said before, the fact that you have a sufficient number of digital hams to talk with is a poor justification for virtually excluding the vast majority of hams in the world who do not have modern digital capabilities. You have always spoken against "class divisions" in ham radio, and yet if we as American hams were to ignore such an internationally accessible, widespread and popular mode as Morse, we would be going a long way towards dividing the ham world into two classes: the "haves" and the "have-nots".

That could be done with having just one code, too.

The problem I see with this suggestion is that there will be that many more possibilities for someone out there screwing around punching buttons. Sooner or later someone is going to hit upon a correct combination and when there are so many to choose from, it is going to happen sooner.

I think you should take a look at nic.funet.fi in the directory pub/ham and subdirectories, the best one of them all in my opinion. There is plenty of amateur radio related programs for different platforms, UNIX, Macintosh, PC etc. Everything is updated as soon as there are new versions available, which is not always the case on the other sites.

"Marine" and "Deep Cycle" is an oxymoron. Marine batteries hare starting batteries built to higher physical standards and capacity. They're still built for short period, high current starting loads.

A deep cycle battery has thicker plates, lower maximum discharge rate, and is designed for long periods of discharge.

Trojan Battery Co. has two batteries that might suit your purpose better. One is a 250 Ampere hour 12 volt one, and the other is a 350 A/hr 6 volt battery used in series pairs for 12 volts.

Trojan Battery Company

WarrenRing (ring@porky.cb.att.com) wrote:
[snip]
: If you think tests are hard now, ask someone near you who's held
: a license for 20 years what it was like before the VECs were created.

After many years (27, to be exact) of sitting on Advanced Class, I have made it a priority to make the ultimate upgrade by the end of the year. As a young high-school senior I made the 60-mile trip to Detroit to take the exam for General. During the code test, workers were tearing out the back wall of the office. The examiner brushed off the suggestion that noise was a problem, saying that we'd have rough copy on the air, so we'd better get accustomed to it. Those who didn't pass the code test got the boot - no chance even to see the theory exam. Plus, they were out the fee ($8 as I recall, not a trivial amount in the '60s) and couldn't test again - anywhere - for 30 days.

There were so many more stresses back then to make the examinee even more nervous. The FCC examiners had about the sense of humor of an IRS agent. Since it was necessary to appear at an FCC Field Office, that meant up to a 150-mile trip, one way. Many prospective hams didn't have the advantage of the high school education that we take for granted today, so the algebra needed for the General was a killer for many. If the code didn't get 'em, the theory would.

When incentive licensing came about, and the Advanced Class ticket was introduced, I once again made the trek to Detroit, this time as a second-year college student. A couple of my buddies went along for the test. I didn't really feel prepared for the test, but was under time pressure to test during the summer break, because in the fall i was transferring out-of-state to a four-year university, and would be even farther from an FCC Field Office. By the grace of the gods of radio, I was the only one of the three who passed.

There was also no immediate notification of success or failure, on the theory exams. Word would come from Gettysburg, and it might take 2-3 weeks just to get a notice of failure. There was no online access to the FCC calsign data, and it was necessary to have ticket in hand to begin operation, with new or upgraded frequency priviliges.

I'm convinced that the General exam was a lot harder then, too. While there were books available to teach theory, and sample questions were included, there was no question pool where the questions and answers were available verbatim. You could expect to have equations and values rearranged, so it was an absolute necessity to know the theory cold.

By comparison, I expect the Extra exam to be a piece of cake. But, since our club holds VE testing, I have to do well, or I'll never hear the end of it from my "Extra" buddies who have been urging me on...including one old timer who used to work for me as an electronics technician/installer years ago, before I took the career path to software.

As treasurer of our club, one of my duties is to collect the VE testing fee. While I don't sit in on the exam sessions, I have the advantage of seeing how the system works. The members of our VE team have urged me to become a VE, but that's going to take a back seat to the upgrade to Extra.

I hope this gives everyone a bit of perspective and, hopefully, my historical recall is correct.

I once helped our general contractor/neighbor build a house (1970). Prior
to the cement foundation being poured we tied all the rebar together
using galvanized bailing wire. I hope you're not refering to that as
being ``electrically tied together''. The rebar has a layer of oxidation
on it that certainly will *not* offer a low resistance path.

Hello... I guess all these amateur radio groups I've been lookin in meant Ham.
Anyway, point is I would like to get my hands on, or build, modify, etc... a transmitter that'll pump out in the commercial FM band... moderate range, 10 miles er so.
If anyone knows where I can get a schematic(sp?) to build one, or specs for
making another transmitter work, could ya e-mail me?
I've been trying for years to build one from a schematic I had, but some of the components were difficult to find.
I believe it's illegal to own one, but I'm only after the KNOWLEDGE. I don't think thats illegal.
Thats what I thought FELONS - EX and OTHERWISE meant! Hehehe...

Email me at Doug.VanEs@alonebbs.gryn.org
I'd REALLY appreciate the help.....

Mushmouth in Canada....

>KE6GXD

I'm a VE.

The VE team may have wanted to save trees by examining her copy before handing her the 10-question exam. Once it was found that she passed on perfect copy, the 10-question exam was unnecessary. One VE team leader here doesn't allow changes to copy after the 10-question exam is handed out; he believes that the wording in the questions might assist in correcting copy. Personally, I don't subscribe to that idea, but it's up to the leader. If she had failed the code, they would have been required to give her the 10-question exam.

The content of the CW message is up to the VE team. Usually they use message tapes supplied by their VEC (sponoring organization, ie. ARRL, W5YI...), but they don't have to. I was helping at a test session last Saturday, and was listening to the CW during the test, and heard "...TS-950 running 450 watts...". Nobody runs 450 watts without an external amplifier. The message also said the weather was hot - 76 degrees! The message doesn't have to make sense. In fact, legally it could be random characters. It just has to contain at least one each of all characters and prosigns.

You got to read her copy after the test??? That would be irregular. VE teams are instructed to tell only how many characters of perfect copy were found, or how many test questions were answered correctly. They are admonished by their VEC to avoid going any further than that (except to tell whether or not you passed).

VE teams aren't out to get people. Actually, they want to see as many people as possible pass, as it helps justify our use of precious spectrum if more people use it. People taking the test usually feel

a lot of pressure, but she shouldn't assume the VE team is out to get her. If you think tests are hard now, ask someone near you who's held a license for 20 years what it was like before the VECs were created. It may be a good idea to take the next exam from another team, if it's close by. Good luck.

If you can afford it, yes. You may find that your favorite repeater
there is crossed-linked into other bands (440 MHz), and you can monitor
that repeater on the other band while poking around on 2 meters. That
way you won't miss any of your calls. Also, some repeaters are 440 only.

Get the drop-in charger and mag mount antenna, too, if you can. If
you don't have that much money, you can defer those purchases until
later. At least get the right radio.

Hope this helps.

To say something on this subject, I refer back to Pouplar Science July 1995, issue in I believe the WHATS NEW DEPT. Cellular phone companies have the same problems as hams when erecting antenna towers, so one company cleverly disguised the tower to look like a tree, and it does look like a tree in the photo! I wonder if enough hams wrote, or called them that they might diversify into ham towers??? Might be an alternative neighborhoods could live with.

Can't say for sure, but if I were a shop shipping a $2000 HF rig, I would definitely want to make sure it was insured to the hilt. I've seen enough munched UPS packages come through our warehouse door. Also, the mail order dealer has to pay someone to package that puppy so it can resist shipping gorillas. Boxes aren't cheap, either. If the mail order shop has lowered their margin on items enough to make the average ham only grumble a little bit about how expensive these rice boxes are, he probably can't really afford to absorb all the shipping expense.

you ever considered the fact that there are many happy and loyal
customers to each manufacturer? These are usually the patient folks
who don't need replies in an instant and they don't fly off the handle
when they don't receive an immediate reply.

:>Now, my question to all of you: Is Ten Tec or Icom (US stuff) any
:>better??? I also have found Yaesu to stink..

sniff, sniff...
Hmmmm. My Yaesu stuff doesn't smell. Must've been from a good batch.

:>I'm their profit, and they're the overhead...I really don't think
:>they understand how pissed off I am!

Have you ever noticed that the more pissed off you are the more you
badmouth whomever you are pissed at and that it doesn't make the
situation any better? Did you ever try to call the dealer you bought
the radio from first?

That overhead may have been too busy to answer the phone. Sometimes
it can get rather busy in-house and the phones may be placed on the
back burner...

Well...it's just a thought.

Hey, when amateur radio quits being fun, find another hobby.

Cheers!

2476. Looking for historical radio messages

Newsgroup: rec.radio.amateur.misc
Date: 1995-08-09 00:00:00 UTC
From: rdkeys@unity.ncsu.edu

I am looking for the text of some historical radio messages that
were sent in the WWII era.

A good frine of mine, and a fine Amateur Radio operator, who
was the operator in Burma, running his beloved BC-191 out in the
jungles at the edge of a remote P-51 fighter base (I even have a pic
of him in the tent manning the beast) received the plain text message
of the demise of President Roosevelt. Does anyone by a long stretch
of the imagination have a copy of that anywhere? This opr copied it
fresh for the CO and then trashed the original as-received copy. It
would be neat to pass this along to him after 50 years.

Also, does anyone have a copy of the final capitulation of Japan
message sent at the close of the war?

Also, does anyone have copy of the declaration of war message sent
over the same circuits in 1941? Strangely, I can't seem to find
a copy of these in any of the history books of the military govdocs.
They would have been sent to everyone of any importance, and should
